

Our newly developed rule edge protection rubber is principally used within the die making department supplying manufactured cutting blades to the VAC FORMING/THERMO FORMING sectors.

The rule edge protection rubber is easily applied to the sharp edge of the cutting blades, covering the whole bevel geometry, it will prevent nicks or damage to the cutting edge of the blades during storage and during any internal/external transportation process.

The rubber also provides protection against injury and over-exposure to the elements.

This product ensures the longevity and optimum performance of your cutting blades whilst in and out of storage.

The rule edge protection rubber is supplied on 50 metre reels.

Order code: RURULEPROTECT

## MultiSNIP CUTTERS

New MultiSNIP Cutters offer a powerful cutting application on various substrates including DIE EJECTION RUBBERS.  
Order code: YRUBBERCUTTER
