# Transcendence

otherworldly reverb

Transcend to a higher realm!

*The Transcendence is a unique take on a modulated reverb using granular synthesis, random-lfo modulated step-filters and lofi/bitcrush madness.*

At its heart the Transcendence is a lush ambient reverb capable of creating cave-like ambiences, huge washes of Shoegazey reverb as well as subtle and tasteful room-emulations! What really sets it apart from other reverbs is the possibility to blend in three otherworldly types of modulation that you won't find in any other pedal:

- nova adds a shimmery octave-up to the tails while reducing the bit-depth of the reverb resulting in an interesting LoFi-shimmer or fully distorted bitcrush-reverb.

- s/h makes use of a sample&hold controlled step-sequenced filter that adds random bleeps and bloops to your signal while always retaining a lush reverb sound underneath: imagine a group of robots singing along to your melodies under water or the sound of resonating crystals in a stalagmite cave!

- collapse makes use of granular synthesis and puts random chunks of your signal through a mix of aliasing, ringmodulation and a lower octave resulting in sounds that feel like they're transcending from another dimension.

It's powerful control-set allows you to dial in endlessly decaying reverbs, fully wet drones as well as subtle nuances of classic ambient reverbs. Add in the modulations with the effect-control which can also be replaced with an expression pedal. Momentary ramp-functions allow for infinite reverbs as well as extreme modulations with the press of a button! You can further tweak the reverb tails by darkening it with the dampen control or create unique sounds through the fx-loop. The possibilities are endless - especially for such a small box!

If that's not enough for you we also added a level control making the pedal capable of boosting or attenuating your signal, a switchable trails/spill-over function and of course our smart-relay system that allows for momentary use if you only want reverb on certain phrases or create background washes with higher decay-settings and activated trails.

Transcend to a higher realm with our Transcendence!
