## GLUE SNIFFER

**Type:** Sativa Dominant  
Regular Seeds

**Lineage:** GG4 (F) x  
GG4 X The Whip! (M)

**Yield:** High

**Flower Time:** 6-8 Weeks

Glue Sniffer is our take on GG4. It's bigger, it's louder, it's more frosty, it's more gassy, and much more hardy. We started by crossing GG4 with a choice male of one of our flagship strains called The Whip!. We then spent the next few years selectively breeding the offspring with the original GG4. Each time, we went for more trichomes and more gas. The results are amazing.

### Notes From the Head Grower:

This strain will produce record breaking outdoor plants. Multiple reports from the 2018 growing season reported some of the largest plants ever grown. She is super mold resistant and very hardy in cold climates. She is also a stellar choice for indoor growing.

### Notes from the Breeder:

We spent a lot of time and energy crafting Glue Sniffer. She is an absolute joy to grow and she is an exceptionally good choice to use in your breeding program. If you are looking for vigor, trichomes, and gas this would be our first choice.

## **SFVOG BX5**

**Type:** Indica Dominant

Regular Seeds

**Lineage:** OG Kush Family

**Yield:** Average

**Flower Time:** 9-10 Weeks

Aficionados and growers alike love one of the most renowned cultivars in the OG Kush family, SFVOG. She is pure gas, no fruit, and straight to the head goodness. This strain is easy to grow and adapts well to many different soil conditions, substrates, and climates.

### **Notes From the Head Grower:**

LET HER FINISH! She gains most of her weight and density the last few weeks. Keep her well fed, she likes lots of fertilizer and water. Keep the bottoms cleaned up for best results. SFVOG is a tall and lanky strain and one of the biggest downfalls is her extreme brittleness. Branches must be well secured in order to minimize breakage. Although typically grown indoors, SFVOG is also a great strain to choose in a light deprivation environment. She fills out best in full sun with long summer nights.

### **Notes from the Breeder:**

SFVOG is not an easy strain to use in your breeding program. Stabilizing this strain was particularly difficult for us. The gaseous terpenes found in SFVOG are not a dominant trait and can easily be lost or diminished without very tedious selective breeding. This cultivar was sourced in Humboldt County in 2011. We have selectively backcrossed our SFVOG for five generations (Bx5). We focused on improving the yield and terpene profile. The genetics in our seeds are extremely stable and very little variance will be noticed between plants.

## MENDO COOKIES

**Type:** Indica Dominant  
Regular Seeds

**Lineage:** GSC (F) x Mendo  
Cookies F5 (GSC x The Whip!  
X Sour Snow) (M)

**Yield:** Average

**Flower Time:** 9-10 Weeks

A direct descendant of the original GSC, The Mendo Cookies is nothing short of phenomenal. She is quite the looker with perfect purple hues and absolute ridiculous resin production. She reeks of baked goods dipped in kerosene with a slight coffee finish. We crafted this version of GSC by carefully selectively breeding our original cultivar for 5+ generations (F5) then backcrossing it with a clone from the original cultivar. The ancestral male started with two of our most sought after strains, The Whip! And Sour Snow. The original GSC was sourced at HPRC (Humboldt Patient Resource Center) in Arcata, CA in 2010 from a rather infamous cultivar that is still available today.

### Notes From the Head Grower:

GSC is a great strain to grow both indoor and outdoor. If grown outdoors, she will thrive much better using light deprivation techniques. Although full term GSC is very achievable, the purple hues can come on very strong when the night-time temperatures drop in the fall.

### Notes from the Breeder:

Her perfect traits are so dominant she makes one of the best breeders we have ever found. Choose a good Mendo Cookies male and cross this with your favorite strain and rest assured you will find a winner.

### **COOKIE DOUGH ICE CREAM**

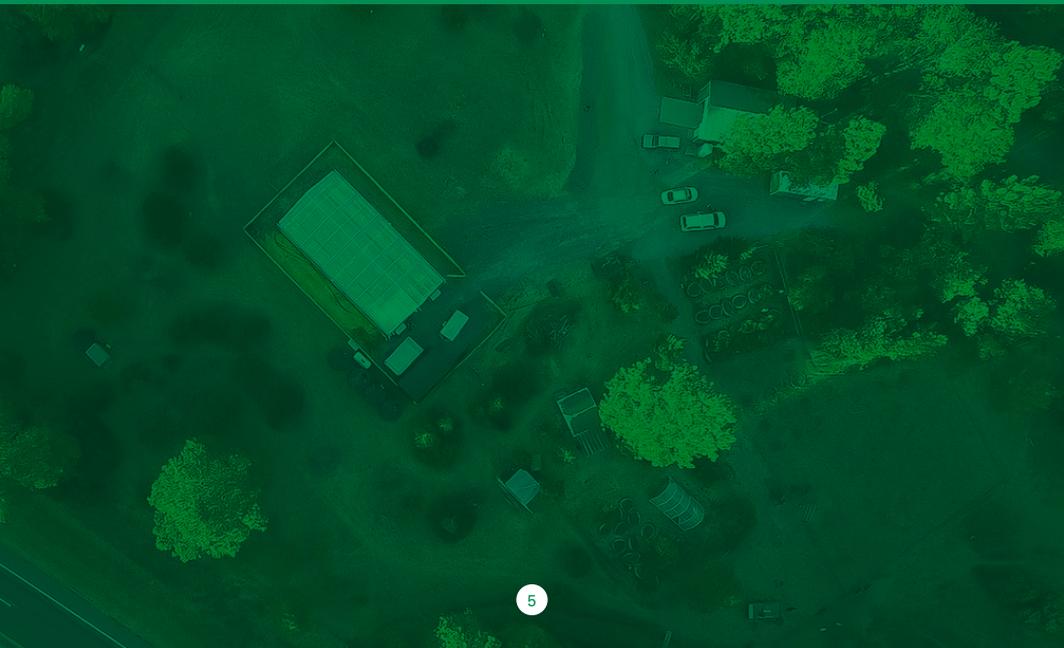

**Type:** Indica Dominant  
Regular Seeds

**Lineage:** Gelato #33 (F) x  
Mendo Cookies (M)

**Yield:** Average

**Flower Time:** 9-10 Weeks

This is a limited F1 release of our famous Mendo Cookies X Gelato #33. Perfect blend of fruit, citrus, and gas. This strain has a beautiful purple hue and neon orange hairs. She resembles cookies visually but takes on the smell and taste of the Gelato.

## **BAD GIRL**

**Type :** Indica Dominant  
Regular Seeds

**Lineage:** GSC (F) xThe Whip!  
Bx4 (M)

**Yield:** High

**Flower Time:** 7-9 Weeks

Bad Girl is the perfect marriage between a heavy hitting kush and the classic GSC. She carries an extremely deep, rich, earthy kush flavor reminiscent of Master Kush but also reeks of jet fuel and mentholatum. She's a photogenic beauty and usually steals all of the attention in the garden.

### **Notes From the Head Grower:**

Bad Girl has quickly become one of our favorites in the garden. Compared to most other GSC strains, her yield exceptional. She is tall and stout and doesn't have any obvious negative sensitivities to nutrients. She stretches well into flower and the typically has useable flowers from the bottom nodes all the way to the top!

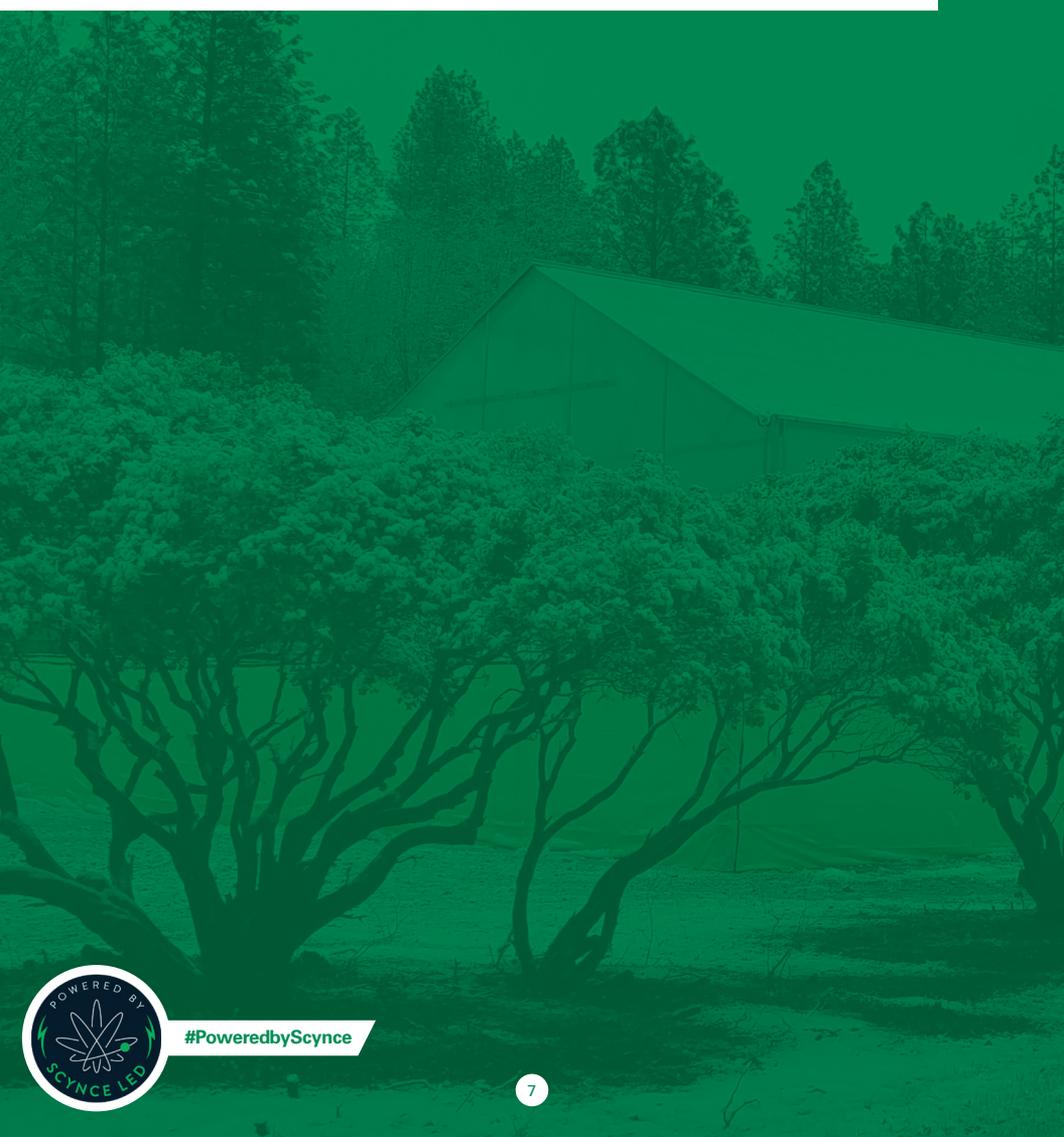

### **Notes from the Breeder:**

Bad Girl is the love child of some of our favorite strains. Her father was a 4th generation backcross (Bx) of The Whip!. The Whip! Is a cross of Island Mt Strawberry Kush and Sour Snow. Her Mother is an absolute phenomenal cut of GSC we obtained from our good friends and veteran breeders at HumboldtDNA.

## New F1 Releases

In the process of developing new strains we are constantly creating unique hybrids from some of our favorite cultivars. We carefully choose our breeders based on traits we are trying to blend or accentuate. The process is long and tedious but the fruits of our labor are always worth the effort. The following “pheno hunter special” seeds are available in very limited quantities.

## SHOTGUN WEDDING

**Type:** Indica Dominant  
Regular Seeds

**Lineage:** Wedding Cake(F)  
x Mendo Cookies (M)

**Yield:** Average

**Flower Time:** 7-9 Weeks

A cookies dominant strain, Shotgun Wedding is a prolific, high yielding hybrid with great terpene profile. This strain is easy to grow and the plants tend to get quite large, expect purple phenos throughout, with dense, frosty nugs. This and the Bad Girl are our biggest yielding cookie crosses.

## WOOK STOMPER

**Type:** Hybrid Regular Seeds

**Lineage:** Sour Snow (F) x  
Mendo Cookies (M)

**Yield:** High

**Flower Time:** 7-9 Weeks

Wook Stomper is part of our Hybrid F1 Line. We bred two of our flagship strains together to make this hybrid beauty. The Mother is one of our most coveted strains, the Sour Snow. Sour Snow is an ultra potent sativa dominant hybrid that we have been selectively breeding in Mendocino County for over 15 years.

She has a big list of ancestors but the dominant genetics are Humboldt Snow and Sour Diesel. She is super gassy, super frosty, and in almost all regards one of the easiest strains to grow. Her THC Potency has been known to reach the low 30%'s The Father is one of our flagship strains, Mendo Cookies (see in previous description).

### HAIR OF THE DOG

**Type:** Sativa Dominant  
Regular Seeds

**Lineage:** Mimosa (F) x  
Glue Sniffer (M)

**Yield:** High

**Flower Time:** 7-9 Weeks

Hair of the Dog is a blend of two huge yielding, heavy hitting sativas! We crossed our infamous Glue Sniffer (M) with an extremely frosty Mimosa female we have used in production for the recreational flower market. Expect heavy, frosted nuggets and some quick finishers. Both of the parents are well suited for outdoor cultivation and produce massive, hardy plants.

### GAS BREATH

**Type:** Hybrid Regular Seeds

**Lineage:** Mendo Breath (F)  
x Glue Sniffer (M)

**Yield:** High

**Flower Time:** 7-9 Weeks

Gas Breath is the perfect marriage of two heavy hitting strains. We crossed our infamous Glue Sniffer male with one of our favorite flower production strains, Mendo Breath. Expect a great yield with phenos varying from green to purple with a loud nose with some finishing under 8 weeks.

## NOSE CANDY

**Type:** Hybrid Regular Seeds

**Lineage:** White Tahoe

Cookies (F) x Glue Sniffer (M)

**Yield:** Average

**Flower Time:** 8-10 Weeks

Nose Candy is a perfect blend of form and function. We took one of our favorite breeders, Glue Sniffer (M) and crossed him with one of the most potent and photogenic cookie strains, White Tahoe Cookies (F). Seeds are available in very limited quantities.
