Data for Children Collaborative WITH UNICEF

Webinar Summary

The Impacts of COVID-19 on Children: Let's Talk Data

We asked:
What are the research questions we should address next?
How do we address the data gaps?

DIGITAL EXCLUSION

How do we represent those without digital access?

How do we carefully consider the communities and individuals who may not want to be reached?

DATA LINKAGES

How can we ensure different data catalogues work together effectively?

How can we communicate the types of data linkage exercises that are, and are not, possible?

CHILD POVERTY

How is COVID-19 affecting absolute and relative poverty?

Which areas do not have sufficient data to make meaningful insights? (E.g. children in the care system)

CHILDREN'S RIGHTS

How do we create coherence across a variety of frameworks? (E.g. Convention on the Rights of the Child, National Performance Frameworks)

Are current data collection methods representative across a variety of vulnerable groups?

RECOVERING FROM THE PANDEMIC

How could this information help to steer a recovery plan?

How do services need to adapt in light of this research?

MAKING USE OF EXISTING DATA

How can we work to facilitate better access to, and awareness of, existing data?

Should we be looking to store more data in Safe Haven settings?
