Chenin Blanc 12-Step Program

1. Open it.

2. Check temp.

55-65°F is a good starting temperature.

About 4 inches of headspace is the normal volume of juice.

Clean/Sanitize Everything
3 Transfer. Mix in all the sediment! 1-3 Days

Combine all three ingredients then wait 15 minutes.

+ 6 grams GoFerm
+ 125 ml h2o @ 104F
+ 3-6 grams wine yeast
+ 6 grams GoFerm

4 Rehydrate Yeast.

Combine all three ingredients then wait 15 minutes.

+ 125 ml h2o @ 104F
+ 3-6 grams wine yeast
+ 6 grams GoFerm
4 Contd. + 60 ml juice

Mix in 60 ml juice, wait 15 minutes add another 60 ml juice, wait 15 minutes and then pitch yeast.

5 Nutrients.

Add 3 grams yeast nutrient dissolved in 75 ml water 12-24 hours after pitching yeast. Then wait 2-3 more days before adding another 3 grams of nutrient dissolved in water.

6 Fermentation.

Fermentation should occur between 50 and 65°F and last 1-3 weeks. The fermenting juice should smell clean with lots of tropical and citrus aromas.
7 Rack to Glass. 
Near the end of primary fermentation...

It Flows, It Goes

8 Sulfur it. Add 3-4 crushed Camden tablets to get about 30-ppm free SO₂

9 Top it. Keep it that way.
Don’t let headspace turn good wine bad. Too much oxygen exposure is the most common cause of spoiled wine and is also the easiest to avoid!
10 Battonage. Weeks 2-12

Use a racking cane to stir up the lees twice a week for two months.

Before

After

After two months of lees stirring, let it settle for two weeks.

11 Bentonite. Month 3

No clumps!

Use your hand to fully dissolve 2.5 grams of bentonite in 100 ml of hot water.

Slowly pour it.
12a  Buy Another Bucket.

Your carboy will be empty soon - www.winegrapesdirect.com

12b  Bottle.

2 weeks after bentonite addition, wine should be clear and ready!

Bottle the bottom 2-3 inches separately to keep wine clean.
