TeachUNITED Monitoring and Evaluation

TeachUNITED is committed to serving teachers and students across the globe and to ensuring that our support has a meaningful impact on student and educator success. From the beginning of our work, we have applied a rigorous monitoring and evaluation process as a key component of our work with partners to demonstrate impact and efficacy.

Our Success
After completing the program, TeachUNITED school communities across North America, Latin America and East Africa consistently report meaningful increases in student academic outcomes, as well as teacher skills and engagement:

- Students in Costa Rica showed an average growth of 12% in school pass rates.
- In Tanzania, secondary school national exam promotion rates increased by 74% for all students, and nearly 200% for girls, meaning more students are able to move to higher level education.
- In the United States, students at TeachUNITED schools achieved 115% of expected growth on standardized assessments.

What a Rigorous M&E Process Looks Like in our Program

**Agreed Upon from the Beginning:** We work with our partner schools and organizations to decide what assessments, metrics, and measures of success are most important. We make sure we are collecting the data that really matters.

**Embedded and Scheduled:** Our assessments and data collection are built into the program. Our M&E team and coaches work closely with district and school data contacts to gather data on the schedule that works best for your teachers and students.

**Multiple Levels of Data:** We collect teacher and student data in multiple forms, allowing schools to track measurable outcomes for their entire community.

**Sharing Results:** When data are collected and analyzed, we share results with our partner districts and schools so everyone can learn together from the results.

What We Measure and Why
As part of our partnerships with schools, districts, and educators, we collect data from multiple sources to ensure measurable success for students. Below is a partial list of sources of data we collect and their use.

- **Student performance on standardized assessments:** Compare TeachUNITED students with students from non-TeachUNITED schools
- **Student TU assessments in math and literacy (International):** Measure student growth through program
- **Student engagement and attendance:** Track student involvement and participation in learning
- **Teacher surveys on practices and perceptions:** Measure teacher changes in beliefs and behaviors throughout the program, as well as teacher satisfaction
- **Observation and measurement of teaching practices:** Demonstrate actual changes in teacher practices in the classroom.
