

Against The Clock: Towards Climate Justice in Mobility Our work on climate migration

Climate Advocacy in Practice

Climate-Induced Displacement in Cities

IOM: Identifying Climate Adaptive Solutions to Displacement in Somalia (2021)

1. Investing in **multi-stakeholder partnerships** in the form of **Participatory exercises** with governmental counterparts, development partners, diaspora and community representatives help **integrate local perspectives**.

study

- **1.** Women favour longer-term strategies such as planting trees over shorter-term measures such as raising the level of the house or migration.
- 1. There is a **need to link migration governance, environmental sustainability and urbanisation** under the same framework. Read <u>here.</u>

GCCMI: Understanding Climate Mobility Dynamics in the Greater Caribbean

The intensification of extreme weather events has affected livelihoods and strained Caribbean economies, leading to increased internal and intra-regional displacement, as well as out migration.

Samuel Hall is working closely with Greater Caribbean Climate Mobility (GCCMI):

- To complement the development of the Greater Caribbean Climate Mobility Model through data collection in frontline communities.
- **To better understand the full range of mobility outcomes for populations** living in the Greater Caribbean region and who are affected by climate change.

Facilitating Dialogue Through Our Annual Lecture *Cities, Migration & Climate Change*

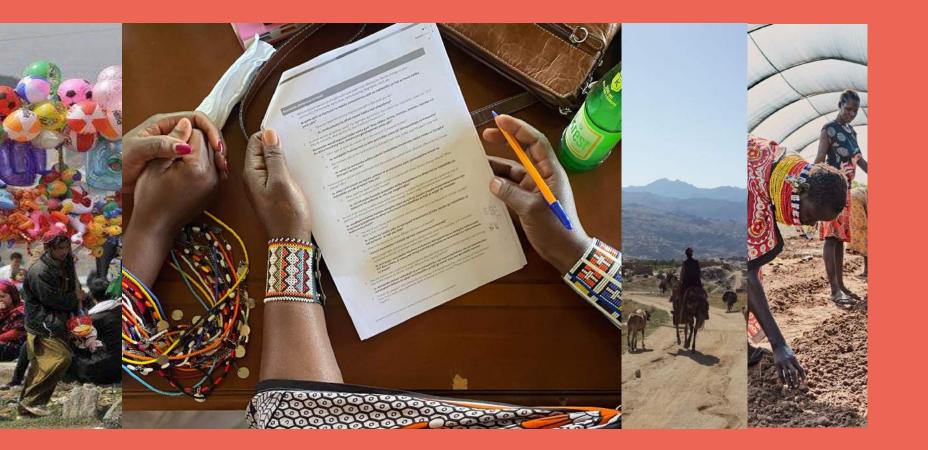

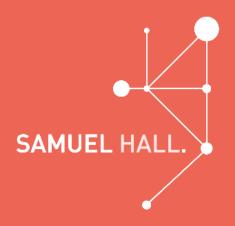

We brought East Africa and South Asia
into the conversation in our inaugural
annual lecture, a collaboration between
Samuel Hall, the Aga Khan University
Graduate School of Media and
Communications, Institute for the Study
of Muslim Civilisations (AKU-ISMC).

SAMUEL HALL

The themes related to extreme heat impact on urban dwellers, including migrants, prompted us to think about the role of urban planning to build sustainable cities and environments that are inclusive of migrants and of responses to thermal (in)justice.

For more information about the event, read <u>here</u>

Participatory & Inclusive Climate Action

Protracted Displacement in an Urban World project Connecting the dots through our participatory forums

Led by **International Institute for Environment and Development** (IIED) with 10 partners, including Samuel Hall; the research project seeks to:

- Raise awareness of unmet needs and economic contributions of refugees and internally displaced people.
- Support municipal authorities and other local actors to use participatory planning to **co-produce innovative and inclusive solutions** for forced displacement in cities.

Enhancing urban planning starting with a greener city and dedicated spaces for youth and women - a consensus point reached at the Jalalabad and Addis participatory forums

City expansion plans are urgently needed as informal settlements require upgrading.

A greener and cleaner city is among the first priorities for integration and inclusion in cities with displaced communities

Read the full city notes here: Addis & Jalalabad

Collective Action for Climate, Mobility and Gender Justice

Engagement on the Nexus between Gender, Climate Change and

Mobility

Samuel Hall collaborated with the UNDP Resilience Hub with the aim of understanding and supporting women's perspectives and leadership on climate change and mobility in Africa.

We will start a **feminist coalition building exercise (FCBE)** to establish a feminist coalition of African research networks, NGOs, activists, entrepreneurs, experts, RLOs, and more to address barriers to human development of women and other groups in vulnerable situations in relation to climate and mobility on the African continent.

The changes have made women stronger as now they contribute to daily income generation to the family and also, they give better advice to their spouses on ways to cope with climate changes." -Kenya Men FGD

SAMUEL HA

Research Questions and Dimensions

Cultural How do societies' culture, norms and values influence women's responses to climate change?	Economic What are the economic implications of climate change for women?	Political What forms of collective action and women's engagement can be built on and envisioned?	
What are the ba	What are the barriers, enablers, and entry points to influence change?		

INSIGHT: Understanding the Climate-Mobility-Gender Nexus

- Climate Change and Mobility is not gender-neutral.
- Women take on new roles at all stages of climate-related mobility.
- Women's and men's role in adaptation differs due to cultural norms, gender roles and limitations to their political representation
- However, they also allow women to re-negotiate gender roles in their household and community.

 Our research with UNDP, IOM & UNEP in Africa showed a significantly higher level of awareness among women on community level solutions.

SAMUEL HALL.

- Women are more aware of strategies that are **locally** adaptive and using that information can help **build** community resilience.
- We need to focus on the **integration of a gender perspective** into climate change adaptation and mitigation strategies.
- Recognising and addressing the unique vulnerabilities and capacities of women including their knowledge on adaptation is critical

Local Response to Climate, Mobility & Habitability

IOM: Unpacking the Realities of Displacement Affected Communities in Afghanistan

SAMUEL HALL.

In 2022, Samuel Hall was commissioned by IOM Afghanistan to produce research briefs on the impact of climate change especially on displacement-affected communities since August 2021.

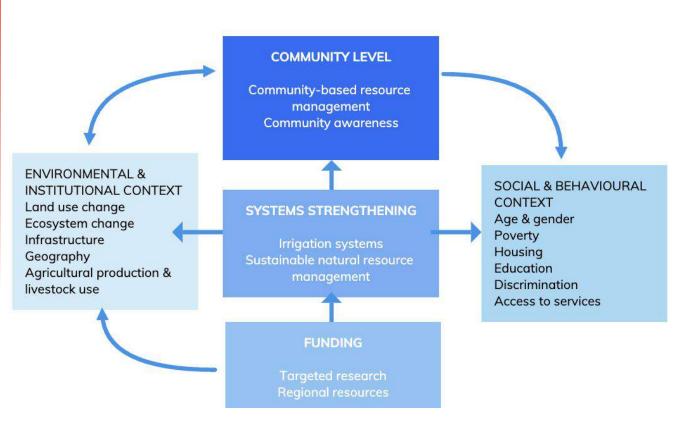

Read our research brief <u>here</u>

"First, it was economic factors that forced me to migrate from Behsud district to Kabul. Second, it was the lack of natural resources, such as water. If natural resources were not in scarcity, we would not migrate at an old age. – SSI5, Male IDP, Kabul

Recommendations for durable solutions to mitigate the impact of climate change on displaced communities

University of Liége – Linking Climate Change, Habitability, and Social Tipping Points: Scenarios for Climate Migration (HABITABLE) (2020 - 2024)

The project aims at significantly advancing our **understanding of the current interlinkages between climate change impacts and migration and displacement patterns**, and to better anticipate their future evolution.

It does so through the **mobilisation of innovative methods**, implemented by a **diverse, experienced consortium associating 21 partners** representing a number of regions of the world from **West Africa, East Africa, South Africa** and **Southeast Asia**.

"Their financial situation is getting worse due to poor rainfall in the area. Most people in the area are farmers and the poor rainfall has led to poor yield which has in turn affected their nutrition status."

Using semi-structured interviews, Focus Group Discussions, and Fuzzy Cognitive Mapping (FCM) sessions, we engaged with men and women from migrant households affected by climate risks This 4-year EU-funded initiative aims to understand **how climate change does and will affect migration and displacement patterns**.

Insights from the field: Identifying New Strategies for Community-Led Climate Action

What's working

- Measures led by women
- **City Planning with Displaced** Communities
- **Locally-led Response** 3.

What's not working

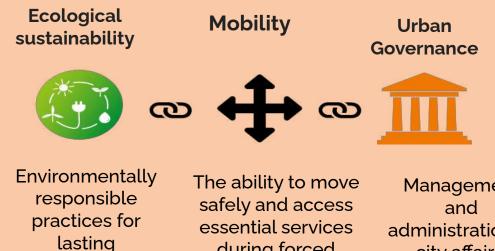

One-Size-Fits-All programmes and policies

Lack of funding to community and local organisations

Negative Coping Mechanisms

- Child labour & out of school children
- Medical needs increasing
- Conflicts over land and selling land

We need to connect ecological sustainability, mobility, and urban governance under the same framework

Management administration of city affairs.

This includes:

during forced

displacement

Creating green jobs: ٠

ecosystems.

- Planning resilient shelters:
- Formalising IDP settlement: •
- **Building capacity Considering migration** cycles

Climate Advocacy in Practice

Against The Clock: Our Position on Climate Migration

For an organisation like Samuel Hall, which has been studying the phenomena of mobility and displacement since its inception, it is clear that the consequences of climate change are felt more severely by some than others.

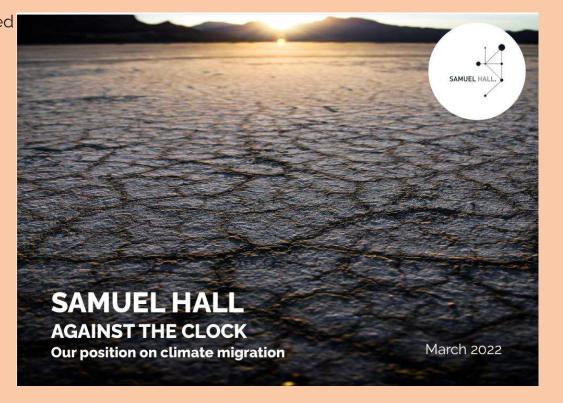

Most people on the move due to climate-related – but others have been or will be forced to cross borders to survive.

The Key Angles we Explore in Our Position Paper

- 1. The importance of a **cohesive and academic definition** of "Climate Displacement"
- 1. The need for **accessible and current data** on climate-related mobility
- 1. Encouraging **policy development** by addressing the disconnect between evidence and policy
- 1. Investing in **grassroots movements and local leaders** to ensure solutions are relevant to the communities affected

Samuel Hall is also leading the conversation on localising action for climate mobility justice and the role of women in the climate mobility agenda.

This brochure highlights some of our work and insights on the topic of climate migration across the regions we work in.

Making Every Voice Count: Storytelling, Advocacy & Outreach for Climate Justice

Spotlight: Our Digital Campaign

Our research and engagement with communities across the world show that climate change not only affects women from marginalised groups more deeply but also accentuates their existing risks to safety. Women tend to have higher awareness of long-term adaptive solutions!

Our week-long Women's Day Campaign in 2023; TITLED ' #SheSpeaksForClimate,' brought **stories, findings and recommendations** from our research to better understand the nexus between climate change, women and mobility.

COMING SOON: OUR PODCAST ON CLIMATE MIGRATION

We have recently secured a grant to co-create a podcast with the <u>HABITABLE</u> project and <u>Migration</u> <u>Matters</u> focusing on the underexplored nexus of climate change and mobility.

Bringing climate migrants, researchers, and community-level organisations into a dialogue - we will listen to their stories, nod at their initiatives, and hear from them on opportunities, challenges, and gaps in climate migration and its research and how we could respond to them.

Narratives of Climate Action on Samuel Hall Stories

SAMUEL HALL.

Samuel Hall's research and mission are defined by the **voices of people and communities** that are as powerful individually as they are collectively. This is why we strive to **move beyond big data**, **algorithms and research reports to focus on stories from the frontlines**.

To tell these stories, we launched Samuel Hall Stories, our multimedia blog and solutions-focused storytelling platform where we regularly work with Refugees and other migrants as well as refugee-led organisations to **shape and tell stories about their unique challenges**, **hopes and aspirations and the messages** they have for the humanitarian world - including for **climate**, **mobility** and **gender-justice**.

Identifying Climate Adaptive Solutions To Displacement In Somalia

Collaborate with Us For Meaningful Impact

Through our research and policy recommendations, Samuel Hall continues to work with local partners and communities to **identify and encourage the links** not just between gender and climate change, but between **gender**, **migration and climate change**.

We are always looking to partner with:

- **Migrant-led organisations** for research, storytelling and capacity-building initiatives.
- Local governments to help train and create effective climate policy responses at the local level
- Local and global research organisations to develop projects, campaigns and advocacy strategies.
- **Investors and donors** to invest in projects which have the greatest impact.
- **Museums and universities** to host courses, guest lectures, and organise events.
- Journalists and media organisations to co-produce stories based on our understanding of climate in fragile contexts.

If interested in partnering with Samuel Hall, please email us at **development@samuelhall.org**

Why Partner with Samuel Hall?

- Expert Research and Analysis Support: research in tough contexts where knowledge is essential in making a difference
- **Sustainability:** Invest in research that can ensure development programming and decisions are sound
- Global Footprint and Networks: Join a group of researchers, specialists and experts from a wide range of sectors
- Have an Impact: Contribute to a dynamic world of information, discussion, analysis and strategy development that has impact on the ground

About Samuel Hall

Samuel Hall is a social enterprise that conducts research, evaluates programmes, and designs policies in contexts of migration and displacement.

Our research connects the voices of communities to changemakers for more inclusive societies.

We are based in the regions we study. Grounded in our team's presence and first-hand experience in complex and fragile settings, we contribute to and enrich local research ecosystems.

Central to our philosophy is the commitment to **localisation** and **decolonisation**, ensuring that our practices are not only intentional but also transformative.

We strive to redefine research paradigms by embracing and integrating these foundational principles in every aspect of our work, from the conceptual, to the empirical.

Samuel Hall was selected by Stanford University as one of the Global South's high-potential, fast-growth social enterprises and completed the **Stanford Seed Transformation Program** 2020-2021.

We have conducted **400+ projects in 60+ countries over 10+ years** – including many of the world's most complex and challenging contexts.
