Research Proposal

Please send a brief description of your proposed research which includes the following:

1. Description of the problem or question your research will address
   a. Brief background & description of the research problem(s)/question(s)
   b. Purpose or goal of the study; questions to be answered
   c. Importance of the study
   d. How your proposed project is consistent with MRI’s mission to explore and support the development of innovative interactional, systemic approaches to understanding and improving human relationships

2. Brief review of relevant research & literature related to the proposed study.

3. Methodology/Procedures
   a. Description of the research, including the research design, selection of research participants, data collection, data analysis, limitations
   b. Include a description of any rating scales, tests or other assessments to be utilized, along with information about their reliability and validity.

4. Description of how the data will be analyzed and presented

5. Describe how the findings of this study will be disseminated

6. Summary including future directions of where this study may possibly point to clinical or other practical applications for improving human relationships.
