

THE COVID-19 VACCINE

Turn on the news and you will hear that a vaccine is our ultimate saving grace from COVID-19. How much do you know about the development of a COVID-19 vaccine? Do you share some of these same concerns?

CONCERN 1: Previous attempts at developing a coronavirus vaccine triggered **lethal hyper-immune reactions** when vaccinated people later came in contact with the wild virus. Many top vaccine experts like Paul Offit and Peter Hotez have also expressed extreme apprehensions over this effect!

CONCERN 2: COVID-19 vaccines are being **fast-tracked** at unprecedented speed and **skipping important animal studies**.

CONCERN 3: Drug companies are **heavily financially incentivized** to win the vaccine race. **At what potential cost to safety and efficacy?**

CONCERN 4: Coronavirus vaccine makers have been given **full immunity from liability** for any potential damages through a **declaration under the PREP Act**.

Does it make sense to financially incentivize vaccine developers to fast-track a vaccine but NOT make them financially liable for the final safety profile?

CONCERN 5: COVID-19 vaccines will likely be the **first vaccine to ever use DNA and RNA technology**. Doesn't that make thorough, long-term testing even more vital?

CONCERN 6: Some vaccines have been proven to only mask symptoms, not the **actual transmission of the disease**. This is extremely dangerous! How will we know if the COVID-19 vaccine has this effect - especially considering vaccine makers have hidden this impact about other vaccines?

CONCERN 7: There are already reports that **the COVID-19 virus may be mutating**. Since the family of coronaviruses are very cold and flu-like, **will a COVID-19 vaccine be just as difficult (or impossible) to nail down as the flu?**
