**H2Go**

**PURPOSE:** Demonstrate the potential of hydrogen powered road transport from Northwest to Southeast transport through a systemic integration of electrolyzer sites, storage facilities, logistics operations, OEMs, filling stations, buses and trucks haulers

**BENEFITS:** H2Go as joint effort of well-coordinated, large-scale investments along the entire values chain will:
- Build on the elements of the value chain already developed (decentralized approach)
- Integrate and assess HRS technology / storage, logistics and routine operations of large-scale interoperational fleets as part of the hydrogen value chain for Europe’s future
- Provide valuable technological and operational insights for further systematic efforts to decarbonize Europe’s mobility system.
