BPS High School to Teacher Program (HSTT)

is a district wide pathway that identifies and cultivates culturally, linguistically and racially diverse high school students who will become the educators of tomorrow. Beginning their freshman year of High School through college graduation, HSTT Student-Scholars receive academic support and professional development. Scholars are tracked and supported through their experience exploring the field of education through lesson planning, teacher observations, and tutoring. They gain leadership skills, participate in college visits and conferences, and prepare for a teaching career.

Educator Mentors

BPS HSTT Scholars meet with their Educator Mentors on a regular basis. Our Mentors are teachers and educators across the district, who are dedicated to Scholar success in and out of the classroom. Mentors lead sessions, develop curriculum, provide ongoing insight into the field of education, and support scholars during classroom observation and service learning projects; such as creating teacher profiles, telling their educational stories, developing an after-school club, and designing their own course!
Program Components

Scholars engage in bi-weekly meetings that focus on the teaching field and the components needed to become an educator. In addition, Scholars are exposed to a variety of professional development and college access activities and supports. Our programs highlight career development, college access and readiness, financial literacy, leadership, resume building, teacher preparation, and tutoring.

The BPS HSTT program partners with several organizations to provide a unique opportunity to Scholars. Some of the opportunities available to Scholars, include but are not limited to, participating in TechGoesHome (TGH) a training program in that provides technology support and access to Acer Chromebooks, networking with School Administrators at BPS HSTT sponsored events, and visiting college campuses that cater their support to our students.

College and University Partnerships

The BPS HSTT program continues to build sustainable partnerships with universities and colleges to offer Scholars FREE college courses and books, reduced rates, academic supports, and Dual Enrollment Programs. Courses offered include Early Childhood Education and General Studies, allowing Scholars to graduate High School with upwards of 24 college credit hours.
