The Developmental Disabilities Assistance and Bill of Rights Act of 2000 defines a developmental disability as a severe chronic disability of an individual that:

- is attributable to a mental or physical impairment or combination of mental and physical impairments.
- is manifested before the individual attains age 22.
- is likely to continue indefinitely.
- results in substantial functional limitations in three or more of the following areas of major life activity: self-care, receptive and expressive language, learning, mobility, self-direction, capacity for independent living, and economic self-sufficiency.
- reflects the individual’s need for a combination and sequence of special, interdisciplinary, or generic services, supports, or other assistance that are lifelong or extended duration and are individually planned and coordinated.
- includes infants and young children from birth to age nine who have substantial delay or specific congenital or acquired conditions, and may be considered to have a developmental disability without limitations in meeting three or more of the areas of major life activity with a high probability of resulting in DD later in life if services are not provided.

Montana Definition of an Intellectual/Developmental Disability

Developmental disabilities means disabilities attributable to intellectual disability, cerebral palsy, epilepsy, autism, or any other neurologically disabling condition closely related to intellectual disability and requiring treatment similar to that required by intellectually disabled individuals if the disability originated before the person attained age 18, has continued or can be expected to continue indefinitely, and results in the person having a substantial disability.
