CELEBRATING 10 YEARS OF IMPROVED LIVES AND LIVELIHOODS
Dear friends and supporters of StoveTeam,

2018 marked the 10th Anniversary of StoveTeam International. That’s a pretty amazing milestone, made possible by the dedicated service and support of volunteers and donors like you!

Since our inception, StoveTeam has accomplished a lot. **We’ve promoted the growth of an entire industry**, facilitating the creation of locally owned businesses producing fuel-efficient cookstoves in Latin America. We have supported the distribution of **more than 71,000** cookstoves and **impacted more than half-a-million** people.

**We’ve expanded our programs** to include not only the local production of cookstoves, but the creation of high quality, lab- and field-tested cookstoves that take into account the needs of our direct beneficiaries – including mothers, fathers, children, teachers and cooks. **We’ve also worked hard to improve the accessibility and affordability of cookstoves** including offering micro-credit to families unable to afford a lump sum payment for a stove.

**Our early efforts creating factories have been leveraged** through new programming that educates and empowers youth as advocates for clean energy within their homes and communities, helping StoveTeam to build a culture of clean cooking now and into the future.

**StoveTeam’s donor base has also grown.** Our high impact work is supported by 75 volunteers and nearly 400 individuals, businesses and foundations annually! As a small organization, **your support has helped efficiently and effectively meet the demands of a more complex world.**

Thank you! **You offer stability in changing times**, helping us to deliver high quality services to families when and where it is needed most.

**Cheers to 10 great years!**
OUR MISSION

StoveTeam International promotes the local production of safe, affordable and fuel-efficient cookstoves to replace dangerous open fires in the developing world.

We envision a world where no family must sacrifice its health, safety or education to cook a meal.

OUR APPROACH

Local Production
StoveTeam helps local entrepreneurs establish locally owned businesses in Latin America. These self-sustaining businesses produce safe, affordable and fuel-efficient cookstoves to replace dangerous open cooking fires. Our partners benefit local communities through local materials manufacturing, employment, support of local services and ultimately through the distribution of a local solution that promotes health, safety and environmental conservation.

Local Solutions
StoveTeam and our partners promote multiple improved cookstoves that are designed to meet the needs and demands of local users. Integrating user feedback is a major part of our design process because we know that if cooks don’t love their stoves, they won’t them. We pride ourselves on working with stove designs that are user developed and user approved.

Local Acceptance
There are many challenges to the sustained use of improved cookstoves. StoveTeam has worked for 10 years to improve awareness and affordability through various strategies including supporting local production, designing and implementing education campaigns, strategically placing cookstoves, providing stove subsidies and piloting cost reduction strategies. These efforts are helping to prove that a clean and efficient cookstove can ensure healthy living, environmental protection and economic advancement.
Las Hamacas is a community nestled in the mountains about four hours drive from Nicaragua’s capital Managua. Families in Las Hamacas live without access to electricity and regularly travel four to five kilometers to fetch water. Access to resources became even more strained when the country fell into a deep political, economic and social crisis in April 2018.

Despite continuing nationwide turmoil, and serious threats to its viability as a business, StoveTeam’s youngest factory partner, Avanza Factory, worked to ensure that communities like Las Hamacas gained access to fuel-efficient alternatives to open fires, helping to increase financial savings and day-to-day survival.

Thanks to a collaboration of StoveTeam supporters, the Avanza Factory, and local NGOs Families United and Project Hope the entire community of Las Hamacas (72 families) was provided with Ecocina cookstoves. Many more families throughout Central America have gained access to cookstoves in 2018 despite hardships like those experiences in Nicaragua. It is the dedication of our partners and supporters like you that makes this work possible.

Open cooking fires
- Cause 4 million deaths annually
- Produce pollution equivalent to smoking 3 packs of cigarettes per day
- Require extended periods of time each day collecting firewood
- Contribute to deforestation

Ecocina cookstoves
- Reduce fuel consumption by 50%
- Decrease dangerous carbon monoxide by 68%
- Benefit the global environment
- Prevent burns
- Support local economies
**Education**

*StoveTeam prioritizes education along with the placement of each stove.*

Our educational programs have continued to grow in 2018. In El Salvador, **StoveTeam placed 10 large institutional stoves in schools**, exposing parents and their children to the benefits of a fuel-efficient cookstove. In Honduras, StoveTeam initiated an educational program at a local school. **30 students were selected as Stove Ambassadors**. The children learned about the health, environmental and economic benefits of clean cookstoves. In conjunction with both programs, StoveTeam provided discounted stoves to the families of participating students. **By exposing young people to clean energy technology, StoveTeam aims to break the generational cycle of energy poverty.**

**Design**

*For a stove to make the biggest impact, the user must love to use it!*

For all stoves produced by our partner factories, StoveTeam conducts tests based on efficiency and user feedback. In 2018, all StoveTeam partner factories began building, testing and distributing large institutional stoves. **These stoves are efficient, safe, and inexpensive to build and are intended to benefit large institutions such as school and hospitals.** In El Salvador, various foundations supported StoveTeam’s efforts to produce 10 institutional stoves and their placement in local schools. StoveTeam also provided discounts on Ecocinas to community members. **StoveTeam continues to conduct testing on the Ecocina to ensure that each family receives a high-quality stove.**

“StoveTeam has been successful because we are able to rely on and work with local people. Our connection to local people creates deep ties into local communities helping us to understand local needs and challenges in a way most US-based nonprofits can’t.”

8,354 stoves produced
62,655 benefited
At first I did not understand how building stoves would help, but while I was there and saw what families experience every day, I saw how beneficial it is within the community and for individual families.”

“Ten years ago when we were helping build the factory for Gustavo in El Salvador, someone asked me, ‘How did you create this family?’ We were and are a family of cookstove advocates dedicated to empowering those who have no choice other than to cook over an open fire. You are all part of the family that has helped install over 71,000 safe, affordable and fuel-efficient cookstoves in Central America. On behalf of all the families you have supported, thank you!”

WAYS TO GIVE
Help ensure that no family must sacrifice its health, safety or education to cook a meal.

Invest Monthly
Become a pillar to our long-term success by donating monthly. This offers you a convenient way to automate your gift while providing year-round stability to ensure our programs have the greatest impact.

Fundraise
Rally your networks and inspire them to give in honor of clean and safe kitchens! Your fundraiser could center around a birthday, special event or other milestone.

Gifts of Stock
Support StoveTeam through gifts of stock, bonds or mutual funds. If you are 70.5 or older, you may qualify for an IRA Qualified Charitable Distribution. Consult your tax advisor.

Legacy Giving
With a planned gift to StoveTeam, you can help ensure that StoveTeam’s high impact work continues for generations, while accomplishing your own financial and philanthropic goals.

“We love that by donating to StoveTeam, it fulfills so many of our wishes. It improves the quality of life of people in need, it creates jobs in local economies, and it helps to protect the ecosystem by decreasing the amount of wood used. My wife and I love cooking. Helping people around the world to cook more safely and efficiently feels great!”
