THE DUWAMISH RIVER SUPERFUND SITE

20,000 acres

5 miles long

The Duwamish River Superfund Site is 20,000 acres long and 5 miles wide. The river flows through the city of Seattle and into Puget Sound. The site includes approximately 20 miles of the Duwamish River and its tributaries. The river is contaminated with a variety of toxic substances, including heavy metals, hydrocarbons, and organic compounds. The site is managed by the U.S. Environmental Protection Agency (EPA), which is working to clean up the contamination and restore the river's habitat. The site is one of the largest Superfund sites in the United States and is estimated to cost over $1 billion to clean up.
