Renaissance Global Services, LLC targets the mission and the people-fully committed to delivering projects effectively and efficiently with our partners' and employees' best interests in mind. We value honesty, loyalty, integrity and leadership. The RGS promise is to deliver first-rate project completion to meet your project needs at every level.

National Grid - NY: (2014-present)

RGS provides construction inspection and safety monitoring services for large scale capital delivery gas pipeline and improvement projects in the New York City (NYC) boroughs and Long Island. These owner's representative services focus on monitoring contractor installation operations, QA/QC procedures and safety protocols

RGS provided Project Safety Construction Managers to execute process safety review and assist in compiling KPIs for distribution to various levels of Client management. Operatives worked in Natural Gas Transmission & Distribution (including Liquified Natural Gas operations) and Electric Transmission & Distribution in NY, MA and RI.

RGS recently completed an expedited survey program of over 30,000 homes to locate gas shutoff valves. The NYC program was completed in six weeks (2018). This effort included identifying qualified resources and deploying them efficiently to achieve the Client's stated objective, all with an extremely tight project timeframe.

- supports PMO with execution and administration of capital works specialty services
- support Client Manager with project tracking, ongoing costs reconciliation, projects close-out, coordination with engineering staff, due diligence

PSEGLI: RGS field personnel provided onsite inspection services for geotechnical boring activities in support of design and development for Lindbergh Towers Upgrade project.

UGI - PA: RGS provided full time Certified Welding Inspectors for eight (8) miles of 12" steel gas transmission pipeline to supply fuel to a new cogeneration facility in Muncy, PA.

Key Personnel:

Serafino T. Catapano PE

PM, Energy Services

Phone: 917.848.7084

scatapano@renglobalservices.com

Our utility services are led by our lead infrastructure PM, Mr. Serafino T. Catapano, PE. Mr. Catapano has comprehensive experience in infrastructure operations in the areas of engineering, construction, project/program management, maintenance operations and emergency response, regulatory compliance, environmental management, codes and standards and cost control/reporting.

His engineering experience includes the design and construction of gas distribution and transmission systems including natural gas pipeline projects, pressure regulating stations, heater installations, cogeneration facilities, specialty legacy upgrades/retrofits and numerous specialty projects. Nearly all the projects he has completed have been in congested urban environments.

Mr. Catapano is an advocate of Research & Development and is particularly committed to the deployment and utilization of mature tools and techniques to improve safety, on-going operations efficiency and stakeholder/ customer satisfaction.

Renaissance Global Services, LLC

Utility Services

Renaissance Global Services is a project management, construction inspection and site remediation consulting firm with a concentration in the utility, pharmaceutical/life science, real estate and environmental industries. Our highly experienced team leverages decades of experience and military-inspired discipline to evaluate, develop and manage projects for both the private and public sectors. We work closely with our clients to technically review and develop site issues across multiple disciplines. The RGS model is efficiency-centric with a focus on quality. We are committed to ensuring best practices and the highest standards across all areas of services.

Our Capabilities

RGS is committed to providing safe and seamless service to local, state and federal agencies' construction projects. Our service area roots are in the energy utility industry: For eight years, we have served several public utility companies in support of their infrastructure improvement projects. RGS has, through interactive search and selection, identifies, hires and provides "grass-roots" qualified inspection and support personnel for large scale capital construction projects for major utility companies in the Northeast. Services include construction inspection and oversight, conformance and compliance reviews, quality assurance, certified welding inspection and adjunct training for specialty tasks requiring start-up/refresher training, as well as Operator Qualification compliance, project safety support and inspections, including best practices review and KPI reporting.

Construction Inspection

Our project inspector's extensive knowledge in their field of expertise gives us a unique position to manage varied project site inspection and safety protocols. We meet with key representatives to determine project objectives, review estimates and monitor milestones and progress, as well as manage aspects of contract procedures, dispute resolution and safety plans.

Site Remediation & Environmental Restoration

With effective environmental remediation and restoration practices, our projects not only meet state and federal guidelines, they exceed them. With our knowledge of environmental regulation, RGS' highly trained staff can manage a multitude of environmentally related projects, including remediation and restoration of contaminated sites.
