KVH.

There is a high biosecurity risk associated with kiwifruit orchard contractors, who routinely move machinery, equipment, tools, people, kiwifruit plant material and compost within and between orchards.

Contractors who are registered with Zespri and hold a Compliance Assessment Verification (CAV) need to complete a Contractors Biosecurity Plan to keep on file with their CAV records for audit. This template is designed to be used to meet these requirements.

Contractor details				
Date:	17 December 2022			
Contractor business name:	Mubwons Ltd			
Contact responsible:	Chloe King			
Contact phone:	273524735			
Contact email:	mubwons@g	gmail.com		
Activities carried out (examples are Harvester; Spray Contractor; Vine Maintenance; Fertiliser Contractor)	Harvester Vine Maintenance			
Kiwifruit region(s) of operation:	Te Puke			
Risks to be managed				
Contractors need to identify which risks are relevant to them in their business and are required to put systems in place to manage them. Anything brought onto an orchard needs to be clean and free of plant material and soil. Any kiwifruit plant material brought on (e.g., budwood, pollen, plants etc) needs to be from a KPCS certified source. KVH maintains a <u>list of sanitisers</u> effective against a range of plant diseases.				
Machinery	Yes	□ No		
People (clothing, footwear)	Yes	□ No		
Tools	Yes	□ No		
Other equipment (name)	□ Yes	No		
Kiwifruit plants	Yes	□ No		
Budwood	Yes	□ No		
Pollen	Yes	□ No		
Shelter plants	□ Yes	No		

Compost	□ Yes No	
□ machinery free of soil and □ cleaned and sanitised afte □ approved sanitiser used Ci		
	People hygiene	
It is important that people comaterial which could carry a	coming onto an orchard are not carrying soil and plant and spread infection.	
other additional measures	ecked and is free of plant material in place (e.g., footbath, sanitiser) and listed below: ne policy at www.mubwons.co.nz	
	Tools and other equipment	
	can spread infection from plant to plant and orchard to d and sanitised to prevent this likelihood.	
□ cleaned and sanitised	t material before entering each orchard refer to KVH good practice orchard hygiene advice and the formation)	
Biosecurity awareness		
Contractors need to understa what biosecurity thre best practice to avoid hygiene requirements how to report the unit traceability requirements	eats there are to kiwifruit orchards, d their spread, s, usual,	

Kiwifruit's Most Unwanted How might this enter an orchard? How does this affect OGR? Soil borne diseases Ceratocystis fimbriata **Tools** Plant material Soil on people or vehicles and equipment Production impacts - up to 50% vine loss Verticillium Wilt Tools Plant material Soil on people or vehicles and equipment Production impacts - up to 100% vine loss Invasive phytophthoras Tools Plant material Soil on people or vehicles and equipment Production impacts - plant killers, impacts unknown **Bacteria** Psa (non-New Zealand biovars) Tools People Plant material Impacts to green varieties and possibly new gold varieties also **Pests** Fruit flies Movement of infested fruit Market access restrictions Brown Marmorated Stink Bug Imported vehicles and machinery Visitor's luggage Shipping containers Internet purchases Production impacts - fruit loss, control costs and residue issues for markets Eggs on imported vehicles, machinery, or structural Spotted Lanternfly materials Shipping containers Production impacts - mainly from sooty mould. Hitchhiker pest, so hard to control spread White Peach Scale Imported fruit being brought onto the orchard Production impacts - fruit loss and control costs □ I have read and understand the risks above and will help to prevent them through my biosecurity practices. □ I know to report anything unusual, and if it is a pest to catch it, snap it and report to either the Biosecurity New Zealand hotline on 0800 80 99 66 or KVH on 0800 665 825. Staff training Staff need to be trained to ensure they understand all contractor (and grower) biosecurity protocols. □ staff training completed for all staff in all areas of the contractor biosecurity plan □ records maintained and signed by trainer □ records kept home office / cloud

Grower onsite requirements

Contractors must check for any specific biosecurity requirements with their orchard contact.
 □ check if the orchard has any specific biosecurity requirements before entering □ staff and hygiene register completed □ movement of vehicles kept to dedicated access tracks/roads □ vehicles left in dedicated parking area outside fruit production area □ any unusual pests or vine symptoms reported to grower or KVH
Traceability
Maintaining records of what and who has been on the orchard and when, allows better traceability in the event of a biosecurity incursion. From a biosecurity perspective, these records can be hugely important
□ records maintained of orchards visited - date and time Records kept in paper diary at home office.
 personnel present at each orchard recorded Timesheets
□ records kept (location) Home office
□ if any plant material is involved in contractor activity (e.g., plants, budwood, pollen) traceability to source maintained. Grower supplied Pollen linked to Kpin OR circle if NON-APPLICABLE
$\hfill\Box$ location on the orchard where plant material is used is recorded
Records
This is a summary of records that you need to have on hand and keep available should they be required for a biosecurity incursion. KVH may audit contractors to ensure the industry is meeting their biosecurity responsibilities.

APPENDIX 12

CAV Contractors Biosecurity Plan

□ staff training records □ orchard visit log □ staff traceability records □ traceability records for plant material if part of operation showing movement from where to where □ records maintained for seven years and available to KVH on request □ records kept home office
Annual review date: For review December 2023
