John Bel Edwards
Governor of Louisiana

Re: Reject SB 184 “Prohibits the abortion of an unborn human being with a detectable heartbeat”

Dear Governor Edwards:

On behalf of the Society for Maternal-Fetal Medicine (SMFM) State Liaison Network Louisiana members, we are writing in strong opposition to SB 184 and urge the state of Louisiana to reject this legislation.

Established in 1977, SMFM is the medical professional society for obstetricians who have additional training in the area of high-risk, complicated pregnancies. Our members see the sickest and most complex patients, and aim to improve care, research, advocacy and education for pregnant women. Because maternal-fetal medicine (MFM) physicians primarily provide care to women experiencing high-risk pregnancies, the Society is particularly concerned with access to pregnancy termination services for this population. The women our members care for everyday - women with high-risk, complicated pregnancies - are more likely to experience medical problems for themselves, their fetus(es), or both that can lead to increased maternal and perinatal morbidity and mortality. For example, many genetic anomalies render a fetus nonviable and can lead to a loss or stillbirth late in pregnancy. In other instances, the life of the woman may be at risk due to a complicated pregnancy, and abortion may be required to protect a woman’s life or health.

The issue of pregnancy termination specifically is a deeply personal matter. Any legislation that regulates medical care should be based on scientific evidence and best practices. We oppose legislation that interferes with the physician-patient relationship and is not based upon scientific evidence. Any legislation that would ban termination of pregnancy after the detection of the fetal heartbeat, or at six weeks’ gestation, as SB 184 does, presents a vast interference with the patient-physician relationship, threatens communication between the physician and patient, and potentially compromises the physicians' medical judgment. For high-risk pregnancies, eliminating healthcare decisions later on in pregnancy presents significant challenges to patient care.

The criminalization of abortion after six weeks’ gestation will affect our members’ ability to make ethical and professional decisions in the best interest of their patients. We do not believe that the legislation’s exception for “medical emergency” or “health exception” contained in this legislation sufficiently allows health care providers to make evidence-based clinical decisions alongside their patient. For high-risk patients that our members see, it is particularly concerning that a requirement to wait until a medical condition deteriorates before permission to provide medically indicated treatment is included in this legislation. Such a “wait and see” approach to health care only jeopardizes women’s health and compromises the medical decision-making process.
This bill is both unconstitutional and an unnecessary political interference in the practice of medicine. A woman's right to choose an abortion has been settled law since 1973 when the Supreme Court ruled in Roe v. Wade. That decision makes clear that women may decide independently to have an abortion in the first trimester. SB 184 strips women of their Constitutional right to choose well before the first trimester has ended and represents a dangerous precedent for both patients and providers. A recent report by the National Academies of Sciences, Engineering, and Medicine (NASEM)\(^1\) comprehensively reviewed the state of science on all methods of abortion and confirmed once again that abortion is one of the safest medical procedures. It found that the biggest threats to the quality of abortion care in the United States are unnecessary government regulations on such care.

SMFM respectfully urges the state of Louisiana to reject SB 184. Please do not hesitate to contact Katie Schubert, SMFM’s Chief Advocacy Officer, at kschubert@smfm.org or (202) 517-6122, should you have questions.

Sincerely,

Brian Iriye, MD
President

Matt Granato, LL.M., MBA
Chief Executive Officer
