How To Watch IMYFF Screenings On Your TV

For Roku Users

Search for "Eventive TV" in the Roku Channel Store on your Roku. You can also add the Eventive TV app to your Roku via the Roku website by underline(clicking here).

Once you have installed the app, open it and follow the instructions to login. All of your unlocked content will be available on the app. If a program has not already been unlocked, you'll have to unlock it on another device such as a laptop or mobile device first.

Please note: livestreams are currently not available via the TV app. You can cast them from another device to your TV.

For Apple TV Users

Please download the "Eventive TV" app from the Apple TV App Store (accessible via your TV). You must have at least a generation 4 Apple TV to access the App Store.

When you open the app for the first time you'll see an activation code. On another device, please navigate to watch.eventive.org/tv, then login if necessary and use the code to connect your account. Now, select from the available channels on the Eventive Apple TV app to begin watching. All of your unlocked content will be available on the app. If a program has not already been unlocked, you'll have to unlock it on another device such as a laptop or mobile device first.

If you ever need to re-activate the TV app, you can select TV app setup by hovering over the login ID circle at the upper right of the device screen.

Please note: livestreams are currently not available via the TV app. You can AirPlay them from another device to your TV.

Alternate Ways To Stream On Your TV

If you have an Apple TV, Chromecast (3rd gen or later), or a smart TV enabled with AirPlay or Chromecast, set your computer, mobile device or browser to "AirPlay" or "cast" to the TV device. Unlock the program on Eventive Virtual, then set your player window to full-screen using the icon at the lower right.

See our detailed instructions for our dedicated Apple TV and Roku apps below.

Chromecast will work on select Android devices, see instructions above. Chromecast on iOS devices are not compatible with the Eventive platform.

Important note: Due to content protection restrictions, the Screen Mirroring feature on Smart TVs and other devices cannot be used. Many browsers built into Smart TVs and other devices will NOT allow protected content to play.

You can also directly connect a laptop or computer using an HDMI cable by doing the following:

- Make sure your computer is close enough to your Television for the HDMI cable to reach between them safely.
- Connect one end of the HDMI cable into an available HDMI port on the TV. Take note of the HDMI input number it is being connected to.
- Plug the other end of the cable into your laptop's HDMI out port
- Set the TV to the HDMI Input port that the computer is connected to using the source or display button on your TV remote.
- If your computer's display does not automatically appear on your television screen, you may need to have the computer manually detect the display.
- Windows: Right-click on the desktop > Display Settings > Click Detect > Click the "Multiple displays" drop-down box and select "Duplicate these displays") > Click Apply.
- Mac: Go to the Apple Menu > choose System Preferences > Choose the "Displays" panel > Hold down the "Option" key to show the "Detect Displays" button – note that it replaces the 'Gather Windows' button > Click on "Detect Displays" while holding down Option to use the function as intended.
