

SPRING TANK

JHS PEDALS

Classic spring-like reverb in a simple package with enough options to satisfy any spring reverb enthusiast. Blow them away with the Spring Tank!

controls

BOOST - Controls the amount of volume boost when the pedal is turned on.

HIGHS - Functions as a high pass filter. Turning right is brighter, left is darker.

DEPTH - Controls the size or space of the reverb. Left is smaller, right is bigger.

LENGTH - Controls the decay time of the reverb. Left is shorter, right is longer.

TANK 1 - Controls the main reverb mix. Left is less, right is more.

TANK 2 - Controls the reverb mix when the Tank 2 switch is engaged.

jacks

INPUT - Lower 1/4" jack on the right side of the pedal.

OUTPUT - 1/4" jack on the left side of the pedal.

EFFECTS LOOP - Upper jack on the right side of the pedal. Insert a TRS splitter cable into this jack and plug it in to any pedal to add the effect to the wet reverb effect only.

switches

BYPASS - Turns the pedal on or off.

TANK 2 - Engages the Tank 2 reverb mix knob which acts as a secondary reverb mix you can use on the fly.

POWER - Uses 9V DC Negative Center. Do not use more than 9V DC. Your warranty will be voided. 73mA consumption.
