Networking with the Chemists’ Club

The partnership with the Chemists’ Club, a 501c(3) organization comprising industrial scientists, engineers, and venture capitalists that established its first University Chapter at NYU in 2012, continues to expand, connecting students and postdocs to the industrial sector. The Chemists’ Club provides for student-driven workshops with the Chemists’ Club, introducing NYU undergraduates, graduate students, and postdocs to the technology sector while strengthening connections between NYU faculty and industry. Members include chemists, chemical engineers, chemical industry management, consultants, financial analysts, attorneys, and other professions, including academia. The NYU chapter has served as a template for similar chapters at other academic institutions in the Northeast. Annual events and career workshops that rotate about locations in NYC provide for exchanges and networking among members, students, and postdocs. One noteworthy event – the First Annual Bond Conference, held at NYU and attended by over 130 attendees, with representatives from industry and UNESCO, focusing on sustainability, from the perspective of the industrial sector.
