IMPACT OF REDUCED WELLBEING

Psychological stress is defined as demands exceeding resources. Small amounts of stress may be perceived as challenging and motivating, however sustained and excessive stress may lead to psychological distress such as feeling pressured and being overwhelmed.

Extreme stress can result in

- insomnia
- irritability
- anxiety
- burnout
- fatigue
- traumatic stress
- depression

We all have a limited capacity - stresses at home make it harder to manage stresses at work, and vice versa.

If you are experiencing any of the above consider talking to your line manager or someone you trust about the impact of your work.
You may want a referral to your local employee wellbeing service.
