Pollination Pairs!

You just learned about pollination! Now let’s see how much food you can get by doing some pollination of your own. Draw a way the bee can fly that will connect the pollination pairs. You want the pepper to connect to the pepper, the pumpkin to the pumpkin, until you have all the food! You can draw in loops like the bee is flying or straight lines connecting the flowers.

Draw lines between the plants to pollinate them!
Pollinated Lives
Make drawings of people in your life and connect them as a friendship pollinator. Draw around the circle:
  Two people that live nearby
  Two people who are also friends with each other
  Two people who are taller than you
  Two people who are funny
