Interviews are conducted with adults age 18 and over representing the 50 states and the District of Columbia. Panel members are randomly drawn and weighted to reflect the U.S. population of adults age 18 and over. The survey was conducted by phone and lasted an average of 14-16 minutes. The interviews were conducted by NORC at the University of Chicago between April 20 and May 26, 2020. The sample size was 4,238 adults age 18 and over. The response rate was 54%.

The data were weighted to adjust for the survey design and non-response. The weighted data reflect the U.S. population of adults age 18 and over. Demographic weighting variables were obtained from the 2020 Current Population Survey. The count of COVID-19 deaths by state and county was obtained from USA Facts. The weighted data reflect the U.S. population of adults age 18 and over.

The survey included questions about the impact of COVID-19 on individuals and households. The survey also included questions about social distancing, work patterns, and the availability of health insurance.
