The COVID-19 Household Impact Survey is a philanthropic effort to provide national and regional statistics about physical health, mental health, finances, and other characteristics of the U.S. adult household population during the COVID-19 pandemic. The survey is designed to provide weekly estimates of the U.S. adult household population nationwide and for 18 regional areas including 10 Census divisions.

University of Chicago is conducting the survey.

The survey uses a probability sample of households in the U.S. as of May 2020. The sample is drawn from AmeriSpeak. In households with more than one adult panel member, only one is selected at random for the sample. Invited panel members are interviewed for up to eight weeks. The interview was conducted in wave 1 between May 20 and September 20, 2020. The weights were reapplied to the data after the second wave of data collection.

Appendix

Appendix A

A Note on Applying Weights

The weights can be applied to the data. See Section 3 for a description of the weights.

Appendix B

The survey is designed to provide weekly estimates of the U.S. adult household population nationwide and for 18 regional areas including 10 Census divisions.

The survey is conducted by NORC at the University of Chicago. The survey uses a probability sample of households in the U.S. as of May 2020. The sample is drawn from AmeriSpeak. In households with more than one adult panel member, only one is selected at random for the sample. Invited panel members are interviewed for up to eight weeks. The interview was conducted in wave 1 between May 20 and September 20, 2020. The weights were reapplied to the data after the second wave of data collection.

Appendix C

A Note on Applying Weights

The weights can be applied to the data. See Section 3 for a description of the weights.

Appendix D

The survey is designed to provide weekly estimates of the U.S. adult household population nationwide and for 18 regional areas including 10 Census divisions.

The survey is conducted by NORC at the University of Chicago. The survey uses a probability sample of households in the U.S. as of May 2020. The sample is drawn from AmeriSpeak. In households with more than one adult panel member, only one is selected at random for the sample. Invited panel members are interviewed for up to eight weeks. The interview was conducted in wave 1 between May 20 and September 20, 2020. The weights were reapplied to the data after the second wave of data collection.

Appendix E

A Note on Applying Weights

The weights can be applied to the data. See Section 3 for a description of the weights.

Appendix F

The survey is designed to provide weekly estimates of the U.S. adult household population nationwide and for 18 regional areas including 10 Census divisions.

The survey is conducted by NORC at the University of Chicago. The survey uses a probability sample of households in the U.S. as of May 2020. The sample is drawn from AmeriSpeak. In households with more than one adult panel member, only one is selected at random for the sample. Invited panel members are interviewed for up to eight weeks. The interview was conducted in wave 1 between May 20 and September 20, 2020. The weights were reapplied to the data after the second wave of data collection.

Appendix G

A Note on Applying Weights

The weights can be applied to the data. See Section 3 for a description of the weights.

Appendix H

The survey is designed to provide weekly estimates of the U.S. adult household population nationwide and for 18 regional areas including 10 Census divisions.

The survey is conducted by NORC at the University of Chicago. The survey uses a probability sample of households in the U.S. as of May 2020. The sample is drawn from AmeriSpeak. In households with more than one adult panel member, only one is selected at random for the sample. Invited panel members are interviewed for up to eight weeks. The interview was conducted in wave 1 between May 20 and September 20, 2020. The weights were reapplied to the data after the second wave of data collection.

Appendix I

A Note on Applying Weights

The weights can be applied to the data. See Section 3 for a description of the weights.

Appendix J

The survey is designed to provide weekly estimates of the U.S. adult household population nationwide and for 18 regional areas including 10 Census divisions.

The survey is conducted by NORC at the University of Chicago. The survey uses a probability sample of households in the U.S. as of May 2020. The sample is drawn from AmeriSpeak. In households with more than one adult panel member, only one is selected at random for the sample. Invited panel members are interviewed for up to eight weeks. The interview was conducted in wave 1 between May 20 and September 20, 2020. The weights were reapplied to the data after the second wave of data collection.

Appendix K

A Note on Applying Weights

The weights can be applied to the data. See Section 3 for a description of the weights.

Appendix L

The survey is designed to provide weekly estimates of the U.S. adult household population nationwide and for 18 regional areas including 10 Census divisions.

The survey is conducted by NORC at the University of Chicago. The survey uses a probability sample of households in the U.S. as of May 2020. The sample is drawn from AmeriSpeak. In households with more than one adult panel member, only one is selected at random for the sample. Invited panel members are interviewed for up to eight weeks. The interview was conducted in wave 1 between May 20 and September 20, 2020. The weights were reapplied to the data after the second wave of data collection.

Appendix M

A Note on Applying Weights

The weights can be applied to the data. See Section 3 for a description of the weights.

Appendix N

The survey is designed to provide weekly estimates of the U.S. adult household population nationwide and for 18 regional areas including 10 Census divisions.

The survey is conducted by NORC at the University of Chicago. The survey uses a probability sample of households in the U.S. as of May 2020. The sample is drawn from AmeriSpeak. In households with more than one adult panel member, only one is selected at random for the sample. Invited panel members are interviewed for up to eight weeks. The interview was conducted in wave 1 between May 20 and September 20, 2020. The weights were reapplied to the data after the second wave of data collection.

Appendix O

A Note on Applying Weights

The weights can be applied to the data. See Section 3 for a description of the weights.

Appendix P

The survey is designed to provide weekly estimates of the U.S. adult household population nationwide and for 18 regional areas including 10 Census divisions.

The survey is conducted by NORC at the University of Chicago. The survey uses a probability sample of households in the U.S. as of May 2020. The sample is drawn from AmeriSpeak. In households with more than one adult panel member, only one is selected at random for the sample. Invited panel members are interviewed for up to eight weeks. The interview was conducted in wave 1 between May 20 and September 20, 2020. The weights were reapplied to the data after the second wave of data collection.

Appendix Q

A Note on Applying Weights

The weights can be applied to the data. See Section 3 for a description of the weights.

Appendix R

The survey is designed to provide weekly estimates of the U.S. adult household population nationwide and for 18 regional areas including 10 Census divisions.

The survey is conducted by NORC at the University of Chicago. The survey uses a probability sample of households in the U.S. as of May 2020. The sample is drawn from AmeriSpeak. In households with more than one adult panel member, only one is selected at random for the sample. Invited panel members are interviewed for up to eight weeks. The interview was conducted in wave 1 between May 20 and September 20, 2020. The weights were reapplied to the data after the second wave of data collection.

Appendix S

A Note on Applying Weights

The weights can be applied to the data. See Section 3 for a description of the weights.

Appendix T

The survey is designed to provide weekly estimates of the U.S. adult household population nationwide and for 18 regional areas including 10 Census divisions.

The survey is conducted by NORC at the University of Chicago. The survey uses a probability sample of households in the U.S. as of May 2020. The sample is drawn from AmeriSpeak. In households with more than one adult panel member, only one is selected at random for the sample. Invited panel members are interviewed for up to eight weeks. The interview was conducted in wave 1 between May 20 and September 20, 2020. The weights were reapplied to the data after the second wave of data collection.

Appendix U

A Note on Applying Weights

The weights can be applied to the data. See Section 3 for a description of the weights.

Appendix V

The survey is designed to provide weekly estimates of the U.S. adult household population nationwide and for 18 regional areas including 10 Census divisions.

The survey is conducted by NORC at the University of Chicago. The survey uses a probability sample of households in the U.S. as of May 2020. The sample is drawn from AmeriSpeak. In households with more than one adult panel member, only one is selected at random for the sample. Invited panel members are interviewed for up to eight weeks. The interview was conducted in wave 1 between May 20 and September 20, 2020. The weights were reapplied to the data after the second wave of data collection.

Appendix W

A Note on Applying Weights

The weights can be applied to the data. See Section 3 for a description of the weights.

Appendix X

The survey is designed to provide weekly estimates of the U.S. adult household population nationwide and for 18 regional areas including 10 Census divisions.

The survey is conducted by NORC at the University of Chicago. The survey uses a probability sample of households in the U.S. as of May 2020. The sample is drawn from AmeriSpeak. In households with more than one adult panel member, only one is selected at random for the sample. Invited panel members are interviewed for up to eight weeks. The interview was conducted in wave 1 between May 20 and September 20, 2020. The weights were reapplied to the data after the second wave of data collection.

Appendix Y

A Note on Applying Weights

The weights can be applied to the data. See Section 3 for a description of the weights.

Appendix Z

The survey is designed to provide weekly estimates of the U.S. adult household population nationwide and for 18 regional areas including 10 Census divisions.

The survey is conducted by NORC at the University of Chicago. The survey uses a probability sample of households in the U.S. as of May 2020. The sample is drawn from AmeriSpeak. In households with more than one adult panel member, only one is selected at random for the sample. Invited panel members are interviewed for up to eight weeks. The interview was conducted in wave 1 between May 20 and September 20, 2020. The weights were reapplied to the data after the second wave of data collection.
