The Data Foundation provides administration and operational support for the COVID-19 wave 3 samples, NAT_WGT_COMB_POP and REG_WGT_COMB_POP, should be used for analysis for national and regional samples, REGION_WEIGHT_POP are population weights that total to size of the adult population nationally or in the regions. Any analyses that use the weights must be weighted back to the same target population.

The dataset contains 6 weight variables. When generating national estimates, the NATIONAL_WEIGHT or NATIONAL_WEIGHT_POP should be used, for regional estimates, the REGION_WEIGHT or REGION_WEIGHT_POP should be used. When generating estimates for adults, the ADULT_WEIGHT or ADULT_WEIGHT_POP should be used. When generating estimates for the labor force, the LABOR_FORCE_WEIGHT or LABOR_FORCE_WEIGHT_POP should be used.

A Note on Applying Weights

Field interviewers (face-to-face). The panel provides sample coverage of approximately 97% of the U.S. household population. Those excluded from the panel are current or former prisoners, those living in institutions, or those whose addresses could not be verified. The panel is designed to be representative of: the entire U.S. population, the U.S. household population, and all adults (age 18 and over). The panel is constructed with a stratified area probability sample (SAP) design, allowing for the construction of national and regional estimates.

The dataset contains 6 weight variables. When generating national estimates, the NATIONAL_WEIGHT or NATIONAL_WEIGHT_POP should be used, for regional estimates, the REGION_WEIGHT or REGION_WEIGHT_POP should be used. When generating estimates for adults, the ADULT_WEIGHT or ADULT_WEIGHT_POP should be used. When generating estimates for the labor force, the LABOR_FORCE_WEIGHT or LABOR_FORCE_WEIGHT_POP should be used.
