## About the NORC at the University of Chicago

The Data Foundation is an independent research institution that delivers reliable data and rigorous analysis to guide critical programmatic, business, and policy decisions. Since 1941, NORC has conducted groundbreaking studies, created and applied innovative research tools, and advanced cutting-edge solutions for measuring complex and emerging topics.

### The COVID Impact Survey: Methodological Approach

- **Data Collection**: NORC conducted the COVID Impact Survey using a national, probability-based sample of US residents. The survey was fielded from May 30 to June 8, 2020. Panelists were recruited via phone, email, and social media to ensure diverse representation of the US population.

- **Sample Characteristics**: The sample includes approximately 304 participants. It was designed to achieve target estimates for a specified demographic population of interest.

- **Sampling Weights**: Panelists' weights were used to adjust for potential nonresponse and to match the population targets specified by the ABS. The weights are used to estimate the survey's sampling error.

- **Data Quality and Validation**: Data were collected using a robust design that includes multiple rounds of surveys. The survey was designed to assess the impact of COVID-19 on various aspects of daily life, including health, employment, and immigration.

- **Field Interviewers**: Field interviewers were trained to conduct the survey in a way that minimized bias and ensured data quality.

- **Field Work**: Field work was conducted to ensure that the survey was conducted in a way that minimized bias and ensured data quality.

### Additional Information

- **ABS Sample Performance Summary**: The ABS sample performance summary includes a table with columns for the sample size, the number of respondents, and the number of respondents who completed the survey.

- **Survey Participant Breakdown**: The survey participant breakdown includes columns for the number of respondents who participated in the survey, the number of respondents who were provided with data, and the number of respondents who provided data about their health, employment, and immigration status.

- **Survey Participation**: The survey participation includes columns for the number of respondents who participated in the survey, the number of respondents who were provided with data, and the number of respondents who provided data about their health, employment, and immigration status.

- **Survey Completion Status**: The survey completion status includes columns for the number of respondents who participated in the survey, the number of respondents who were provided with data, and the number of respondents who provided data about their health, employment, and immigration status.

### Funding and Support

The COVID Impact Survey was conducted by NORC at the University of Chicago with support from the American Institutes for Research. NORC is an independent research institution that delivers reliable data and rigorous analysis to guide critical programmatic, business, and policy decisions. Since 1941, NORC has conducted groundbreaking studies, created and applied innovative research tools, and advanced cutting-edge solutions for measuring complex and emerging topics.
