Guidance on Symptoms After COVID 19 Vaccination

It is not uncommon to have symptoms after the vaccination for COVID-19. There tend to be more symptoms after the second dose.

If there are mild symptoms they may return to work, however, if there is fever, they should not return until the fever has resolved for 24 hours without fever reducing medication. Many people have significant fatigue, headache or muscle aches which would make work difficult. We recommend that they stay home and rest.

If symptoms last >2 days they should consult a medical provider. In this case they would follow the protocol for symptoms and may need testing for COVID 19.
