

MEASURING GUIDE

Ordering the correct size enclosure is critical to a proper installation. The drawings on the following pages are designed to help you provide us with this information. The final page can be used to hand draw any custom applications. Please remember that we can never have too much information regarding your application.

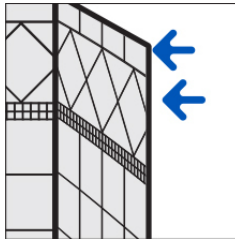

STEP 1

Ensure that the finished wall material is in place before measuring. Confirm that proper blocking is in place for heavy glass enclosures.

STEP 2

Measure each width or centerline (middle of threshold) as demonstrated by arrowed lines. *Remember to allow for the body of the measuring tape.*

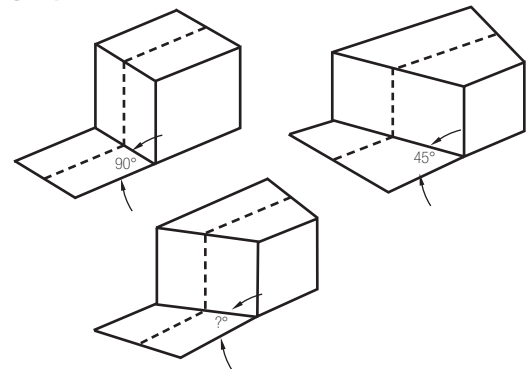

STEP 3

Measure maximum height available from the top of the tub deck or threshold to top of the tile or fiberglass walls. Refer to your price list for the most appropriate standard height. Custom heights are also available for most models.

STEP 5

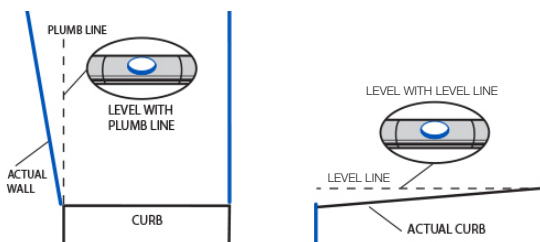

Note all face angles. A face angle is the measure of the angle where the glass and wall or buttress meets. The face angle is always measured from the centerline to the wall on the inside of the unit.

STEP 4

Check all surfaces (including top of buttress if applicable) and walls for level. If any surface is out of level 3/8" or more, a tapered filler is recommended.

- Please note if a filler is requested.
- Heavy glass will be cut out-of-square, so no filler is required.

STEP 6

Determine showerhead position as if looking at the shower from the outside, and mark drawing with an "X"
