Welcome to the Fairview Black Simmental Bull Sale

We are proud to welcome you to our 5th Annual on-property sale and this year we are offering 47 Black Simmental composite bulls, of which 43 are Homozygous polled.

We experienced a very dry 2023 going right through till mid-November for only 8 inches of rain and then luckily receiving over 10 inches of rain for the last six weeks of the year. To date for 2024 we have received 20 inches of rain, bringing our total rainfall for the summer period to over 30 inches. We hope everyone else has also enjoyed a well-earned wet summer and plenty of pasture growth.

To demonstrate our commitment to providing sound functional cattle that perform in all environments, our sale bulls were given no extra assistance during the dry period last year, receiving only dry lick and running on very sparse low-quality pasture.

Our job as a seedstock producer is to continually raise the bar and we believe our approach of letting our cattle experience nutritional stress gives the superior genetics an opportunity to rise to the top.

Our profit driven focus to providing commercial relevant bulls is evident in this year's draft with 70% of bulls being better than breed average for their All Purpose Index, 79% ranked above average for weaning weight EPD and 77% catalogued are above breed average for yearling weight. Also demonstrating the versatility of the Black Simmental, 68% of our sale draft ranked better than breed average for their Terminal Index, providing the cattleman with an option for any commercial joining.

Behind every good bull is an even better cow and our no-nonsense commercial focus on our breeding herd was very evident in our 2023 joining. Conducting a whole of herd Artificial Insemination program and achieving 75% pregnancy in the first two cycles of AI, and a further 10% pregnant to our clean up bulls for a total PTIC of 85%. With Embryo transfer also being incorporated into our 2023 breeding program. This was all achieved in a 44-day joining window and before any benefit from the early summer rain.

We look forward to seeing you on sale day and please feel free to contact us if you would like a prior inspection or if you require any further information.

Tony & Roslyn

Programme

Inspection – 10.00am

Bull sale – 1.00pm

Complimentary morning tea and lunch will be provided.

Post-sale refreshments will be available.

**TO BE SURE OF A CATALOGUE
PLEASE BRING THIS ONE TO THE SALE**

Disclaimer: Buyers please note that all reasonable care has been taken in the preparation of this catalogue and that the information is correct at the time of publication. However, the vendor and their agents do not accept any responsibility for errors or misrepresentation of information included in this catalogue. Prospective purchasers should satisfy themselves by inspection or otherwise as to the accuracy or interpretation of the information included in this catalogue

FAIRVIEW - 2024 BULL SALE

Visitor Safety - PEOPLE ENTER THE SALE YARDS AT THEIR OWN RISK. Children are not permitted to enter the pens. All care is taken to ensure livestock pose a minimum threat; however, we cannot predict or guarantee a bulls behaviour. All sale bulls have been assessed for temperament and are quiet to handle under normal circumstances. Sale day places bulls under stresses foreign to their normal routine. Use common sense while inspecting the bulls remembering not to get too close and to give an area of relief away from any pressure you or others may be applying to them.

Inspection of Bulls - Bulls will be penned by 10.00am on the morning of the sale for inspection. Presale inspections are encouraged by appointment with the vendor. All photos and videos were taken during the week of the 10th of June 2024.

Location - 461 Redford Road Mungallala, head north at the pub and follow bitumen for 4.6 km then turn left and follow driveway 1km to cattle yards.

Selling System - Sale of animals will be conducted under the Helmsman Auction System. All animals are sold exclusive of GST. Sale will be interfaced with Auctions**Plus**.

Phone Bidding - Phone bidding can be arranged prior to the sale by contacting selling agents:
Elders Mitchell - David Phillips on 0427 746 947 or Elders Stud Stock - Michael Smith on 0428 541 711.

Rebate - A rebate of 4% is offered to outside agents nominating and accompanying buyers to the sale. A rebate of 2% is offered to outside agents nominating buyers to the sale. Outside agents wishing to nominate a buyer must do so in writing 24 hours prior to the sale and settling within seven days.

Health - All bulls have undergone an extensive vaccination programme including 3 germ, 7 in 1, Pestiguard., Vibrio, Long range botulism and 3 day vaccination with boosters due 2025. Any bulls requiring further vaccinations that are not included in our programme will be held by the vendor until immunised. Bulls are DNA sire verified, vet checked and soundness evaluated as well as semen motility and morphology tested. Fairview is a JBAS7 property.

Transport – To make getting your bull home stress free and to streamline the delivery process, we offer free delivery within a 200 km radius of vendor and free freight to major selling centres outside of this radius in QLD and NSW. Bulls will be delivered as close as possible to their final destination - transport from drop off is the responsibility of the purchaser.

Insurance – Ownership is transferred to the purchaser on completion of the sale, including animals remaining on the vendors property. We recommend you insure your animals against injury and death. An Elders representative will be available on sale day to assist with insurance.

Guarantee - To the best of our knowledge all bulls are in sound working order and have been independently structurally assessed as well as veterinary evaluated for structural and reproductive soundness, in the event of a bull proving to be infertile or incapable of natural service within 12 months of the purchase date, the vendor will credit the purchase price, less the salvage of the bull, provided the problem is not caused by injury, illness or disease incurred after taking delivery. Claims must be accompanied by a relevant veterinary certificate if requested by vender for the conformation of any claim.

Bringing Your Bull Home – We recommend that when you bring your new bull home you have some other cattle in the yards (not bulls), so they have some company to settle in with. Feed them in the yards and give them time to settle into their new surrounds.

Breed Codes - SI = Simmental AA = Angus BR = Belmont Red CC = Charolais

About Us

Fairview Black Simmentals is owned and operated by Tony Horvath and Roslyn Ware. Consisting of the properties Fairview (3466 acres) and Cochranes (2530 acres) we are situated 5km north of Mungallala in Western Queensland. We originally ran the properties as a breeding and fattening operation producing EU and Jap Ox bullocks and then later as an Organic breeding and finishing property.

Black Simmentals were first incorporated into the base herd in 2009 and proved to be an immediate success. Our turn off was in high demand and our bullocks would grade consistently well, hitting market specs and achieving high MSA compliance. In 2016 we came to believe our herd had more to offer the beef industry and the decision was made to register our entire female herd with the Australian Simmental Breeders Association and performance recording began.

Our first Black Simmental bulls were sold by private treaty in 2018 and we have been holding an annual on property sale since 2020. To accelerate genetic progress, we now conduct a whole of herd AI program every year introducing genetics from leading herds throughout Australia, America and Canada.

Herd Management

The Fairview Black Simmental herd has its genetic evaluations performed by International Genetic Solutions with animals recorded on the CGen system and registered with the Australian Simmental Breeders Association. Coupled with genomics we believe we are getting a complete picture of an animal's genetic potential which further empowers us to select the best animals to suit the Australian production system.

Birth weights and calving ease are recorded, followed by 200 day weaning weights and docility scores, 400 day weights and 600 day weights are also recorded. All bulls have a scrotal circumference measurement at 400 days as a measure of puberty and sexual maturity, structural assessments are performed at 600 days and all bulls and replacement heifers are scanned for eye muscle area, intra-muscular fat and also rib and rump fat distribution.

Mature cow weight, body condition scores and hip heights are recorded on cows at weaning time as a measurement of female efficiency. All calving dates and joining history are submitted on breeders to establish gestation length and Stayability EPD's.

At calving, cows are given an udder score on teat size, udder evenness and udder suspension as well as a calving body condition score; with any cows outside of acceptable limits removed from the breeding herd. Our cows are never drenched or treated for buffalo fly or lice and are exposed to the rigours of the natural environment; it is a management decision to let a cow experience some stress so that we can ultimately select for adaption.

Our females must be able to perform under conditions, just like those found in most commercial operations. Selection is placed on females that reach puberty early, are efficient and live long productive lives. Our typical joining spans 44 days beginning with the use of trait leading sires in a synchronised artificial insemination programme. This is then followed by another cycle of heat detection AI on any repeats. Then our resident cover sires are introduced, all resulting in a uniform and consistent calf crop.

Our calves are born in the late winter frost; they must hit the ground, stay healthy and grow. Females that have a difficult calving, have poor disposition, or fail to bring a calf home at weaning are removed from the breeding herd.

Understanding EPDs and \$ Indexes

A guide to EPDS and the IGS genetic evaluation system.

Expected Progeny Differences (EPD): EPD are the most accurate and effective tool available for comparing genetic levels. In using EPD, the difference between

two sires' EPD represents the unit difference expected in the performance of their progeny. For example, if sires A and B have EPD of +10 and -5, a 15-unit difference would be expected in their progeny (moving from -5 to +10 yields 15 units). Key to using EPD is knowing what units they are expressed in. For example, if the above case referred to weaning weight EPD, A would be expected to sire 15-pounds more weaning weight than B. If calving ease were the trait, A would be expected to sire 15-percent more unassisted births in first-calf heifers; in other words, if B sired 30 assists in a group of 100 heifers, we'd expect A to require 15 assists. A percentile-ranking chart is required to determine where a bull's EPD rank him relative to other bulls in the breed. For percentile rankings or more detailed information about EPD and \$ indexes visit www.simmental.org. Listed below are the units ASA EPD are expressed in:

All-Purpose Index (API): Dollars per cow exposed under an all-purpose-sire scenario. (See below for more details.)

Back Fat (BF): Inches of backfat.

Birth Weight (BW): Pounds of birth weight.

Calving Ease (CE): Percent of unassisted births when used on heifers.

Carcass Weight (CW): Pounds of carcass weight.

Maternal Calving Ease (MCE): Percent of unassisted births in first-calving daughters.

Milk (MLK): Pounds of weaning weight due to milk.

Marbling (MRB): Marbling score.

Maternal Weaning Weight (MWW): Pounds of weaning weight due to milk and growth.

Ribeye Area (REA): Square inches of ribeye.

Stayability (STAY): Percent of daughters remaining in the cowherd at 6 years of age.

Terminal Index (TI): Dollars per cow exposed under a terminal-sire scenario. (See below for more details.)

Weaning Weight (WW): Pounds of weaning weight.

Yearling Weight (YW): Pounds of yearling weight.

Yield Grade (YG): Yield grade score.

\$ Indexes: Though EPD allow for the comparison of genetic levels for many economically important traits, they only provide a piece of the economic puzzle. That's where \$ indexes come in. Through well-conceived, rigorous mathematical computation, \$ indexes blend EPD and economics to estimate an animal's overall impact on your bottom line. The same technology that led to the dramatic progress in swine, poultry and dairy genetics over the last several decades was used to develop the following \$ indexes:

All-Purpose Index (API): Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.

Terminal Index (TI): Evaluates sire for use on mature Angus cows with all offspring put on feed and sold grade and yield.

Using API and TI: First, determine which index to use; if you're keeping replacements use API, if not, TI. Then, just as with EPD, zero in on the unit difference between bulls. (As described above, index units are in dollars per cow exposed.) The difference can be used to determine how much a bull is worth compared to another. Or, put another way, how much you can pay for one bull compared to another. For example, when buying an all-purpose-type sire, you can quickly figure a bull scoring +100 for API is worth an extra \$6,000 over a +50 bull if both are exposed to 30 cows over 4 years ($\$50 \text{ diff.} \times 30 \text{ hd.} \times 4 \text{ yr.} = \$6,000$). A percentile-ranking chart is required to determine where a bull's index value ranks him relative to other bulls in the breed. For percentile rankings or more detailed information about EPD and \$ indexes visit www.simmental.org.

EPD Information, IGS and the CGen Platform

One of the major changes is the breeding figures being reported as Estimate Progeny Differences (EPDs), rather than estimated Breeding Values (EBVs). The difference between the two is simple.

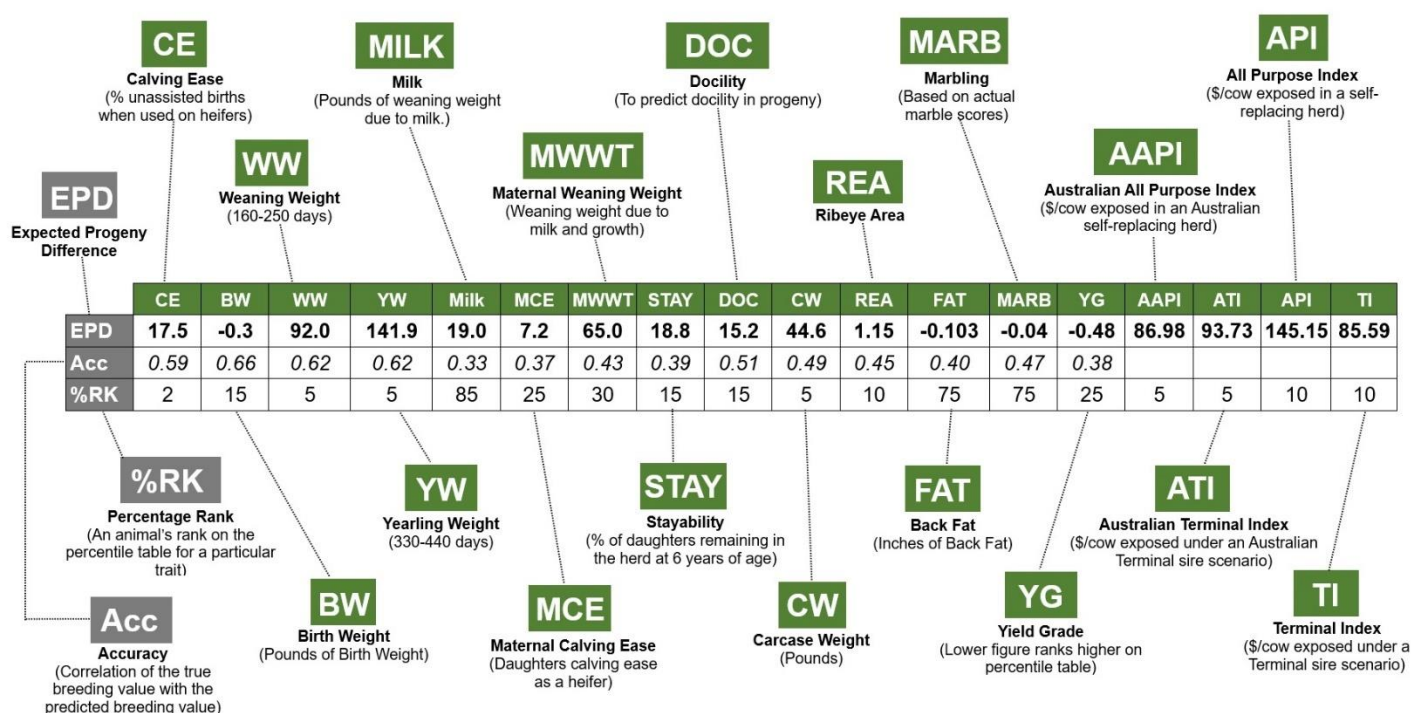

Effectively, an EBV is an animal's own genetic value for a particular trait. However, the animal can only pass half of this onto their progeny. EPDs have the "half" already accounted for. That is, an EPD is the genetic merit of an animal's progeny – what they will pass onto their progeny.

International Genetic Solutions can incorporate an animal's genomics into its performance data. All animals in the Fairview Black Simmental bull sale have been DNA profiled with Genomic Enhanced EPDs.

Simmental Australia's Newly Developed \$ Indexes

Simmental Australia's newly developed Australian \$ Indexes will be available to be viewed alongside the other EPDs on the CGEN system. The two new Indexes, the Australian All-Purpose Index (AAPI) and the Australian Terminal Index (ATI) are specifically formulated to reflect the weighting of the economic relevant traits to the Australian farming system, given Australian production systems, input costs and payment grids. They are the result of more than 6 months of research and development by the board with the help of Dr Michael MacNeil of Delta G in the USA.

The board is very proud of the new Australian \$ Indexes and believe they will play a pivotal role in ensuring Australian producers best utilise the IGS data to breed cattle relevant for the Australian market, under Australian production systems.

Black, Red, SimAngus and SPR Register Breed Average

	CE	BW	WW	YW	Milk	MCE	MWWT	STAY	DOC	CW	REA	FAT	MARB	YG	AAPI	ATI	API	TI
EPD	10.2	2.3	76.7	115.8	21.1	5.6	59.4	15.3	12.3	27.8	0.82	-0.077	0.10	-0.38	60.97	53.37	124.33	75.61

Beef Class Structural Assessment System

Structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognised that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability. Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer, feedlot and thus reducing the overall productivity of the Australian Beef Industry.

Over the past decade, use of the Beef Class Structural Assessment System in the seedstock industry has produced a marked improvement in herds which have shown commitment to using the information appropriately. Through these dedicated breeders, there has been a flow on effect of structural improvement throughout all sectors of the beef cattle industry.

Jim Green and Liam Cardile of 'BEEFXCEL' service many of the leading seedstock herds in Australia. 'BEEFXCEL' is not involved in any genetic marketing or specific breeding advice and therefore has no conflict of interests to influence their stock appraisal.

The integrity of the structural data provided by 'BEEFXCEL' is recognised throughout the industry as Jim and Liam are fully INDEPENDENT assessors.

All the Fairview sale bulls were assessed by Liam Cardile of 'BEEFXCEL' on the 11/04/2024.

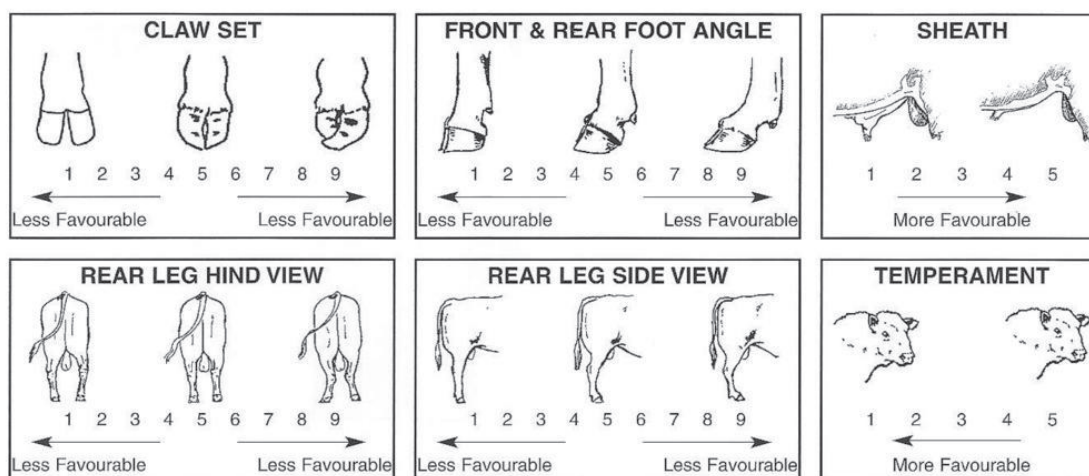

How to Use The Beef Class Structural Assessment System

The Beef Class Structural Assessment System uses a 1-9 scoring system:

- A score of 5 is ideal (Note: Except for Temperament where a Score of 1 is ideal).
- A score of 4 or 6 shows slight variation from ideal, but this indicates most animals. An animal scoring 4 or 6 would be acceptable in any breeding program.
- A score of 3 or 7 shows greater variation but would be acceptable in most commercial programs.

However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal.

- A score of 2 or 8 are low scoring animals and should be looked at closely before purchasing.
- A score of 1 or 9 should not be catalogued and are considered culls.

AuctionsPlus

How to Register and Bid on AuctionsPlus

1

Go to www.auctionsplus.com.au to register at least 48 hours before the sale.

2

Select **"Sign Up"** in the top right hand corner.

3

Fill out your name, mobile number, email address and create a password.

4

Go to your emails and confirm the account.

5

Return to AuctionsPlus and log in.

6

Select **"Dashboard"** and then select **"Request Approval to Buy"**.

7

Fill in buyer details and once completed go back to Dashboard.

8

Complete buyer induction module (approx. 30 minutes).

9

AuctionsPlus will email you to let you know that your account has been approved.

10

Log in on sale day and connect to auction.

11

Bid using the two-step process – unlock the bid button and bid at that price.

12

If you are successful, the selling agent will contact you post sale to organise delivery and payment.

For more information please contact us on:

Phone: (02) 9262 4222

Email: info@auctionsplus.com.au

Proclamation has been acclaimed as Sugar's greatest and most proven son. However, behind every good bull is an even better cow.

Miss Sugar's accolades are numerous and extensive. She boasts 191 donor and 4 natural progeny, an influential dam with a proven EPD profile that is next to impossible to find. In most of her matings she has produced a son that has ultimately gone on to outperform its sire.

She has amassed over \$1.5 million in progeny sales and in 2023 she sold for \$210,000 as an eight-year-old cow.

We purchased Woonallee Legacy L183 in 2017 and to date he has grossed over \$500,000 in progeny sales.

Legacy is the first calf out of Webb Upgrade J662 and when we look at her photograph she exudes power cow. J662 has earned her stripes the old-fashioned way by producing progeny that perform.

Still active as an 11 year old cow and she has found her way into the donor pen in the Woonallee Simmental herd.

The Fairview Programme... our Belief and Commitment!

At Fairview we understand that our role as a seedstock producer comes with a lot of responsibility. We have long held the belief that a successful beef breeding operation is built around durable females that have fertility, milking ability, good dispositions and longevity.

Our females must be able to produce and wean an exceptional calf on an annual basis and to also demonstrate efficiency on grass. It's these cows that make a positive impact on our breeding programme and it's from these cows that the best new generation heifers and bulls are retained.

We believe generational turnover is vital to accelerating genetic progress and we expect our heifers to produce right up there with their mothers and to continue to improve as they mature. The key to achieving this is getting them mated right and to be using the best predictable sires that are available.

This year's sale team have been produced with this commonsense approach. They are represented by some very influential sires that have the unique genetic combination of maternal and fertility traits, as well as performance that is matched with carcase quality.

A feature of this year's sale draft is a large offering by WS Proclamation (26 sons), a truly unique individual. His genetic credentials place him among the most elite sires, proven by his multi-trait top EPD rankings. His sons have topped sales across the United States and his daughters are the envy of cattleman for their fertility, quiet temperament, broody phenotype and excellent udders. Proclamation (now deceased) consistently sires impressive performance, extra volume, good feet and structure, with his progeny bringing added value to the marketplace.

Our standing sire Woonallee Legacy L183 is represented with 11 sons in the sale team. He is one of the most successful bulls we have owned, with progeny sales exceeding \$500,000. A great structured bull, genetically well balanced, and the fleshy type that you just can't get any more meat on. He is wide based, thick, deep and long. Not only has he proven himself with his growth and carcase, but he also has maternal power and is producing some exceptional daughters.

BBS True Justice is represented by 3 sons, he offers calving ease and growth in the one package. A slick coated free moving bull with excellent phenotype that is backed by maternal excellence. His dam BBS Miss Justice has earned her stripes as a prolific donor with high Stayability EPD. She sits in the top 1% of the breed for her milk and maternal weaning weight EPD.

Other successful sires represented include Woonallee Pharaoh and Woonallee Playboy.

Our sale bulls have been prepared with longevity in mind, after weaning they have been grown out on grass. From 80 days prior to sale, they have been given access to a meal-based production lick as well as oaten hay.

We strive to take the guess work and assumption out of purchasing a Fairview bull. We present our bulls in ready to work condition, showing enough growth and muscle expression to do their genetics justice. They have undergone extensive measuring and weighing throughout their life, as well as pre-sale semen and morphology testing. Sale weights and supplementary pre-sale fat and muscle scanning is also undertaken, as well as all bulls undergoing a comprehensive vaccination programme.

With the combination of phenotypical raw data, IGS technology and Genomic enhanced EPDs, all coupled with structural soundness, you are best informed to make your selection come sale day. This will all obviously be influenced by your own breeding programme as well as the markets that you intend to supply.

Tony Horvath

A slick coated three-year-old, had a foot injury last year when we catalogued the sale bulls. Has been run on grass all his life and was cracking 1000 kg when weighed mid-June 2024. Low birth weight with impressive growth for age and ranked in the Top 10% of his contemporary group with his raw 600 day Fat and IMF scanning.

Was used over yearling heifers following AI in our 2023 joining. Closely mirrors his outstanding sire Proclamation for genetic performance. Has seven traits in the Top 10% of the breed or better. Low birth weight EPD matched with breed leading growth, milk and carcase EPDs. Has all his dollar indexes in the Top 20% of the breed or better. Would suit a variety of commercial joining options.

Traits Measured: GL,CE,BWT,200WT,400WT,600WT,SS,FAT,EMA,IMF,DOC,Genomics

A very correct thick set Proclamation son. A heifer's first calf that certainly does not lack in genetic performance. A great balanced set of EPDs and the type of bull we strive to breed.
