Which Cycle is Which?

All animals go through what is called a life cycle, from when they are born to when they have babies and those babies start the cycle again.

Cut out the animals on page 15 and glue them in order on the life cycles on this page and page 14. There is the life cycle of a frog, a moth and a duck.

Sorting and putting things in order is one of my favourite things to do! It’s a very important part of coding and computer science.
