CONTENTS:
14.0 SSILA SUMMER MEETING: CALL FOR PAPERS
14.1 LANGUAGES IN NEED OF STUDY: ALEENORIAN, SIOUAN, CHACOAN
14.2 AKAN LANGUAGES: CURRENT RESEARCH AND PERSPECTIVES
14.3 SSILA-95
14.4 MEXICAN RESOURCES NEEDED
14.5 DAKOTA READER AVAILABLE FROM SSILA MEMBER
14.6 MESOAMERICAN SIGNS LANGUAGE?

14.0 SSILA SUMMER MEETING: CALL FOR PAPERS

SSILA will organize a meeting on American Indian linguistics at the University of New Mexico, Albuquerque, during the weekend of July 8-9, in connection with the 1995 LSA Linguistic Institute. The meeting will include both a morning and an afternoon session on Saturday, July 8, and either one or two sessions on Sunday, July 9, as the number of submissions warrants.

* Papers: Papers on any topic in American Indian linguistics are welcome. A short abstract should approximately 150 Words should be submitted to the Summer Meeting Program Committee no later than May 1 1995. Unless the number of submissions does not allow this, each paper will be allotted at least 20 minutes with extra time for discussion.

* Location and Accommodations: The meeting will take place on the campus of the University of New Mexico, in facilities reserved for the 1995 Linguistic Institute and related activities. Information on short- and long-term accommodations (on-campus dorms and off-campus motels) is available from SSILA or from the Linguistic Institute housing office (linginst@unm.edu).

Abstracts should be sent to: William Bright, SSILA, 1625 Mariposa, Boulder, CO 80302 (tel): 303/938-9116; fax: 303/492-4416; internet: bright@spot.colorado.edu).

14.1 LANGUAGES IN NEED OF STUDY: ALEENORIAN, SIOUAN, CHACOAN

Lynn Byler's request for a list of American Indian languages in urgent need of study has so far elicited the following responses. Further correspondence on this matter is invited. —VD

ALEENORIAN LANGUAGES
From Ives Goddard (mnhan0099siu.siv.si.edu): 10 Feb 1995:
First on the list for Algonquian is Arapaho. There are still good speakers among the Southern Arapaho communities. Salzmann's 1983 analysis used a binucleotide transcription, resulting in much variation. The extremely important and interesting prosodic system has never been worked out. What are the occurring, contrasting patterns? What role do the pitch accent patterns play in the morphology? Etc. Some people have dabbled in Arapaho, but as far as I know no one is actively working on it now.

There is also an important gap and opportunity afforded by Sauk, spoken by a group of people in the Oklahoma Sac and Fox. We think this is similar to Fox (Mesquakie), but no one has done extensive work in the Sauk community. It probably holds some interesting surprises. It will certainly provide an opportunity to study language change on the micro level, as there are extensive innovations, like those in contemporary Mesquakie. Since these changes are not postdating the split between the communities, questions of diffusion, drift, and what have you arise.

SIOUAN LANGUAGES
From John E. Koons (koontz@alpha.bldr.nist.gov): 10 Feb 1995:
The following Siouan languages could certainly do with more study, and may still have speakers. All Siouan languages are endangered, though some have a fairly large number of speakers still surviving, in some cases down to children, in other cases all older. Unmentioned language is believed to be extinct. These are variously known, or in particularly desperate shape.

Crow
*Hidatsa
*Manan (very few speakers left; most speakers may be working with someone, so some coordination is required)

14.1 LANGUAGES IN NEED OF STUDY: ALGONQUIAN, SIOUAN, CHACOAN

Lynn Burley's request for a list of American Indian languages in urgent need of study has so far elicited the following responses. Further correspondence on this matter is invited. --VG

ALGONQUIAN LANGUAGES

From Ives Goddard (mahan009@svm.si.edu) 10 Feb 1995:

First on the list for Algonquian is Arapaho. There are still good speakers among the Northern and Southern Arapaho communities. Salzmann's 1920s analysis used a bivinque transcription, resulting in much variation. The extremely important and interesting prosodic system has never been worked out: what are the occurring contrasting patterns? What role do the pitch accents play in the morphological structure? Some people have dabbed in Arapaho, but as far as I know no one is actively working on it now.

There is also an important gap and opportunity afforded by Sauk, spoken by a few dozen (?) among the Oklahoma Sac and Fox. He thinks this is similar to Fox. Isolated data has been collected by linguists but no one has done extensive work in the Sauk community. It probably holds some interesting surprises. It will certainly provide an opportunity to study language change at the micro level, as there are extensive innovations, like those in contemporary Mesquakie. Since these changes seem to postdate the split between the communities questions of diffusion, drift, and what have you arisen.

SIOUAN LANGUAGES

From John E. Koontz (koontz@alpha.blw.nist.gov) 10 Feb 1995:

The following Siouan languages could certainly do with more study, and may still be studied with speakers. All Siouan languages are endangered, though a fairly large number of speakers still surviving, in some cases down to children. In other cases all older. Unmentioned languages are believed to be extinct. I have starred languages which are particularly poorly known, or in particularly desperate shape.

Crow (almost)
Mandan (very few speakers left; most speakers may be working with someone, so some coordination is required)
Most of these languages have fairly good morphological information available by now, and nearly all are out of print, never in print, or not yet in print. But since for recent work with Crow and Dakotan, the syntax has been mainly neglected, and, unfortunately, some basic phonological/phonetic questions remain unanswered for almost all of them! In all cases the available text collections are comparatively small, sometimes very small, and always inadequate and should be heavily augmented if possible. Most of these languages still need good, published dictionaries, though such projects are being worked on for some, and raw materials for others are languishing. All of the languages could use quality classroom instructional material in a fairly urgent way.

I might add that even the extinct Siouan languages need considerable additional work, and that the rate of recruitment of new Siouanists even for philological and editorial work has not been very high.

**Chacoan Languages**

From Jose Braumanstein (jab@ilomita.org.ar) 14 Feb 1995:

The usual classification of the surviving languages of the Gran Chaco -- excluding a western branch of Guaraní -- distributes fifteen languages into five linguistic families. Only two of these families have received systematic attention, in recent years: Guaycurú, specifically Roa and Tapiwá, and Guaraní. The absolute priority for description and analysis in the area must be the last remaining speakers of Waka (Churup) (Waka family), living in Chaco Province, Argentina. Also the four languages of the Mascoi family (Kasiki, Anaga, Sanapaná and Lenguá), and the two Chaco languages (Chamacoco and Aparo) of the Paraguayan Chaco, have never been described scientifically.

We at the Centro del Hombre Antigo Chaqueno (3460 Las Lomitas, Prov. de Formosa, Argentina) do not believe that the usual classification is of doubt, validity, because the bulk of the existing descriptions ignore the fact that many languages are in fact complex or single links in dialectal chains. We offer our aid and cooperation to any scholars who would like study the languages of the Gran Chaco.

14.2 SMITHSONIAN CATALOGUES NOW ACCESSIBLE BY TELNET

The Smithsonian Institution Research Information System (SIRIS) is a computerized catalogue of research catalogs maintained by the Smithsonian Institution's Libraries, Archives, and Research Units. TELNET access to this database has recently been enabled. The address is SIRIS.SI.Edu. Both

VI100 and TN3270 formats are available.

Presently there are four catalogs available on SIRIS:

1. The Smithsonian Library Catalog
2. The Art Inventories Catalog
3. The Archives and Manuscripts Catalog
4. The Research/Bibliographies Catalog

Of these, SISLA members will probably be most interested in the Archives and Manuscripts Catalog. This database consists of approximately 20,000 records compiled by five archival units of the Smithsonian. The subcatalogs listed below can be searched together or separately:

- The Archives of American Art (AAA) catalog describes papers of artists, art workers, art historians, collectors, and others; records of art galleries, museums, and art organizations; and interviews from AAA's oral history project.

- The Archives Center of the National Museum of American History (NMAH) catalog describes hundreds of collections of manuscripts and visual, magnetic and electronic documents related to the mission of the National Museum of American History, especially the history of advertising, history of technology, and social and cultural history, as well as selected individual items.

- The Human Studies Film Archives (HSFA) catalog describes film and video collections of historical, archeological, and ethnographic significance, including educational ethnographic films, unique research footage produced as part of anthropological research, and travelogues by amateur and professional filmmakers.

- The National Anthropological Archives (NAA) catalog describes collections of historical manuscripts relating to Native American cultures; administrative records of the Dept. of Anthropology; professional papers of anthropologists; records of anthropological organizations; art and photographs.

- The Smithsonian Institution Archives (SIA) catalog describes records documenting the history of the Smithsonian Institution since its founding in 1846. Research in the fields of science, art, and history; papers of staff; records of scientific research, exhibits, and its oral history and video-history programs.

For further information contact George Bowman, Smithsonian Institution Research Information System, Bldg. 21, room 340; 400 Jefferson Dr. S.W., Washington, D.C. 20560 (tel): 202/357-4238; fax: 202/96-2487; internet: imgoe100 @ si.vim.s1.edu; bitnet: imgoe100 @ s1vms.

14.3 SILNA-95

The Linguistic Institute for Native Americans, Inc. (LINA) sponsors the annual Summer Institute of Linguistics for Native Americans (SILNA). In 1995, the SILNA program will be held on the UIW of New Mexico campus and will be partially integrated with the Linguistic Institute. LINA will sponsor the annual Summer Institute. The early start of the program is intended to allow participants to attend the Linguistic Institute courses
14.4 CHOCTAW RESOURCES NEEDED

From Harry Harm (harry_harm@psil.org) 18 Feb 1995:

My wife, Geri, and I are members of SIL working as consultants to the Choctaw Bible Translation Committee (CBTC). The CBTC was formed to help preserve the Choctaw language and culture through Bible translation, literacy and cultural studies. They will be co-sponsoring the first Choctaw Language Institute (CLI) at Pearl River, Mississippi from March 13-15. The CLI will teach Choctaw reading, writing, music and translation.

The CBTC has published the following items:
- Ruth/Luil (1862 & 1993 translation) $3.50
- Genesis (1867 edition w/corrections and glossary) $4.50
- Chahta Vba (Nt Jaloa Holigo - second edition) $4.00
- Atalaw 121 (Psalm 121 bookmark; 1868 & 1992 translation) $0.10
- Chocao Phonics Book and a translation of Jonah.

According to the research which we have done, below is a list of scripture published in Choctaw to which CBTC has no access.

<table>
<thead>
<tr>
<th>TITLE</th>
<th>DATE</th>
<th>PUBLISHER/TRANSLATOR</th>
</tr>
</thead>
<tbody>
<tr>
<td>Josiah Chronicles</td>
<td>1866</td>
<td>Cyrus Byington</td>
</tr>
<tr>
<td>Sara, Nehemiah, Esther</td>
<td>1866</td>
<td>Cyrus Byington</td>
</tr>
<tr>
<td>Jonah</td>
<td>1866</td>
<td>Mission Press, Park Hill</td>
</tr>
<tr>
<td>Daniel, Jonah, Nahalphi</td>
<td>1867</td>
<td>Rev. Tom Billy</td>
</tr>
<tr>
<td>Elia (In Choctaw)</td>
<td>1879</td>
<td>M.H. McKinney (Yale B.Div.)</td>
</tr>
<tr>
<td>Job</td>
<td>1929</td>
<td>Munro Ishcomer (Tallahassee)</td>
</tr>
</tbody>
</table>

The CBTC would like to gain access to some of Old Testament volumes, especially Jonah, so that they can be reprinted. We are hoping that some university library or museum may have copies. If you have any leads please pass them on to us. Thanks in advance for any help you can give.

--Harry J. Harm, P.O. Box 623, Philadelphia, MS 39350

14.5 DAKOTA READER AVAILABLE FROM SSILA MEMBER

From Charles H Thode (thode0001@gold.tc.umn.edu) 20 Feb 1995:

I have been a member of the Society for a number of years. I have just self-published "Dakota Ndayakapi", a collection of 16 Dakota stories translated from English into Dakota. All the texts are in Dakota and there is a Dakota-English glossary at the end. Also, one of my second year Dakota students did wonderful illustrations for the stories. The price is $5.00 not including $2.00 for postage. If it is less I will refund the extra money. The price of the book is actually the price I cost to type it. However, if I wish I had my own copy machine and bind it. Anyone interested in buying a copy can either contact me by e-mail or write to: Charles Thode, 305 44th Avenue SE, Minneapolis, MN, 55414.

14.6 MESOAMERICAN SIGN LANGUAGE?

From Shirley Silver (silver@sonoma.edu) 22 Feb 1995:

Can anyone help put a student of mine who's looking for material which sheds light on the mention in a popular article (in New Mexico Journal) of a sign language used as a trading language throughout northern Mexico and into the southwest (also onto the southern Plains?) Presumably this mode of communication was associated with 1) Casas Grandes, a trading center on the Chinashuhu, and 2) the Mexico traveling merchants known as pochteca.

Any leads or other information you can provide will be greatly appreciated, by both the student and me.

-- Shirley Silver, Dept. of Anthropology & Linguistics, Sonoma State University, Rohnert Park, CA 94928.
