

IoT *for Facility Managers*

Easily set alerts for the thresholds you care about

Simple online configuration allows you to choose the conditions that trigger alerts and which team members should receive them. You can have peace of mind wherever you have cell service—receive alerts via text, email or call. Never be caught off guard by facility emergencies again.

Get real-time alerts for events that require your attention

We can supply you with wireless sensors to let you know if there is motion after hours, a water leak, changes in temperature or humidity, or other unusual events.

Access a dashboard for each of your devices

Securely view readings from all your sensors online or via mobile app. You can even compare the readings for multiple facilities or multiple areas of the same facility. Basic monitoring and mobile apps are included (Android and iOS).
