Foam Container, Void Fill and Protective Packaging Alternative Guide

Expanded polystyrene (EPS) foam packaging is one of the top contributors of environmental litter, causing negative impacts to wildlife, waterways, and other natural resources, as well as littering our communities and natural areas. It is lightweight, breaks apart easily, and does not readily biodegrade. In addition, foam containers and loose fill packaging, such as packing peanuts, are not accepted in most recycling programs in New York State because the foam is difficult to recycle and has a low value. For these reasons, certain expanded polystyrene foam products will be banned in New York to protect the environment, our communities, and to support sustainable materials management.

Effective January 1, 2022, expanded polystyrene, single-use foam food and beverage containers, and polystyrene loose fill packaging materials are banned in New York State. No covered food service provider or store (retail or wholesale) will be allowed to sell, offer for sale, or distribute disposable food service containers that contain expanded polystyrene foam in New York. In addition, no manufacturer or store will be allowed to sell, offer for sale, or distribute polystyrene loose fill packaging (commonly referred to as packing peanuts) in the state. See the New York State Department of Environmental Conservation's website for more details.

With a preference for reusable, compostable, recyclable, and recycled content, this document provides alternatives to expanded polystyrene food and beverage containers, as well as polystyrene packing peanut alternatives. The guide includes specific itemized products, approximate unit pricing *, and links to purchase for EPS alternatives and will be maintained and periodically updated by the New York State Center for Sustainable Materials Management. Thank you in advance for your participation in reducing foam pollution across New York State.

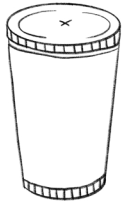

This document is based on the 2015 [Alternatives to Foam Food Containers](#) guide provided by the City of San José and adapted for New York State.

**Please note the prices per unit listed for each item are to serve only as an approximation. Prices in this document version are as of November 2021 and are subject to change. They may not represent the lowest cost products at any given time.*

Disclaimer: Approaching Ban of Per- and Polyfluoroalkyl Substances (PFAS) in Food Packaging

This guide consists of products that may contain Per- and Polyfluoroalkyl Substances (PFAS) as an agent to make the packaging water and grease resistant. PFAS are a group of chemicals used to make fluoropolymer coatings and products that resist heat, oil, stains, grease, and water. Common examples of PFAS-treated packaging are plant-based single-use containers that are marketed as water- or grease-resistant. Effective December 31, 2022, the prohibition on PFAS in food packaging (ECL Article 37, Title 2) will ban the distribution, sale or offering for sale in New York, of food packaging that contains intentionally added per- and polyfluoroalkyl substances (PFAS). This prohibition applies to paper, paperboard, and other materials originally derived from plant fibers. The law does not apply to plastic, aluminum, and other options that are not derived from plant fibers. The best source of information on whether food packaging contains intentionally added PFAS is likely to be the manufacturer or supplier of the packaging. To ensure compliance with the law when the prohibition takes effect on December 31, 2022, DEC recommends that anyone purchasing food packaging for sale or distribution or anyone who sells food contained in such packaging consult with the manufacturer or supplier as soon as possible to confirm that PFAS is not intentionally added to the product.

More information on the PFAS in Food Packaging Law can be found at <https://www.dec.ny.gov/chemical/124367.html>.

APPENDIX - Additional Resources

Go Foam Free Polystyrene Foam Ban

<http://on.ny.gov/FoamFreeNY>

This link includes detailed information concerning the New York State Expanded Polystyrene Foam Container and Polystyrene Loose Fill Packaging Ban. Additionally, you will find instructions regarding alternatives, exemptions from the ban, and available hardship waivers.

Alternatives Reference Guide

https://www.dec.ny.gov/docs/materials_minerals_pdf/newenglishfoamalt.pdf

https://www.dec.ny.gov/docs/materials_minerals_pdf/newspanishfoamalt.pdf

Compiled by the NYSDEC, this is a reference guide focused on specific material alternatives to single-use expanded polystyrene foam food and beverage containers and expanded polystyrene foam loose fill packaging. The guide includes information on navigating green terms when it comes to manufactured materials. Further, this reference guide defines alternative materials such as bagasse, bamboo, plant fiber, polylactic acid, paper fiber, and other assorted plastics.

Foodware Safety: Per- or Polyfluoroalkyl Substances (PFAS)

<https://ceh.org/products/single-use-containers/>

In addition to hosting a groundbreaking report that identifies a wide variety of disposable foodware products containing toxic PFAS, this link provides resources and general information from the Center for Environmental Health (CEH) on purchasing power in moving towards a safer and more toxic-free foodware society. The Center for Environmental Health protects people from toxic chemicals by working with communities, consumers, workers, government, and the private sector to demand and support business practices that are safe for public health and the environment.
