Job Title: Associate Product Manager (internships also available)

Location: Virtual

Headquarters: San Francisco, CA

Alife Health is a technology company that was founded with the mission of helping people have healthier children. By using advancements in artificial intelligence, data science, and software, Alife is developing technology to increase the pregnancy outcomes associated with IVF (in-vitro fertilization) and create tools that will benefit clinical institutions and patients alike.

Overview

We are looking for a talented product manager to help develop Alife’s technology through intuitive and user-centric focused design. In this position, you will work closely with product management, UX design, and engineering teams to plan and shape products that improve clinical outcomes and create customer delight.

The ideal candidate for this position has a deep interest in medical device technology, and has an engineering, business, or design background. He/she is also excited to work in a highly technical, fast-paced, and cross-functional startup environment.

We’d love to have you on the team if you are a self-starter, are detail oriented, and have a deep passion for customer experience and advancing medical technology.

Core Job Responsibilities

- Understand clinical processes, decision points, and pain points in the fertility space
- Conduct user research and product hypothesis testing with customers
- Define product vision and translate user needs into clearly written requirements
- Work with UX to prototype wireframes and storyboards to convey product functionality
- Develop a business case and go to market strategy
- Plan and manage product development with engineering and design teams, maintaining a user-centric mindset
- Help define the regulatory and clinical testing strategies
- Plan and execute product launch
- Stay up to date on clinical, scientific, and technical literature

Required Knowledge/Skills, Education, And Experience

- Has a strong technical aptitude and an interest in artificial intelligence and medical devices
- Has a bachelor’s degree in engineering, business, or design
- Experience working in a medical device company or regulated industry is a plus
- Has some experience researching and identifying market gaps
- Has experience initiating projects and leading teams
- Can clearly communicate concepts, rationale, and complex ideas
- Is organized, self-directed, efficient and able to manage priorities and expectations
