Improving your reliability

Update: Eastlake Avenue East main replacement project

May 19, 2021

Dear Neighbor,

Puget Sound Energy crews have been working in your area for the last two months replacing portions of the existing underground natural gas main and select service lines. This is a courtesy letter to provide you with an update on our progress and the expected timeline for the remainder of the project.

Project update

Natural gas crews from PSE and InfraSource continue their work to replace portions of the existing underground natural gas main and select service lines (see map on reverse for details on current work area). Construction began in March of 2021 and is anticipated to be completed in August. Road restoration crews from AA Asphalting, Inc. are following closely behind our natural gas crews, working to restore the impacted roadway and/or sidewalks. Construction work hours continue to be Monday through Friday, 9 a.m. to 3 p.m.

While the gas work is ongoing, you can expect

- Noise from trucks and heavy machinery
- Traffic control flaggers and signs are guiding vehicles and pedestrians safely around the work areas
  - There are lane, sidewalk and crosswalk closures near the project areas. Detour signs are posted
  - The bus stop on Eastlake Avenue East between East Roanoke Street and East Louisa Street has been moved 150’ north of its current location
- Some street parking has been impacted. “No parking” signs have been placed in parking areas
- **As the work continues, some customers along the project route may experience a temporary interruption of natural gas.** We’ll notify impacted customers prior to beginning work requiring an interruption in service. For customers who will have their service interrupted, work inside customer homes may be required to re-light appliances after the service interruption. Our technicians are trained to protect against coronavirus while doing this work. If coronavirus concerns prevent entry, our technician or customer service representative can explain your options. Please call 1-888-225-5773 for more information
- Restoration crews continue to follow behind the natural gas crews to complete final restoration of the impacted roadway and/or sidewalks

Thank you for your patience as we work to complete this important project. If you have questions or concerns, please contact me at the information below and reference project #109114546.

Sincerely,

John Guay, PSE Project Manager
