Rapha Racing Ltd.
An example of SLCP adoption

PLANS FOR SLCP ROLLOUT

- Already using SLCP in apparel and for gloves, luggage, shoes, sunglasses, water bottles.
- Would like to extend to other product ranges including skincare, coffee cups, product care.
- Requires commitment from more brands to help drive the value of SLCP in these sectors.

GOAL

"To use SLCP to measure more than 90% of Rapha’s annual production volume by 2023"

WHY RAPHA CHOSE SLCP...

- Concerns over traditional audit systems and the lack of industry level improvement
- The need to re-evaluate Rapha’s proprietary system

BENEFITS OF USING SLCP

- Reduces audit fatigue by enabling facility ownership and data sharing
- No set cadence allows collaborative remedial action
- Two-step self-assessment followed by a verification process encourages the facility to engage with and understand the issues
- Allows comparability of data
- Able to easily track year on year improvements and recurring issues

"At Rapha we see industry-wide use of SLCP data as a massive opportunity to drive scaled, measurable improvements in social and labour performance."
