

SLCP deeper in the supply chain

CASE STUDY

Lenzing Group is an Austrian-based fiber and raw material producer, operating as an **upstream supplier** in the textile supply chain, and **100% of their facilities are implementing SLCP**.

What benefits is Lenzing experiencing from adopting SLCP?

Standardization	Efficiency	Transparency
		
Harmonized data reduces audit fatigue and ensures comparability across sites.	Ability to reuse verified data across multiple customers and platforms saves time and resources.	Third-party verification enhances transparency by providing credible evidence of facility assessments.

How is SLCP helping Lenzing meet HRDD requirements?

- ✓ **Risk identification:** Helps identify potential human rights risks across global facilities, a key step in the Human Rights Due Diligence (HRDD) process.
- ✓ **Credible data:** Provides trusted evidence for due diligence reporting obligations under directives such as the CSRD and for future CSDDD implementation.
- ✓ **Action planning:** Assessment results guide prioritization and integration of improvement measures into HRDD action plans.

As a fiber and raw material manufacturer, we expect that brands and retailers will increasingly use SLCP deeper in their supply chains, which would help reduce the number of additional audit requests we receive — leading to more efficiency and alignment across the industry.

- Dr. Krishna Manda, Lenzing Vice President Corporate Sustainability
