

SPRING

Say goodbye to Orion, as it drops below the western horizon. Leo is still high overhead, and if you have dark skies, it's a great place to hunt for galaxies. Hercules, with its great globular cluster (M13), begins rising from the east. Soon,

M13 will be added to your nightly stargazing repertoire. You'll know warmer weather is on its way when the summer triangle (Deneb, Altair, and Vega) climbs into the evening sky.
