

**WE JUST
WANTED
TO SAY
"HELLO!"**

IN THE COMMUNITY

Pride Plumbing is busy getting ready for some community events this Spring and we really hope we'll see you there!

- ★ Remodelrama Trade Show: May 7th & 8th
- ★ Verona Street Animal Society's Fast & Furriest Event: June 4th
- ★ Veterans Outreach Center's Pound the Ground 5K: August 24th

SPRING CLEANING TIPS

- ★ Check for bird nests in plumbing vent pipes.
- ★ Make sure yard drains, gutters, and downspouts are cleaned out, open, and free of debris.
- ★ The first time you use your outdoor faucet, make sure the water is flowing freely. If it is dripping or if there is a leak inside your home, you may have had a frozen pipe that cracked and needs to be replaced.
- ★ Ensure that shower drains have a drain protector hair catcher/strainer to prevent hair, soap, and debris from clogging the drain line.
- ★ Check toilets for hidden leaks by adding food coloring to the toilet tank. The food color will appear in the bowl within 30 minutes if there is a leak.
- ★ Check that the water heater temperature is set no higher than 120 °F to prevent scalding and save energy.
- ★ Drain & flush your water heater tank every 6-12 months to remove any sediment more efficient & last longer.
