# A Performance-based Sustainability Assessment tool for Road pavements and Railway tracks

**Dr. Davide Lo Presti**

Principal Research Fellow @ University of Nottingham/NTEC

# SUP&R ITN Research Project

A decorative graphic consisting of three overlapping, curved bands. The top band is light blue, the middle band is grey, and the bottom band is light blue. They are arranged in a way that they appear to be part of a larger, incomplete circular or semi-circular shape.

# SUP&R ITN

Sustainable Pavement & Railway  
Initial Training Network

# How can we design Sustainable technologies for **Road Pavements** and **Railway Trackbeds** ?

**Design:**

- Pavement/Railway structure
- Design Life/Mechanical performance prediction
- M & R strategies

Good? Bad?

**Sustainability Assessment**

- Sustainability Performance prediction and rating

**Final Design**

Good

# Sustainability Rating Systems (SRS) in Transp.Infr.Eng

## Infrastructures

- CEEQUAL (UK)
- Envision (USA)
- BREEAM Infrastructures (NL)
- IS rating system (AUS)

## Road Infrastructures *(in use)*

- GREENROADS (USA)
- FHWA INVEST (USA)
- GreenPave (CA)
- BE<sup>2</sup>ST- In-Highway
- I-LAST (IL, USA)
- GreenLITES (NYS, USA)
- LCE4ROADS

# SRS Conclusions and suggestions

- SRS are usually **qualitative based**, although few recent tools are defined for a quantitative assessment
- A third-party assessment system allows behaviour changing, however **self-assessment is a good first step for design workshops**
- **European, Flexible, User-friendly framework mainly based on quantitative measurements is needed!**

# SUPER MCDA Tool

**Performance-based  
Sustainability assessment tool  
Road Pavement and Railway trackbed technologies**

# STEP 1: Framework - Concept

# STEP 2: Definition of indicators (short list)

# STEP 2: Definition of indicators (short list)

# STEP 2: Definition of indicators (short list)

## STEP 2: Definition of indicators (railways)

<i>Indicator</i>	<i>Means objectives</i>	<i>Description</i>
Greenhouse GHG (primarily CO <sub>2</sub> emission)	Healthy Climate and Resources	Various gaseous compounds (principally carbon dioxide) that absorb infrared radiation and trap heat in the atmosphere.
Energy consumption	Healthy Climate and Resources	Amount of energy consumed in the process of construction or maintenance.
Recycled content (Slag and ashes, RAP)	Healthy Natural Environment	Recycled content recovered from existing structure of total discarded/waste material.
Water depletion	Healthy Natural Environment	Amount of water used for the required operations of construction or maintenance.
Acidification potential	Healthy Natural Environment	Increase in the concentration of the hydrogen ions (H <sup>+</sup> ) in water and soil. This alters the pH of that medium which may cause damage to the organic and inorganic materials.
Eutrophication potential (EP)	Healthy Ecosystems	Potential presence of nutrients that can cause over-fertilisation of water and soil which in turn can result in increased growth of biomass.
Ozone depletion potential (ODP)	Healthy Ecosystems	Indicates the potential for emissions of chlorofluorocarbon (CFC) compounds and other halogenated hydrocarbons to deplete the ozone layer.
Safety impact	Healthy People	Accidents in property damage, medical, and legal costs.
User comfort	Healthy People	Factor that evaluates passenger's feeling about vibration environment.
Noise or vibration reduction	Healthy Community	Reduction of noise/vibration level in order to reduce the acoustic impact on the users and population.
Life cycle cost	Healthy Economy	The total cost of the purchase and installation, and the use and the maintenance during the life cycle.

# STEP 3: EU survey with Stakeholders (weights)

Approximately **fifty** stakeholders have been interviewed. It was asked them to judge the relative importance of the means objectives and sub-categories.

- **public/institutional representative**
- **public administration,**
- **self-employed professional,**
- **universities,**
- **Enterprises**
- **other social agents**

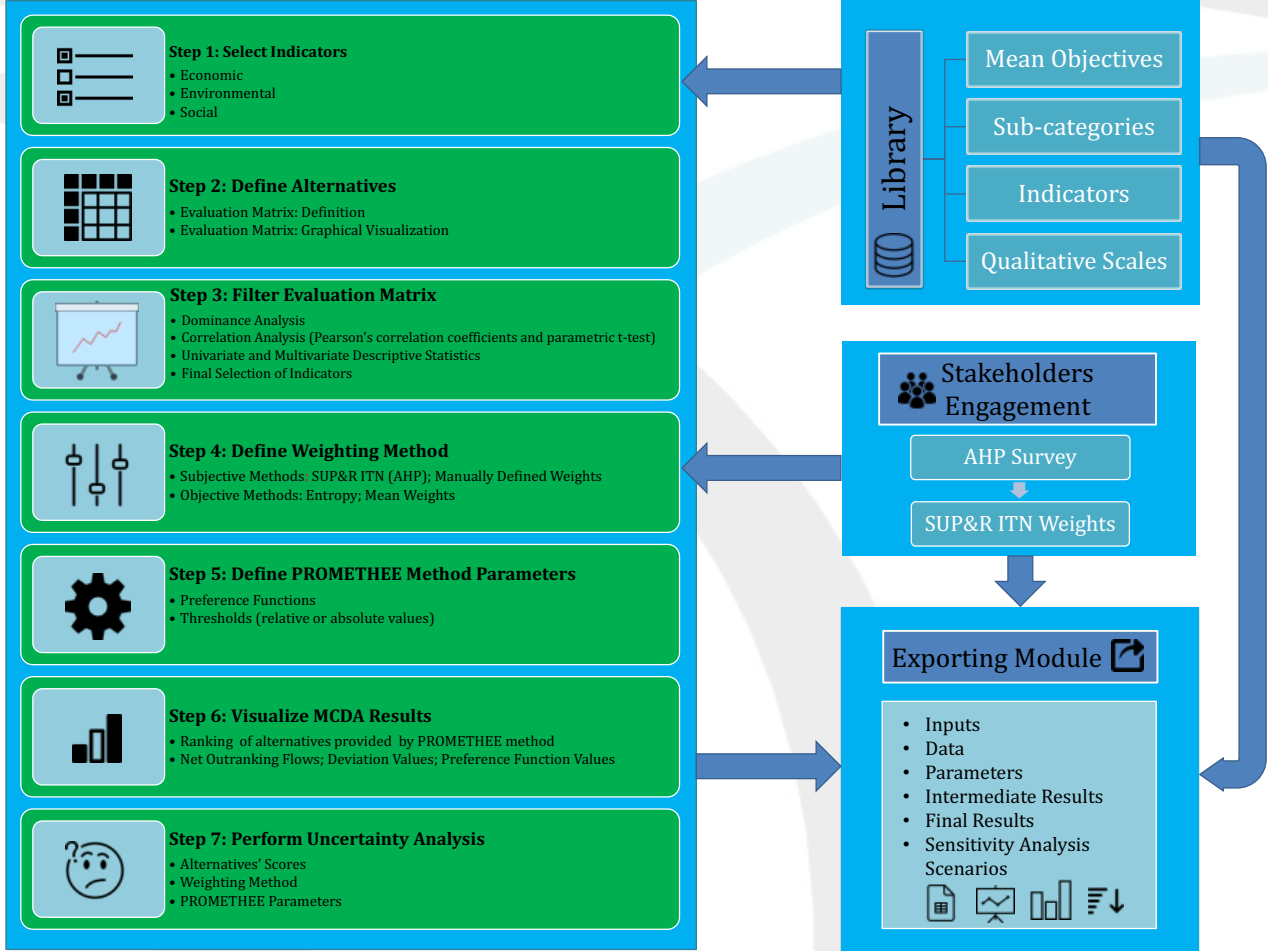

Means objectives	Weights of the means objectives	Sub-category	Weights of the sub-categories
Healthy Climate and Resources	11,25	Recycling and Materials Conservation	15,63
		Long-life Pavements	11,97
		GHG Emissions and Non-renewable Resources	11,87
		Land Resources	11,06
		Energy	10,83
		Local Materials	10,56
		Climate Change	10,42
		Renewable resources	10,25
		Albedo	7,46

# Step 4 – SUSTAINABILITY ASSESSMENT TOOL (MCDA)

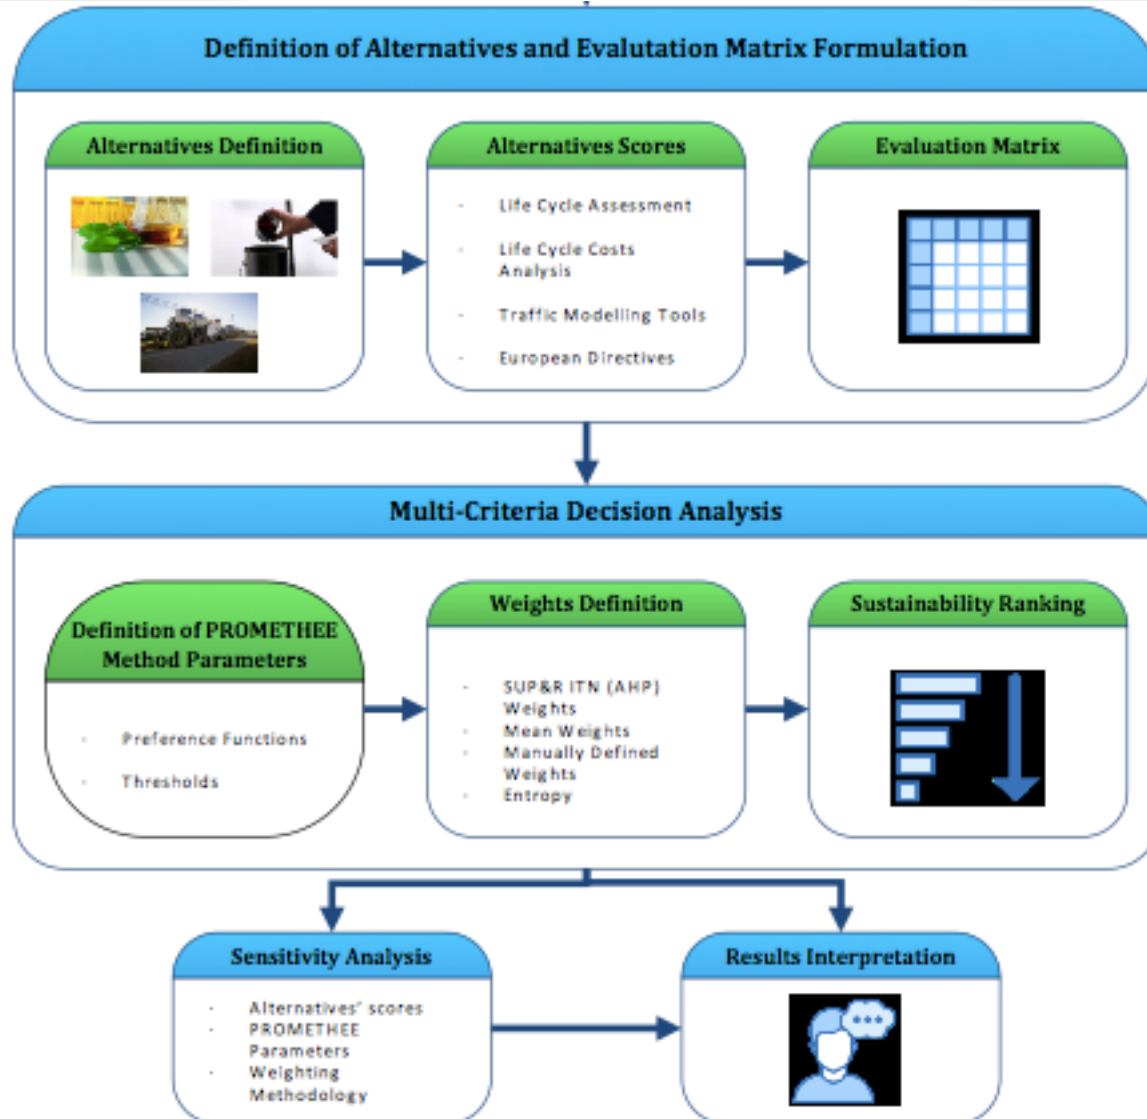

**DEFINITION OF  
ALTERNATIVES,  
MCDA and SA**

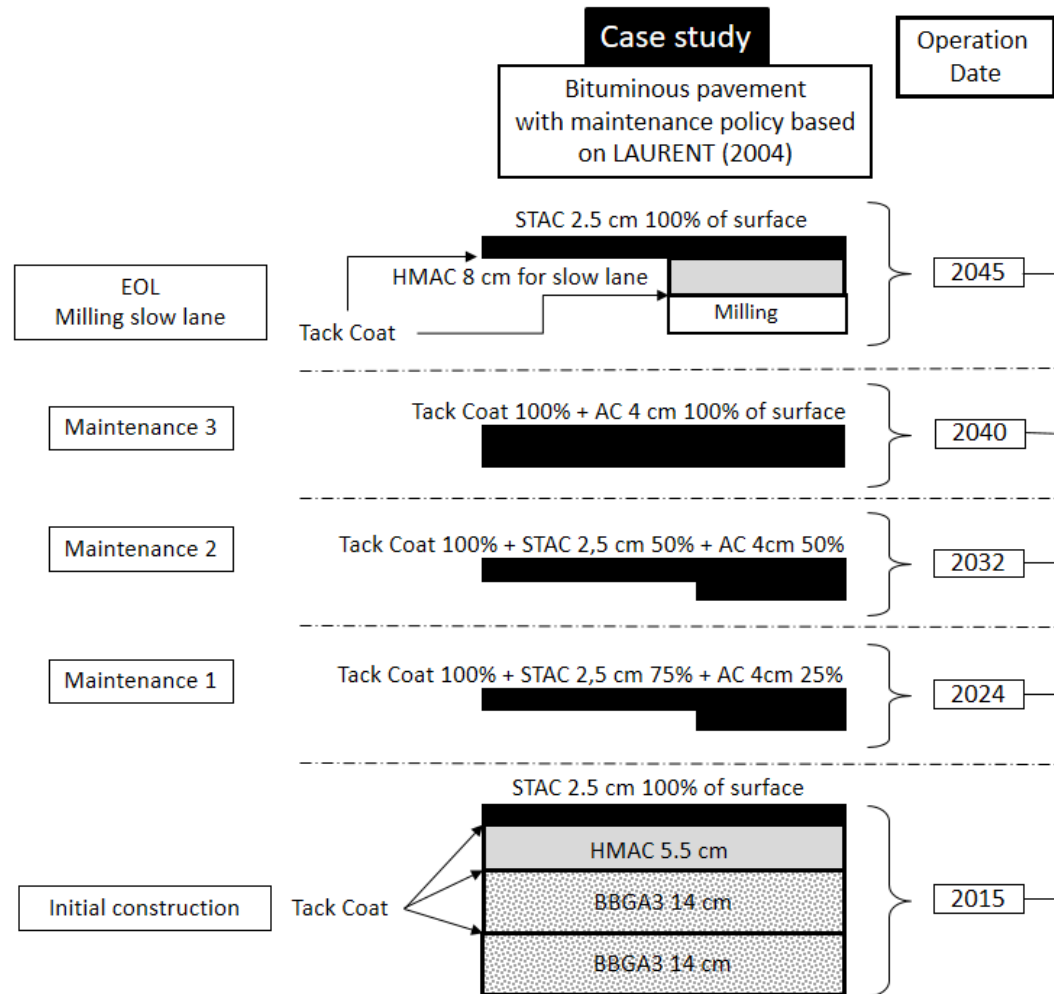

- ✓ European
- ✓ Multi-sector
- ✓ Flexible
- ✓ User-friendly
- ✓ Quantitative

# Step 4 – SUSTAINABILITY ASSESSMENT TOOL (MCDA)

# Case Study: Road Pavement

## Initial pavement structure and M&R plan

# Case Study: Road Pavement

## Definition of the alternative (asphalt mixtures for road surface)

Item	Type of mixture					
	HMA, 0% RAP	WMA- CECABASE®, 0% RAP	Foamed WMA, 0% RAP	HMA, 50% RAP	WMA- CECABASE®, 50% RAP	Foamed WMA, 50% RAP
<i>Virgin aggregate</i>						
Quantity (%/m)	94.4	94.4	94.4	48.4	48.37	48.36
Water content (%/a)	3	3	3	3	3	3
<i>RAP</i>						
Quantity (%/m)	-	-	-	48.4	48.37	48.36
Water content (%/RAP)	-	-	-	3	3	3
<i>Bitumen</i>						
Penetration grade	35/50	35/50	35/50	35/50	35/50	35/50
Quantity (%/m)	5.4	5.4	5.4	3.2	3.2	3.2
<i>WMA agent</i>						
Type	-	surfactant	water	-	surfactant	water
Quantity (%/m)	-	0.054	0.077	-	0.054	0.077
<i>Mixture density (kg/m<sup>3</sup>)</i>						
	2360	2340	2260	2370	2360	2360

# Case Study: Road Pavement

## Evaluation matrix

**Table 1. Evaluation matrix.**

Alternative scenario		Sustainability indicators										
ID	Name	GW (Kg CO <sub>2</sub> - eq)	ED (MJ)	S M C (% )	W C (m <sup>3</sup> )	AC (kg SO <sub>2</sub> -eq)	EU (kg PO <sub>4</sub> -eq)	SOD (kg CHC <sub>11</sub> - eq)	PM (kg PM <sub>10</sub> -eq)	TC (Hr)	LCH AC (€)	LCR UC (€)
1	HMA, 0%RAP	1257 898	69679 068	0	24 24	103 76	451 3	0.823	2871	46.1 42	12663 06	2145
2	WMA- CECABA SE <sup>®</sup> , 0%RAP	1236 348	69442 583	0	41 23	102 21	449 5	0.818	2847	40.9 21	12702 96	2042
3	Foamed WMA, 0%RAP	1223 723	68680 490	0	23 99	101 17	443 1	0.811	2809	40.9 21	12590 28	2042
4	HMA, 50%RAP	1202 024	63620 766	11	22 34	978 8	427 3	0.750	2713	46.1 42	12047 73	2145
5	WMA- CECABA SE <sup>®</sup> , 50%RAP	1181 481	63536 209	11	39 36	964 5	425 9	0.748	2691	40.9 21	12090 36	2042
6	Foamed WMA, 50%RAP	1178 377	63380 866	11	22 32	963 0	424 8	0.748	2679	40.9 21	12032 25	2042

Key: HMA- hot mix asphalt; WMA- warm mix asphalt; RAP- reclaimed asphalt pavement; GW- global warming; ED- Energy demand; SMC- Secondary materials consumption; WC- Water consumption; AC- acidification; EU- Eutrophication; SOD- Stratospheric ozone depletion; PM- Particulate matter, TC- Traffic congestion; LCHAC- Life cycle highway agency costs; LCRUC- Life cycle road user costs.

# Case Study: Road Pavement

## Define Weighting Method

The screenshot displays the SUP&R MCDA Tool interface. The main window features a sidebar on the left with a progress indicator for seven steps. Step 4, 'Define Weighting Method', is highlighted in blue, indicating it is the current step. The main area shows the 'SUP&R ITN Sustainable Pavement & Railway Initial Training Network' logo and the text 'MCDA Tool'. A dialog box titled 'Select Weighting Method' is open, allowing the user to choose between Objective and Subjective weighting methods. The Objective method options are Entropy and Mean Weight. The Subjective method options are SUPR ITN Weights (AHP) and Manually Defined Weights. The 'Confirm' and 'Cancel' buttons are visible at the bottom of the dialog box. The bottom of the main window displays a row of logos for various partners, including The University of Nottingham, Iarnród Éireann Irish Rail, UCD, Universidad de Granada, IFSTAR, URS, and Sacyr. A green bar at the bottom right of the main window indicates 'MCDA Step 6/7 Accomplished'.
