

Cyber Acoustics Launches New Line of Contact Center Headsets

Designed in conjunction with leading BPO partners, these new headsets include the technology and comfort to meet the needs of the most demanding call center environments

Vancouver, Wash., July 31, 2023 – [Cyber Acoustics](#), a leading manufacturer of reliable and affordable computer peripherals used in schools, businesses, and homes, today announced four new headsets designed for call and contact centers. Working collaboratively on technology and design with some of the world’s largest BPOs, these partners stressed the importance of having top performing, reliable, durable, and comfortable headsets at optimal prices.

The result is four new headsets catered to the needs of the contact center industry, which are the [AC-204ENC Stereo Headset](#), the [AC-104ENC Mono Headset](#), the [CA Essential Wireless HS-1500BT](#) and [CA Essential ANC & ENC Headset HS-1500USB](#). All four models feature Environmental Noise Cancelation (ENC) that minimizes background noise so customers can hear the call center agents more clearly. The HS-1500BT and HS-1500USB also include Active Noise Cancelation (ANC), which reduces background noise so the call center agents can better hear the customer. All models are compatible with customer experience (CX) platforms, as well as popular video conferencing and chat applications, including but not limited to, [RingCentral](#), [Avaya](#), [Genesys](#), [Microsoft Teams](#), [Skype for Business](#), [Zoom](#), [Slack](#), and [Google Meet](#).

The AC-204ENC provides value that rivals more costly competitive offerings

The new AC-204ENC Stereo Headset and AC-104 ENC Mono Headset were developed leveraging more than a decade of experience designing and building headsets for the most demanding environments. This experience, combined with the technology and design elements that are important to call center agents, results in value-priced headsets that meet or exceed competitive offerings in both comfort and technology.

The AC-204ENC stereo headset and the AC-104ENC mono headset are plug-and-play with no software to install, making them ideal for customer support and help desk agents who need frustration-free tech to keep them focused on turning problems into positive customer experiences. This is accomplished through:

Excellent audio quality

- Dual mic system employs ENC technology for clear voice pickup

- Flexible boom mic that is designed for placement on a wide range of head sizes, allowing for optimal voice pickup without capturing the agent's breathing
- Tethered in-line audio control module features larger buttons for quick and easy access to volume and mic mute control

All-day comfort and durability

- Small on-ear earcups provide a comfortable fit, and are double stitched for lasting durability, with leatherette for easy cleaning
- Durable, flexible, ultra-lightweight headband with padding for all-day comfort
- An ambidextrous boom mic that can be worn on the left or right side, offering employees the choice of what's most comfortable for them
- An eight-foot cable ensures easy use with desktops or laptops (2.5 feet of cable from controller to USB plug and 5.5 feet of cable from controller to headset)

Both headsets are packaged in a reusable bag, minimizing environmental impact.

The [AC-204ENC has an MSRP of \\$29.99 and is available now](#). [The AC-104ENC mono headset is also available now](#) for \$24.99. Bulk discounts are available.

The CA Essential HS-1500BT offers supervisors the freedom to move around

The CA Essential HS-1500BT features both ENC and ANC technologies, in a cost-effective, high-performance wireless headset that enables the mobility contact center supervisors require to keep call centers running smoothly. Other features of the HS-1500BT include:

- Lightweight design for all-day comfort with soft padded earcups and headband that relieves pressure on your head while providing a secure fit
- Convenient earcup controls for answering/ending calls, volume +/-, mute and busy light, as well as seamless switching between connected devices
- Mute by simply rotating the microphone boom arm up
- Battery playtime of approximately 30 hours, recharge via the included USB-C cable (headset can be used while charging)
- On-ear design reduces the uncomfortable effects some users experience when using ANC technology in over-the-ear headphones, which [The New York Times has labeled "eardrum suck."](#) This discomfort can include eardrum pain, headaches, dizziness, or nausea
- Seamlessly connects to PCs and Macs with included USB-A Bluetooth dongle for a higher-quality audio experience. It also enables connection of a second device simultaneously, such as a smartphone
- Plug-and-play headset with no software to update or install
- Includes a nylon pouch for easy storage

The [CA Essential Bluetooth Headset HS-1500BT is available now](#) with an MSRP of \$69.99.

The CA Essential ANC & ENC Headset is optimal for training and evaluation of new agents

The CA Essential ANC & ENC Headset HS-1500USB combines design and technology elements from the HS-1500BT and the AC-204ENC to create the ideal headset for training and evaluation of new call center agents. The HS-1500USB features the same comfortable, on-ear design as the HS-1500BT with the same in-line controls as the AC-204ENC. This combination allows call centers to create an optimal training and evaluation environment that enables many new agents to seamlessly cycle through the stations without having to set up equipment each time. Other HS-1500USB features include:

- ENC technology allows agents to be properly evaluated, as they are heard clearly by trainers while ANC helps them perform better by reducing background noise in the training environment
- Tethered in-line audio control module features larger buttons for quick and easy access to volume and mic mute control, while an eight-foot cable ensures easy use with desktops or laptops (2.5 feet of cable from controller to USB plug and 5.5 feet of cable from controller to headset)
- Plug-and-play headset with no software to update or install
- Includes USB-A to USB-C adapter

The CA Essential ANC & ENC USB Headset HS-1500USB will be available in September with a MSRP of \$59.99.

“Having built affordable products for demanding education environments for many years, we are uniquely equipped to address the needs of call centers and BPOs because we know what it takes to deliver a high-quality, affordable product,” said Steve Erickson, COO at Cyber Acoustics. “We have taken this experience, invested in technology, and listened closely to the needs of our BPO partners to develop headsets that address their biggest pain points. These new headsets reflect that feedback.”

Cyber Acoustics goes the extra mile for partners and customers

These products are available globally and Cyber Acoustics provides flexibility based on the needs of each individual partner and customer.

Cyber Acoustics offers the industry’s only no-cost headset recycling program, working with call centers and BPOs to properly recycle broken or unused wired headsets, from any brand, at no cost to them. Cyber Acoustics has already donated more than 7,000 pounds of e-waste for proper recycling or reuse. Learn more, or request a collection box at <https://www.cyberacoustics.com/recycling-program>.
