## **Let's stick with Biden-Harris economic policies**

Why is it so hard for Americans to believe the U.S. economy is recovering from the COVID pandemic faster than any other advanced economy in the world? The latest economic report showed that in the second quarter, the American economy's growth exceeded what many economists had anticipated. And yet, recently, a Fox Business guest said: "That's not happening". Seriously? A growing economy together with low unemployment, downward trend in inflation, and rising stock market prove the Biden-Harris Administration's economic policies are working.

On the other hand, the tariffs proposed by Trump, together with other economic proposals in Project 2025, will undo the progress made, destroy our economy, and lead to a depression. We cannot go back! This would be a disaster for all of us.

Vice President Harris has a plan to reduce the costs of gasoline, food, and housing. We need to stay the course and elect Kamala Harris as President. As a retired person on a fixed income, my future depends on it.
