

The unique design and concept offers the following benefits and features;

- The overall tower can be refined to suit a particular location or operational constraints.
- At 90m tall the tower combines the three elements of Landmark,
 Amusement Balloon Ride and Advertising Medium into a single unique architectural design.
- The tower requires a building footprint of only 143 sqm (1,600sqft) and has a diameter of 14m (46ft) making it extremely flexible in terms of the locations where it can be accommodated.
- Skyview is designed to operate all year round with potential capacity of up to 400 passengers per hour in a DDA accessible gondola.
- The flexible design provides significant opportunities for advertising, branding, corporate and special events in a unique and distinctive setting.
- Quick and modular in construction terms, whilst efficient to operate,
 Skyview is a new and unique design icon for any location offering standalone profitability.

Skyview is seeking initial busy destinations to deliver and launch the brand as a precursor to a wider expansion in the UK and overseas.
