

Are you caught up on your child's immunizations?

40%

Missed childhood vaccines (non-flu) since Feb. 2020. That is 11 million doses for illnesses like measles, rubella, whooping cough, and more.

71%

Drop in healthcare visits for 7- to 17-year-olds, ages when critical vaccines like Tdap, HPV, and meningitis

Maybe not!

Millions of children and adolescents are behind on critical immunizations that will keep them safe and allow for a return to in-person learning, or resume sports activities.

It's vital not to skip or delay your immunizations.

Without vaccinations we risk outbreaks in our communities of preventable childhood diseases that were on the rise before the pandemic.

Contact your pediatrician to check if you are on target.

The CDC and the American Academy of Pediatrics recommend every child continues to receive essential vaccinations during the COVID-19 outbreak. And federal funding covers the cost of vaccines for those who qualify. bit.ly/VFCProgram
