Specifications and Requirements

FETCO CBS-2240 Brewers have unique construction only available for these models.

Water Requirements:	Coffee Filter Size:
CBS-2240 20-75 psig, (138-517kPa) 1½ gpm/(5.7 lpm)	13" X 5 or FETCO# F002"
Optimal water hardness between 125-250 TDS (6-13 grain) Important! Please use a water filter for all beverage equipment	Temperature, as set by factory: 200°F (93°C) inside water tank (at sea level)
Water inlet fitting: 3/8 inch male flare. Brewer supplied with inlet valve adaptor for BSP to SAE	Electrical: See electrical configuration chart Pg 3.
Brew Volume: Full Batch 3.8 L/1.0 gal brew	
Brew Capacity (approximate)	Output is controlled by heater power and water temperature
CBS-2241 4-10 brews per hour	
CBS-2242 11-16 brews per hour	
Total Brew Cycle: Factory setting: 6 minutes consisting of 4 min. brew time and 2.0 min. drip delay	
Individual menu brew-process parameters are user controllable for:	
Basic user controls for brew volume, brew time, units of measure, recipe name	
Advanced user controls for pulse count, prewet percent and prewet delay, drip delay, programmable energy saving	
See pages 4-5 for how to adjust controls for temperature, brew volume, units - and all other settings	

Weights and Capacities

Fast Start Brewing

Starting The Brew

1. Turn the power switch "ON". (Twin Shown)
2. Prepare a brew basket with the correct size filter and appropriate amount of coffee. (4-8 ounces or 113-227 grams for 1 gal/3.8 liters)
3. Slide the brew basket completely into the rails.
4. Place a clean, empty, preheated dispenser under the brew basket.
5. Select a batch & touch the corresponding BREW icon (Batch #1 selected in illustration), then press "START"
6. -STOP icon will illuminate,
 -Countdown time will display, with proportional graphic circle icon
 -LED indicator will pulse.
-Opposite side BREW icons on dual brewer remain active
7. When the brew cycle is finished,
 -Spray icon will extinguish and the BREW circular icon will remain.
 This indicates that coffee may still be dripping from the brew basket
 For safety- do not remove brew basket until drip-out is complete.

Twin Brewer ready to brew.
Batch one-top left brew position selected

Brewing in process
Batch one selected

Programming

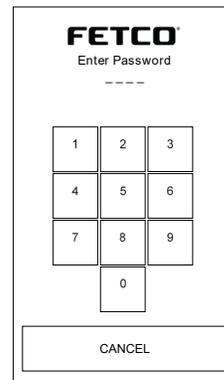

To enter programming

1. Turn the power switch "OFF", then "ON":
Bootup will begin
- Touch the cen of the screen (shown on right→)

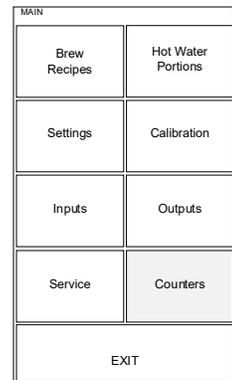

Bootup screen

2. (shown right→)
Operator password is 1,2,3,4: Note: For general use
- Service password is 9,8,7,6 Note: Do not distribute this number

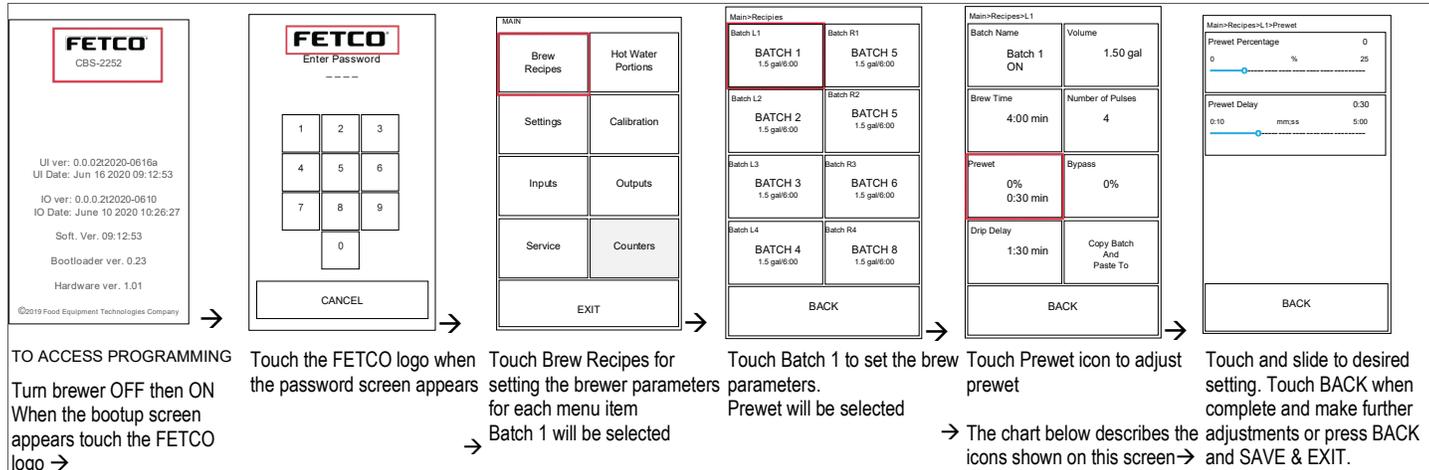

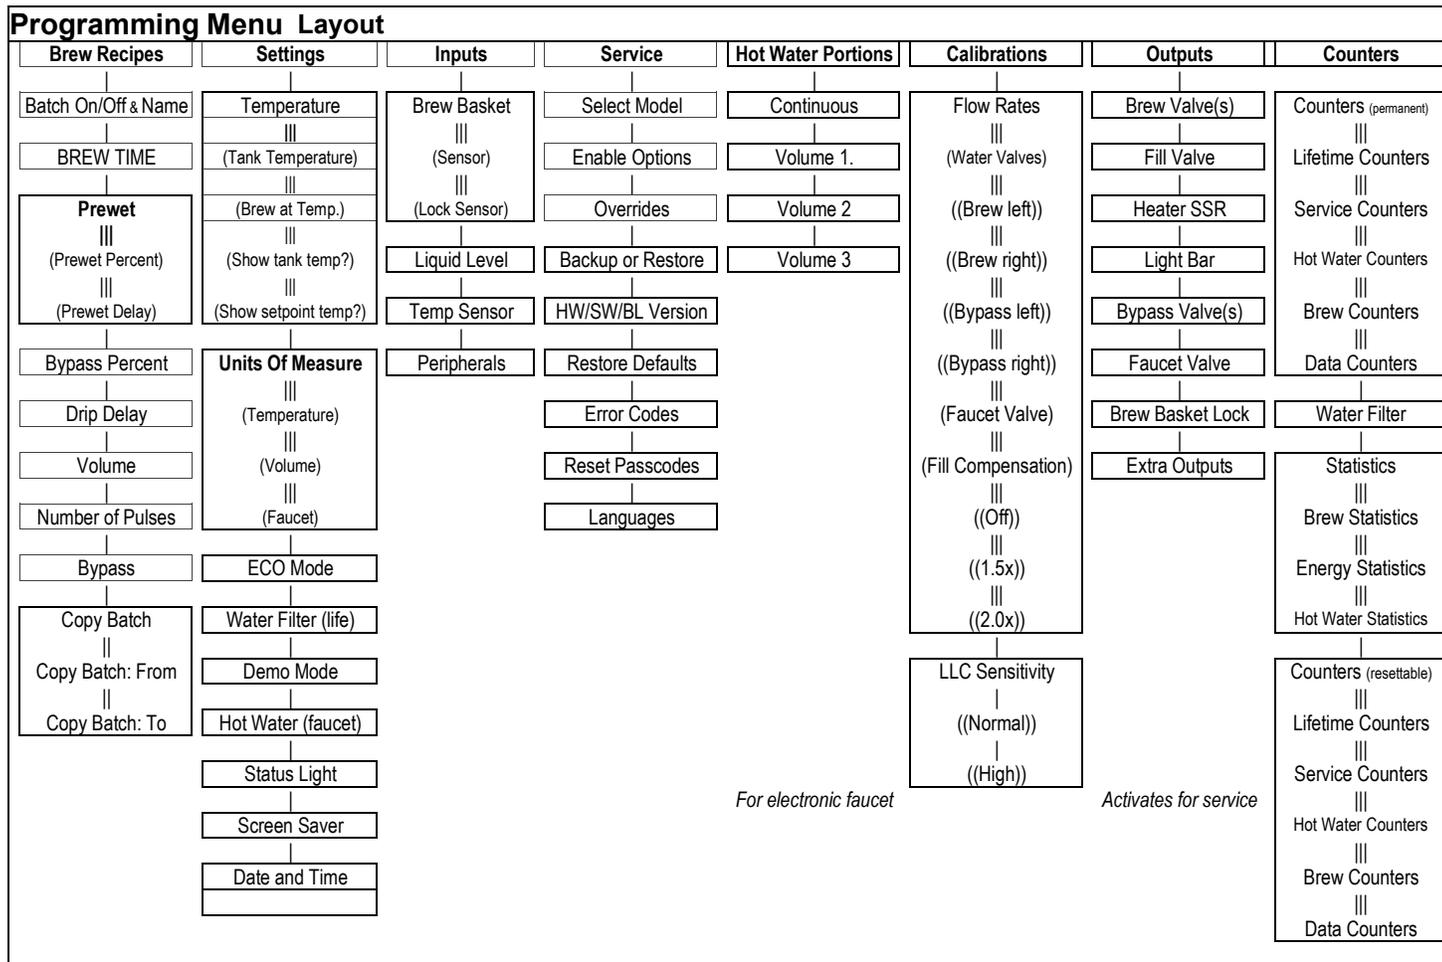

Password Screen

3. Make changes and adjustments from the Programming Menu screen
(Shown right→)
- See programming menu layout next page

Programming access

Brew Recipes	Program Items	Factory set Default	Programming Range	Notes
Batch Name	Batch On/Off	All "ON"	On/Off	Only top batch(s) are always enabled
Batch Name	Customize Name	Batch (1-4 L) (5-8 R)	Complete keypad	Scroll and tap three virtual keypads
Brew Time	Time of brew	4:00 minutes	2:00-12:00 mins/secs	Add to prewetting and drip delay times
Prewet	Prewet percentage	0	0-25% brew volume	Initial wetting to stabilize very fresh coffee
Prewet	Prewet delay time	1:00 sec.	0:10 sec to 5:00 min	Pause after coffee bed is prewitted
Drip Delay	Pause after brew	2:00 min:sec.	00.30 to 6:00	Time that brew basket remains locked during drip-out. This is a safety feature.
Brew Volume	Total volume	1 gallon/3.8 liters	0.5-1.25 gal./0.95-4.75 liters	Factory set for 1 gallon dispenser
Number of Pulses	Start/stop in brew	8	4-20	Algorithm evenly divides brew time cycle
Bypass Percentage	Diverts brew water	0	0-40% of brew volume	Affects flavor, strength and mouth-feel

Demo Mode	Brewer ON Disables valves & heaters	OFF	OFF/ON	For training and user familiarization
Hot Water	Digital H. Wtr Faucet	Auto	ON/OFF/Automatic	Automatic activates portion control
Status Light	READY LED color	White	White/Blue/Green	Color when brewer is ready to brew
Screen Saver	Covers recipe screen	OFF	ON/OFF & Timeout setting	"OFF" leaves recipe screen
Date and Time	Set unit date and time	12 hour format	12/24 hour format & date	Store in real time clock

NOTES: Brew at Temperature*

Brew At Temp: "ON"

(Default: factory programmed into brewer)

"BREW START" will not be accessible until tank temperature is at set point.

"BREW START" becomes accessible when hot water tank is at the selected temperature.

Menu screen will be dimmed if tank temperature is low

Brew At Temp: "OFF" USER SELECTABLE (Not recommended)

Allows brewing at any temperature above 170°F/77°C.

May not apply for two sided brewer if one side is in brew cycle

Altitude Correction Chart

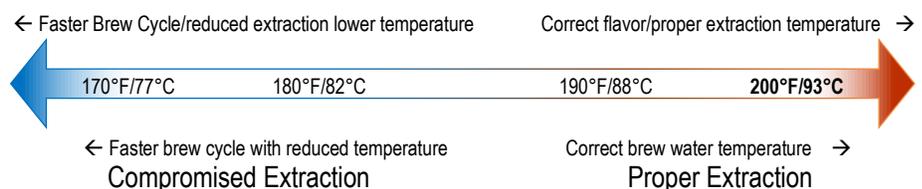

Chart to correct for altitude for boiling point in tank water temperature.

8500	2591	185	196.0	85	91.1

Brew at Temperature

Ideal brew water temperature is 200°F/93°C. After brewing, brewers can take time to recover the hot water tank temperature and signal READY to brew. This is called "recovery time". The lag in recovery time is caused by rapid brewing cycles in a rush, low power heating elements, low incoming electrical voltage, water supply temperature, even the barometric pressure.

Operators will adjust the "Brew At" temperature to allow the brewing at lower temperatures. This will allow a *slightly* faster recovery time and give a small increase in brew cycles per hour.

Reduced brew temperature will always compromise the quality of the finished brew and lower the temperature of the customers coffee.

Error Codes (From SERVICE – Page7)			
DO NOT CLEAR ERROR CODES UNTIL ERROR IS IDENTIFIED AND CORRECTED →Contact factory or specialized personnel for error codes			
Code	Description	Possible Cause	Corrective Action
001	Software error-error on start up or corrupted software	Improper start-up or shutdown	Restart, if still fault: reload software
002	Internal flash corrupted internal data memory malfunction	Error found in cyclic redundancy check CRC	Restart, if still fault: reload software If not corrected: replace board
010	Front U/I board loses communication with the interior O/I board	No communication between front panel	Cycle brewer Off then On. Check cable connections
011	Front U/I board bad communication with the interior O/I board	Disrupted communication Cable connections loose	Cycle brewer Off then On. Check cable connections
Error codes 10 and 11 may be generated by loose connections, electronic interference, or a software/bootloader issue. For assistance by email: open the SERVICE menu and go to the <u>HW/SW/BL Version</u> . Send a cellphone picture of this screen to techsupport@fetco.com with the serial number of the equipment and your return phone number. For live service, write down the screen information or have the HW/SW/BL Version available and contact FETCO by phone at (800) 338-2699 option 2) to discuss with Technical Service. (Email support is usually faster) The correction for ERROR 10 or 11 may require a simple Off/On power cycle or a bootloader/firmware update that can be sent by email. Contact FETCO as above if cycling power or connections do not correct the fault.			
050	Short-circuit in temperature probe	Probe failure.	Replace probe.
051	Open temperature probe.	Bad probe connection, or probe failure.	Check all connections. Replace probe if necessary.
100	Initial Fill Error. Initial fill time took longer than expected after powering up.	Water supply flow rate is too low, fill valve is stuck, water line kinked or closed.	Reboot machine. If persists-investigate cause of low flow rate. (Clogged water filter, kinked line, stuck fill valve)
101	Error on refill-. Tank did not refill within expected time.	Water supply flow rate to hot water tank is too low, or fill valve stuck or damaged (SEE PAGE 13)	Check water supply line. Flow should be 20-75 psig, (138-517kPa) >1gal/3.8L/min Investigate cause of low flow rate. If the flow rate is in range-replace fill valve
200	Heating flatline-Tank is boiling	Heater is on, temperature is not rising/dropping	High elevation correction. Bad heaters or temperature probe or position
201	If the hot water tank heaters are turned on during a heating cycle and tank temperature is not increasing according to software logic and the tank temperature is below setpoint	1) Failure of SSR, high limit, temperature probe, or heating element. 2) Water being removed by hot water faucet during heating (control displays "heating")	1)Test and check SSRs, high limit devices temperature probe. Check heating elements with current clamp, replace if necessary. 2)Advise staff to refrain from taking large amounts of water from hot water tank, especially during "heating".
202	Heater Shorted or Stuck SSR	Heater is off and heating SSR is stuck "ON"	Check ohms on heater (15-60Ω). SSR may be stuck in ON mode-replace SSR.
255	Keyboard [HID] error (<u>H</u> uman <u>I</u> nterface <u>D</u> evice)	Usually from longer than 10 seconds' contact. Or faulty reassembly after service	Restart, if still fault: reload software. If mechanical: replace module
NO BSKT <u>Insert Brew Basket</u>		Brew basket must be in place This is a SAFETY FEATURE	Insert brew basket into brewer rails to enable brewer

Flow Rates Faucet Valve	For automatic hot water faucet	1500 ml/min	Faucet 1500 500 ml/min 5000 -----○-----	To compensate variations in timed dispense from automatic hot water faucet
Fill Compensation	Slow Flow Compensation	OFF	○ Off ○ .. 1.5x ○ 2.5x	Use for FloJet bottled water supply or for reduced water supply from mains.
Display			Display % Contrast 70 10 -----○----- 100 Brightness % 70 20 -----○----- 100	
LLC		NORMAL	○ Normal ○ .. High	Liquid level control sensitivity. Normal for most water. High is for reverse osmosis water or very pure water.

How to calibrate the flow rate

Set the flow rates of the brewer valves to adjust for over or under potting.

Built-in algorithms in brewer controller software corrects brew parameter to customer preferences or to trim variations in flow control components. The control software uses the new flow rate entered in the CALIBRATION screen to adjust and correct the amount of water delivered by the valve.

Increasing the flow rate value DECREASES the volume of brew water dispensed

Decreasing the flow rate value INCREASES the volume of brew water dispensed

Flow rate adjustment will control all batches made by the valve. All batches on the side of the valve will be adjusted, (left or right)

-Obtain the VOLUME DISPENSED of water only, by brewing a batch without coffee or filter paper.

-Obtain the PROGRAMMED VALUE of the same brew. This is displayed on the home screen in the batch box

-Obtain the CURRENT SETTING for the flow rate from the brewer. Do this by entering PROGRAMMING and Tap to "CALIBRATION" then, tap "Flow Rates" and then "Water Valves". The valves flow rate is in the top right corner.

Using the values obtained above to obtain the new flow rate setting to correct the volume dispensed:

Divide the volume dispensed by the programmed volume and then multiply by the current setting

$$\frac{\text{VOLUME DISPENSED}}{\text{PROGRAMMED VALUE}} \times \text{CURRENT SETTING} = \text{NEW FLOW RATE SETTING}$$

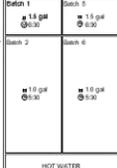

-Enter programming mode, tap to "CALIBRATION"

-Tap back to "Flow Rates" and then to "Water Valves"

-Enter the new flow rate into the calibration slider for the valve tested

Note: values for brewers set in gallons are in decimal format. Place all quantities in ounces and divide by 128 (One gallon = 128 ounces) to obtain decimal format → 3 quarts delivered = 96oz, 96oz ÷ 128 = 0.75 gal.

Example below shows shortpotting of 16oz over 0.08 gal. batch corrected by recalibration using the formula above

Obtain Volume Dispensed	Obtain Programmed Value	Obtain Current Setting	Use the formula above	Enter the New Flow Rate
<p>Example: A CBS-2242 delivered 3qts or 6oz over the 0.8 gallon (102oz) setting for Batch 2-Left Side (96oz ÷ 128 = 0.75) The value is 0.75</p> 	<p>The Programmed value for batch 2 -left side of the CBS-2242 is on the home screen in the batch box. The value is 0.8 gallon</p>	<p>The valves flow rate is in the top right corner Brew Left 0.50 (gal) 0.40 gal/min 0.58 -----○----- The value is 0.50</p>	<p>$\frac{0.75}{0.8} \times 0.50 = 0.47$ The new flow rate is 0.47</p>	<p>Brew Left 0.47 (gal) 0.40 gal/min 0.58 -----○----- Enter new setting on the slider as shown and EXIT to save. Retesting recommended</p>

By entering the new flow rate number into the brewer, the software automatically corrects the volume discrepancy

Outputs	Program Items	Factory set Default	Programming Range	Notes
These settings are used to activate individual controls for testing verifications and servicing operations				
Brew Valve(s)	Momentarily operate Left or Right Brew valves		Brew Left Right  	Have dispenser under spray head! Touch to activate flow
Fill Valve	Momentarily operate fill valve		Fill 	Have dispenser under spray heads! Touch to activate flow
Heater SSR	Turns on all heaters		Heater 3 sec max 	Activates SSRs to turn on heaters
Light Bar	Momentarily operate light bar(s)		Status Light 	
Bypass Valve(s)	Momentarily operates Left or Right Bypass valves		Bypass Left Right  	Have dispenser under bypass port! Touch to activate flow
Faucet Valve	Momentarily operate faucet valve	For brewers with automatic hot water faucet	Faucet 	Have dispenser under faucet! Touch to activate flow
Brew Basket Lock	Operates brew basket locks, toggling them on and off		BBL lock Left Right   BBL Unlock Left Right   BBL Sensor Left Right  	Will toggle brew basket locks to be engaged then OFF.

Brewer Setup

NOTE-Assemble legs immediately after unpacking the brewer and before connection to utilities

1) Attach legs

4" flange foot legs -

Part number 1073.00007.00

3 required for CBS-2242

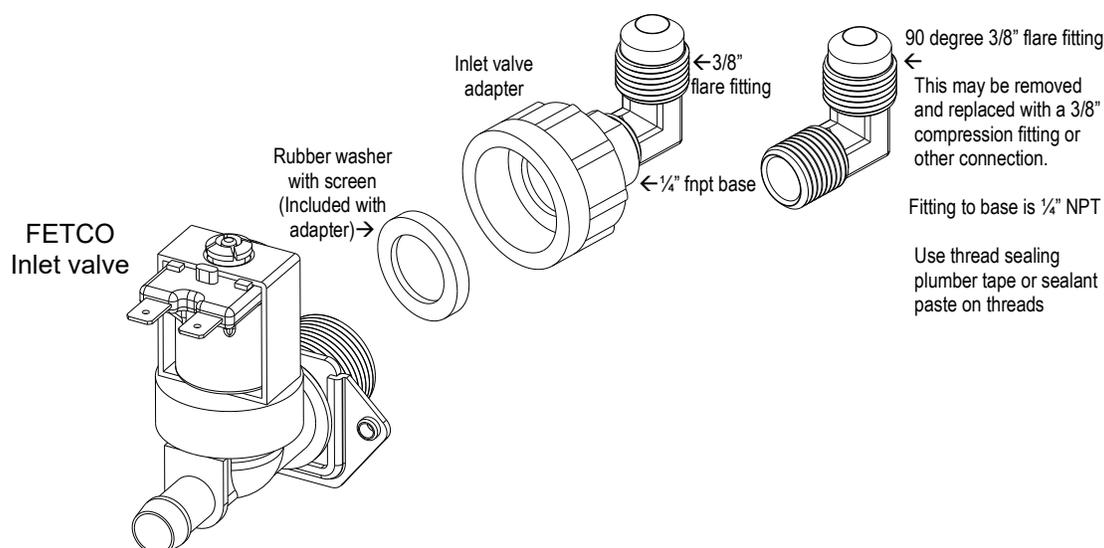

4 required for CBS-2241

Legs are sent from factory inside brew basket. Attach legs before installing

Brewer Setup

2) Attach water inlet adapter

Place rubber washer with screen in adapter. Hand tighten only-and 1/4 turn with wrench

Install the adapter on inlet valve first before attaching water line. Adapter is shipped in the brew basket
The valve threads are 3/4" BSP MALE THREAD and are not 3/4 garden hose fittings.
Use of any other connector to valve will damage the valve
DO NOT use US dishwasher water adapter or US washing machine adapter for this connection.
The threads on the USA adapters are unusable for the valve

TO PREVENT DAMAGE AND INSURE PROPER EQUIPMENT OPERATION

The inlet valve thread is 3/4 INCH BSP (British Standard Pipe).

This valve is not a standard USA washing machine or dishwasher thread (3/4" GHT)

-Use only the plumbing adaptor kit included with this equipment. Use the gasket included in adaptor kit

-Plumber's tape is not recommended for the adapter to valve connection

-Hand tighten adapter on valve with gasket, then very lightly wrench 1/4 turn to set

-DO NOT SUBSTITUTE FITTINGS FOR CONNECTING TO WATER SUPPLY

Damage to inlet valve from improper installation will void the warranty

NOTE: DO NOT TANK PLUMB DRAIN. DRAIN IS FOR SERVICE AND MAINTENANCE.

General:

1. If not installed correctly by qualified personnel, the brewer will not operate properly, and damage may result.
 2. Utilize only qualified beverage equipment service technicians for service and installation.
 3. Always have an empty dispenser under spray head of all coffee brewing equipment-including when at idle
 4. Damages resulting from improper installation are not covered by the warranty and will void the warranty.
- Below are the key points to consider before installation:

Electrical:

1. All CBS_Series brewers require **an electrical ground wire**. Installation without grounding is dangerous.
2. Note Equipotentiality Terminal, if present, (To identify the terminals which, when connected together, bring the various parts of equipment or of a system to the same potential, not necessarily being the earth (ground) potential, e.g. for local bonding.)
3. Verify voltages, polarity, circuits, and circuit breaker access before attaching equipment.
4. Brewers in this series wire differently in regard to a neutral wire. Review the wire diagrams.
5. The electrical diagram is located in the User's Guide and online at www.fetco.com.
6. Make sure of the tight grounding of the equipment and use the external ground bolt.
7. The installation must comply with applicable federal, state, and local codes having jurisdiction at your location. Check with your local inspectors to determine what codes will apply.

→See wiring diagrams on pages 29-31 for connections

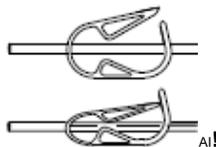

Plumbing:

1. North America: All installations must comply with applicable federal, state, or local plumbing codes.
2. All Others: The water and waste piping and connections shall comply with the International Plumbing Code, International Code Council (ICC), or to the Uniform Plumbing Code (IAPMO).
3. Install a backflow prevention device. Most municipalities require a recognized backflow preventer
Usable on all hot beverage and cold beverage equipment is a WATTS® SD-2 or SD-3.
WATTS spring loaded double check valve models are accepted by most zoning authorities.
→The check valve should be as close to the water supply inlet of the beverage equipment as possible
4. All beverage equipment must use a water filter. A finishing carbon filter is preferred
5. Install the filter unit after a water shutoff valve and in a position to facilitate filter replacement.
6. The water line and newly installed filter cartridge must be flushed thoroughly prior to connecting it to the brewer to prevent debris from contaminating the machine
7. Verify that the water line will provide a flow rate of at least 1½ gpm/(5.7lpm) per minute and the water pressure is between 20-75 psig (138-517kPa) before making any connections
8. **IMPORTANT:** Only use the supplied factory fitting to attach water supply line to brewer (shipped in brew basket)
9. The supplied fitting is a 3/8" flare/compression fitting for 1/4" supply line. Other adaptors may be substituted.
10. Hand tighten the factory fitting when connecting the stub on the brewer. This will reduce stress on the internal connections and reduce the possibility of leaks developing after the install has been completed

Tank Drain

The water tank must be drained before maintenance procedures, and when the unit is to be relocated or shipped. Drain is for service use only and must not be permanently connected. NOTE: Never plumb a water line to the drain.

1. Disconnect power and water to unit. DANGER: Ensure that all utility connections to the brewer are broken.
2. Move the unit near a sink or obtain a container large enough to hold four gallons of water.
→Note: The CBS-2241 hot water tank when full holds 3.3 gallons; the CBS-2242 6 gallons.
3. Remove the front panel and tank cover and allow the tank to cool to a safe temperature
4. The tank drain line and clamp are located inside-under the hot water tank. Pinch the drain line clamp to close
5. Locate the fill valve against the back wall, using pliers, loosen the hose clamp and move it back over the tube.
→Note Do not loosen the hose clamp to the bottom of the hot water tank
6. Crimp the tube an inch or two away from the drain plug to prevent water from flowing and pull it off the valve.
7. Pull the tube end out of the brewer and position over sink or bucket.
8. Release the crimped tube and hose clamp and allow the water to flow into the sink or container.
9. Reverse steps 4-8 when service is complete. Ensure pinch clamp is open and hose clamps are in place.

Brewer	Hot Water Tank Capacity	OPEN Leave open for use	
CBS-2241 Single	4.5 gallon 17 L	PINCH SHUT To drain tank & service brewer	
CBS-2242 Twin	8.5 gallon 32 L		

Operator Training

Review the operating procedures with whoever will be using the brewer.

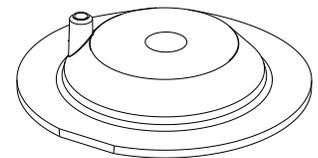

Pay particular attention to the following areas:

1. Always pre-heat the dispensers before the first use of each day by filling them half way with hot water, and letting them stand for at least 5 minutes.
2. Do not remove the brew basket from a coffee brewer until it has stopped dripping.
3. Make sure the dispenser is empty before brewing into it.
4. Show how to attach covers, close, and or secure the dispensers for transporting.
5. Show the location and operation of the water shut off valve as well as the circuit breaker for the brewer.
6. Steam from the tank will form condensation in the vent tubes. This condensation will drip into and then out of the brew baskets. Up to 1/4 cup/60 cc discharging overnight is possible. Place an appropriate container under each brew basket when not in use.
7. We recommend leaving the power to the brewer on overnight. The water tank is well insulated and very little electricity is used to keep the tank hot. Leaving the brewer in the "ON" position will also avoid delays at the beginning of shifts for the brewer to reach operating temperature.

Cleaning & Maintenance

After Each Brew:

1. Dispose of grounds and rinse brew basket.-
2. Never strike a brew basket or hit it against a hard surface.
This will damage the brew cone, and may damage the brew basket support rails
3. Rinse dispensers before reuse.

Every Day:

1. Wash brew basket with hot sudsy water.
2. Pull CSD from the spray head, it is magnetically attached. Use gloves or a heavy towel. → Wash off any film and reattach. Use vinegar if limescale filming is present.
3. Clean dispensers with hot suds water and a brush, rinse and air dry.
4. Use only a soft cloth and hot suds on the outside to avoid scratches. Never use abrasives that will scratch surface.

Weekly

1. Use a commercial coffee dispenser cleaner such as URNEX™, TABZ™, DIP-IT™ or Squeak 'n Clean™.
2. Carefully Follow the instructions supplied with the cleaning product
3. Never use spray cleaners, solvent, solvent based cleaner or petroleum based polish anywhere on dispensers

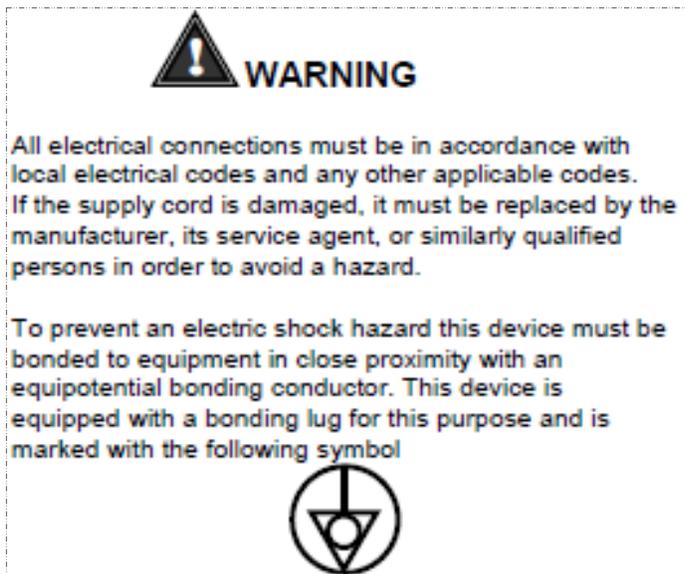

Warning

1. Turn off power before any cleaning procedure, including wiping the exterior for appearance reasons.
2. Dry the exterior, especially the face panel, before turning on power.
3. Do not apply any type of spray cleaner on the face panel of this equipment.
4. Never use solvent or solvent-based cleaner or petroleum based polish anywhere on this equipment.
5. Dry the face of the touch pad before turning on power
6. Do not electrically energize this equipment or attempt operation without all covers in place and all screws fastened.
7. Unplug machine before disassembly or servicing.

Installation safety and hygiene directions-For International and CE equipment

1. Access to the service area is restricted to persons having safety/hygiene knowledge and practical experience of the coffee brewer. This appliance must be installed in locations where it can be overseen by trained personnel.
2. For proper operation, this appliance must be installed indoors where the temperature is between 10°C/50°F to 35°C/95°F. Drain and remove all liquid from equipment and lines if exposed to freezing temperatures.
3. All commercial cooking equipment, including this unit, is not intended for use by children or persons with reduced physical, sensory, or mental capabilities. Ensure proper supervision of children and keep them away from the unit.
4. Children should be supervised to ensure that they do not play hot beverage equipment.
5. This unit must be installed and serviced by qualified personnel only.
6. Installation must conform to all local electrical and plumbing codes. Installation by unqualified personnel will void the unit warranty and may lead to electric shock or burn, as well as damage to unit and/or its surroundings.
7. If the power cord requires repair or replacement-it must be performed by the manufacturer or authorized service personnel with the specified cord only from the manufacturer in order to avoid a hazard.
8. Review the dimensions for the unit and verify that it will fit properly in the space intended for it. Verify that the counter or table will support the total weight of the brewer and dispensers when filled (See: Technical Data).
9. Place the brewer on the counter or stand. When the brewer is in position, level it front to back as well as side-to-side by adjusting the legs.
10. Brewers will need a sturdy supported surface for operation. Do not move brewers when filled.
11. Do not tilt appliance more than 10° to insure safe operation.
12. Unit is for protected indoor use only. Do not steam clean or use excessive water on unit.
13. This unit is not "jet-proof" construction. Do not pressure wash or use jet spray to clean this unit.
14. The unit is not waterproof-do not submerge or saturate with water.

**Equipment exposed to flood and contaminated must not be used due to electrical and food safety.
Do not operate if unit has been submerged or saturated with water.**

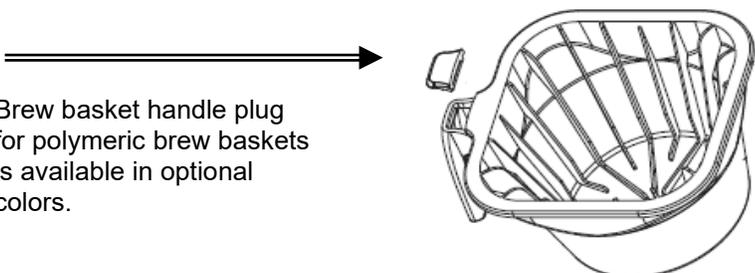

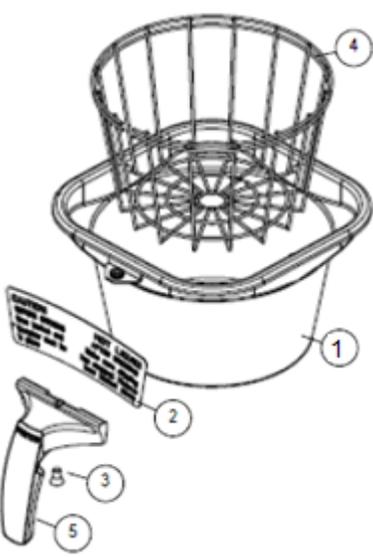

Labels and warnings for hot beverage equipment

	WARNING To reduce risk of electric shock or fire.
	FETCO® Hot Beverage Equipment is for commercial use only.
	Do not remove or open cover. No user serviceable parts inside. Refer installation and service to qualified personnel.
	Caution, disconnect from power supply before servicing.
	GROUND: National Electrical Code requires separate grounding wire.
	Use dedicated circuit with capacity rated by local code or National Electrical Code for the current draw of this equipment. Check serial number plate on right side for power requirements.
	Locate unit away from source of heat. Do not install or use near combustibles.
	THIS APPLIANCE IS ENERGIZED WHENEVER IT IS CONNECTED TO A POWER SOURCE
	FAILURE TO COMPLY RISKS EQUIPMENT DAMAGE, PROPERTY DAMAGE, FIRE, OR SHOCK HAZARD
	This equipment must be installed with a backflow protection device to comply with federal, state or local municipality codes.
	Read the user guide before installing and operating this unit.

12	1	1023.00344.00	PLUG INSERT, QUICK CONNECT

Ref	Qty	Part Number	Description
		1102.00449.00	Electrical component lattice, CBS-2200 Part#1102.00449.00 COMPLETE ELECTRICAL COMPONENT LATTICE, CBS-2200
1	1	1023.00350.00	ELECTRICAL MOUNTING LATTICE, COMMON
2	1	1052.00023.00	EUROSTRIP HE16 TERM. BLOCK, 4 POLE, 63 AMP, 18-8 AWG
3	2	1082.00056.00	SCREW, #8-11 X 1" PAN HD PHIL, THREAD FORMING
4	1	1058.00024.00	SWITCH, POWER, DOUBLE POLE, 16A, 125/250 VAC
5	1	1057.00043.00	SOLENOID VALVE, 5.5L/min, 180 DEG, 24VDC
6	2	1082.00010.00	SCREW, PAN HD. PHIL. MACH., M4x10 ZINC-PLATED
7	1	1052.00059.00	POWER SUPPLY, 90-264VAC/24VDC, 2.25A
8	2	1082.00020.00	SCREW, #6 X 5/8, TRUSS HD PHIL, SHEET MTL
9	1	1058.00055.00	USB CONNECTOR
10	1	1058.00162.00	ETHERNET PLUG IN CONNECTOR, W/COVER
