

There's a new buzz in the garden!

Bees are friends of the environment.

They help all kinds of plants **GrOW**,
from wildflowers, macadamias and apples
to your parent's coffee.

Bees help us in so many ways, so let's say **thank you** by planting seeds that will grow into flowers, herbs and vegies that bees will love.

The adventure begins

with one tiny pot,

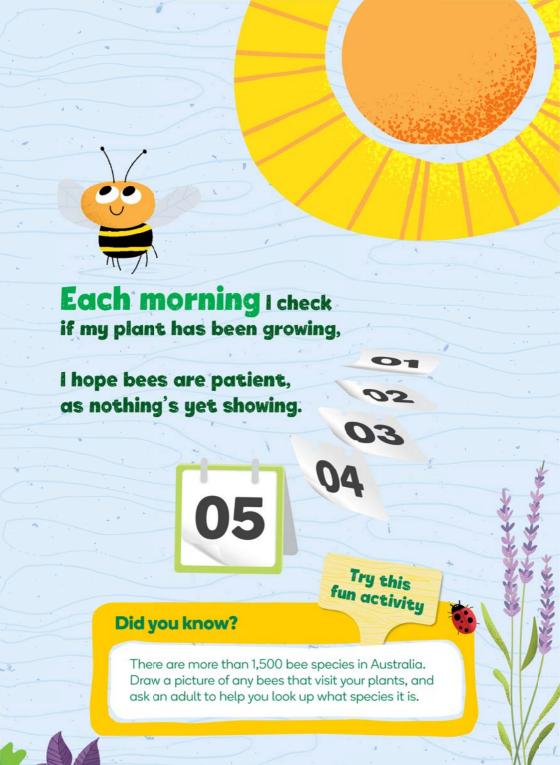

But the **treasure** inside can turn into a lot!

Just a few minutes' work, and the fun has begun.

The **Magic** starts happening deep down below,

Some seeds can grow *fast* but others are

Growing roots

What's happening under the surface? Although you can't see it, your seed is sending roots down into the soil to search for water and nutrients. Find the quickest path from the ladybug at the top to reach the bottom of the pot.

Outdoor adventure

Time to discover

Can you spot all of these things? Head outside with an adult and go for a walk. Cross off each item above when you spot it on your adventure. Then one special morning, what an awesome **SUPPRISE**,

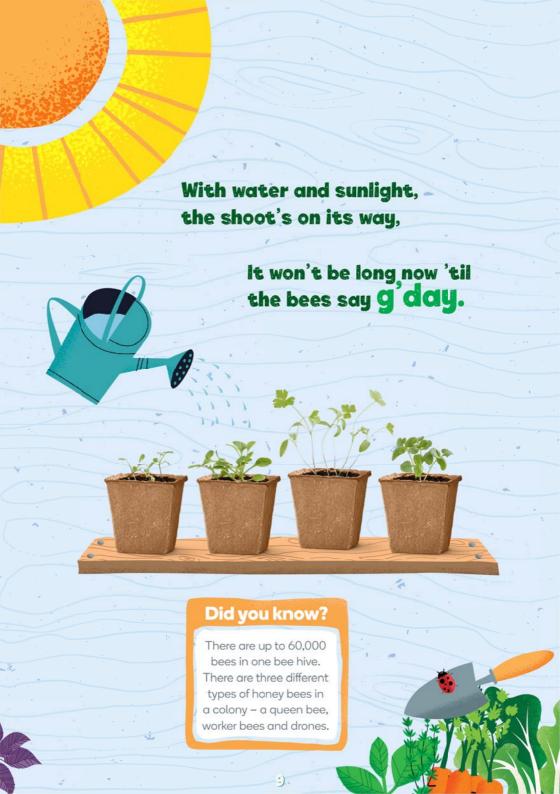

I can't quite **believe** what I see with my eyes.

While I have been dreaming all night in my bed,

A tiny green shoot has poked out its head.

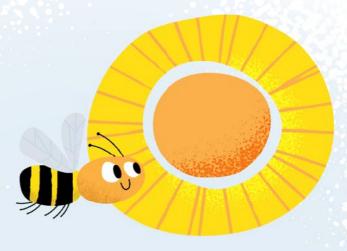

The seedlings reach upwards and it's time to repot,

I choose their new home in a Warm, sunny spot.

I'm so proud of my plants, as their flowers open wide,

Bees just love all the nectar and pollen inside.

Try this fun activitu

Once your baby plant is taller than the Woolworths Discovery Garden pot, it's time to move it to a bigger home with the help of an adult. It could be a bigger pot, an empty spot in the garden or even a brightly coloured gumboot. You will need:

- Gardening gloves
- Potting mix
- A spade

Step 1: Dig a hole in your garden or fill the perfect pot with soil. Leave enough space for your thriving seedling – keep it in its little compostable pot, which will eventually break down in the soil.

Step 2: Place your seedling into the hole and tuck it in tightly with potting mix.

Step 3: Give it a good drink of water - repotting is thirsty work!

For more tips and ideas, visit woolworths.com.au/repotting with a responsible adult.

My vegies and herbs are the tastiest treat.

What a cool thing to do,

growing food

we

Give the bees a drink with the help of an adult

Bees get thirsty, just like us, so make sure they have access to water in your garden.

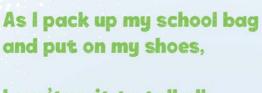

Step 1: Place a shallow bowl or container near your seedlings.

Step 2: Add a handful of shells, pebbles or both. Bees can easily drown in water, so these will give them something to perch on safely while they drink.

Step 3: Add clean, fresh water, making sure not to cover the landing pad. We want to keep those bees safe!

Step 4: Top up each morning to ensure it doesn't dry out.

I can't wait to tell all my buddies the news.

Show your friends

My garden report

It's time to share the fruits of your labour. Write down the highlights from your journey to share with your classmates, and don't forget to keep an eye out for buzzy visitors.

My favourite thing that I grew was:

What does it look like: Tall? Colourful?...

What does it smell like?

Did the bees enjoy visiting this plant?

If not, which one did they prefer?

I think the bees liked this plant because:

Extra: On a spare piece of paper, draw your plant to go with your report.

Hooray for more garden adventures to come!
