Executive Summary

This report presents the results of the Traffic Impact Analysis (TIA) conducted for the proposed RV Park located at 280 Capistrano Road in the Princeton Harbor area of San Mateo County, California. The project proposes to construct a 50-space RV park with 7 tent spaces and a supporting 832 square-foot laundry and restroom facility. The proposed RV park site is located on the northwest corner of the Cabrillo Highway (State Route 1) and Capistrano Road intersection, just north of Pillar Point Harbor. The project site is currently vacant. Access to the project site would be provided via a driveway operating as the north leg of the Pillar Point Harbor Boulevard/Capistrano Road intersection. The driveway access would be shared with the existing Shoppes at Harbor Village.

This study was conducted for the purpose of identifying the potential transportation impacts related to the proposed development. The potential impacts of the project were evaluated in accordance with the standards set forth by the County of San Mateo and the City/County Association of Governments (C/CAG) of San Mateo County CMP. The study included the analysis of traffic conditions at one signalized intersection and one unsignalized intersection during the weekday AM, PM, and Saturday midday peak hours. The analysis focuses on the weekday peak commute periods between 7:00 AM and 9:00 AM and 4:00 PM and 6:00 PM, and the Saturday midday peak hour is typically between 11:00 AM and 3:00 PM. It is during these hours that traffic conditions on the surrounding roadways are generally the most congested and the impact on the roadway system by traffic from the proposed RV park would be greatest.

Project Trip Generation

Trip generation for the proposed RV park was estimated by applying to the size and use of the development the appropriate trip generation rates obtained from the ITE *Trip Generation Manual, 9th Edition* (2012). The trip generation rates for Campground/Recreational Vehicle Park (ITE Land Use 416) were applied to the project. In consultation with County staff, the upper-range trip rate during each peak hour was used to present a conservative estimate. Given that the ITE trip generation rates do not include Saturday peak hours, the Saturday midday peak hour was derived from trip generation surveys Hexagon Transportation Consultants, Inc. conducted in March 2017 at comparable RV parks within the Bay Area. The magnitude of traffic generated by the proposed RV park was estimated by multiplying the ITE and the observed RV parks' trip generation rates by the proposed development.

Based on a size of 50 spaces, the proposed development would generate a total of 18 trips (5 incoming and 13 outgoing) during the AM peak hour, 22 trips (14 incoming and 8 outgoing) during the PM peak hour, and 26 trips (12 incoming and 14 outgoing) during the Saturday midday peak hour.

Project Impacts

The results of the intersection level of service analysis are shown in Table ES-1. The analysis determined that under all scenarios with and without the project, the signalized study intersection, Cabrillo Highway (SR 1)/Capistrano Road, would operate at an acceptable level of service (LOS C or better, with each individual movement operating at LOS D or better) during the AM, PM, and Saturday midday peak hours. In addition, the analysis results show that the two-way stop-controlled study intersection would operate at LOS C or better during all peak hours. The analysis indicates that vehicles on the stop-controlled approaches (the Pillar Point Harbor Boulevard and the Shoppes at Harbor Village private driveway) would experience moderate delays.

Other Transportation Issues

Based on a review of the project site plan, there would be no issues regarding site access along Capistrano Road; and no issues are expected to arise regarding on-site circulation. The driveway design of the proposed shared-access driveway would provide adequate clearance for large vehicles to perform turn movements. Furthermore, the proposed project would not have an adverse effect on the existing transit, pedestrian, or bicycle facilities in the study area. Thus, no project sponsored improvements would be necessary.

Table ES-1
Intersection Level of Service Summary

Study Number	Intersection	Peak Hour	Count Date	Control Type	Existing		Background		Cumulative	
					No Project	with Project	No Project	with Project	No Project	with Project
1	Capistrano Road and Cabrillo Highway (SR 1)	AM	3/2/17		17.9	B	17.9	B	19.6	B
		PM	3/2/17	Signal	15.9	B	16.0	B	16.9	B
		Sat Midday	3/4/17		16.2	B	16.4	B	18.6	B
2	Capistrano Road and Pillar Point Harbor Boulevard	AM	5/4/17		12.7	B	13.0	B	14.1	B
		PM	5/4/17	TWSC ¹	17.5	C	17.9	C	20.3	C

1. Introduction

This report presents the results of the Traffic Impact Analysis (TIA) conducted for the proposed RV Park located at 280 Capistrano Road in the Princeton Harbor area of San Mateo County, California. The project proposes to construct a 50-space RV park with 7 tent spaces and a supporting 832 square-foot laundry and restroom facility. The proposed RV park site is located on the northwest corner of the Cabrillo Highway (State Route 1) and Capistrano Road intersection, just north of Pillar Point Harbor (see Figure 1). The project site is currently vacant. Access to the project site would be provided via a driveway operating as the north leg of the Pillar Point Harbor Boulevard/Capistrano Road intersection (see Figure 2). The driveway access would be shared with the existing Shoppes at Harbor Village.

Scope of Study

This study was conducted for the purpose of identifying the potential transportation impacts related to the proposed development. The potential impacts of the project were evaluated in accordance with the standards set forth by the County of San Mateo and the City/County Association of Governments (C/CAG) of San Mateo County CMP. A County Congestion Management Program (CMP) analysis was not required because the project would add fewer than 100 peak hour trips to any CMP roadways (SR 1) designated by the C/CAG. The traffic study includes an analysis of AM, PM, and Saturday midday peak hour traffic conditions for one signalized intersection and one unsignalized intersection in the vicinity of the project site. The study also includes an analysis of the project driveway design, and transit, bicycle, and pedestrian access.

Study Intersections

1. Cabrillo Highway (State Route 1) and Capistrano Road
2. Pillar Point Harbor Boulevard and Capistrano Road (unsignalized)

Analysis Time Periods

Traffic conditions at the study intersections were analyzed for the weekday AM, PM, and Saturday midday peak hours of adjacent street traffic. The AM and PM peak hours are expected to occur between 7:00 AM and 9:00 AM and 4:00 PM and 6:00 PM, respectively, on a regular weekday, and the Saturday midday peak hour is expected to occur between 11:00 AM and 3:00 PM. It is during these peak travel periods that traffic is busiest, and the impact on the roadway system by traffic from the proposed RV park would be greatest.

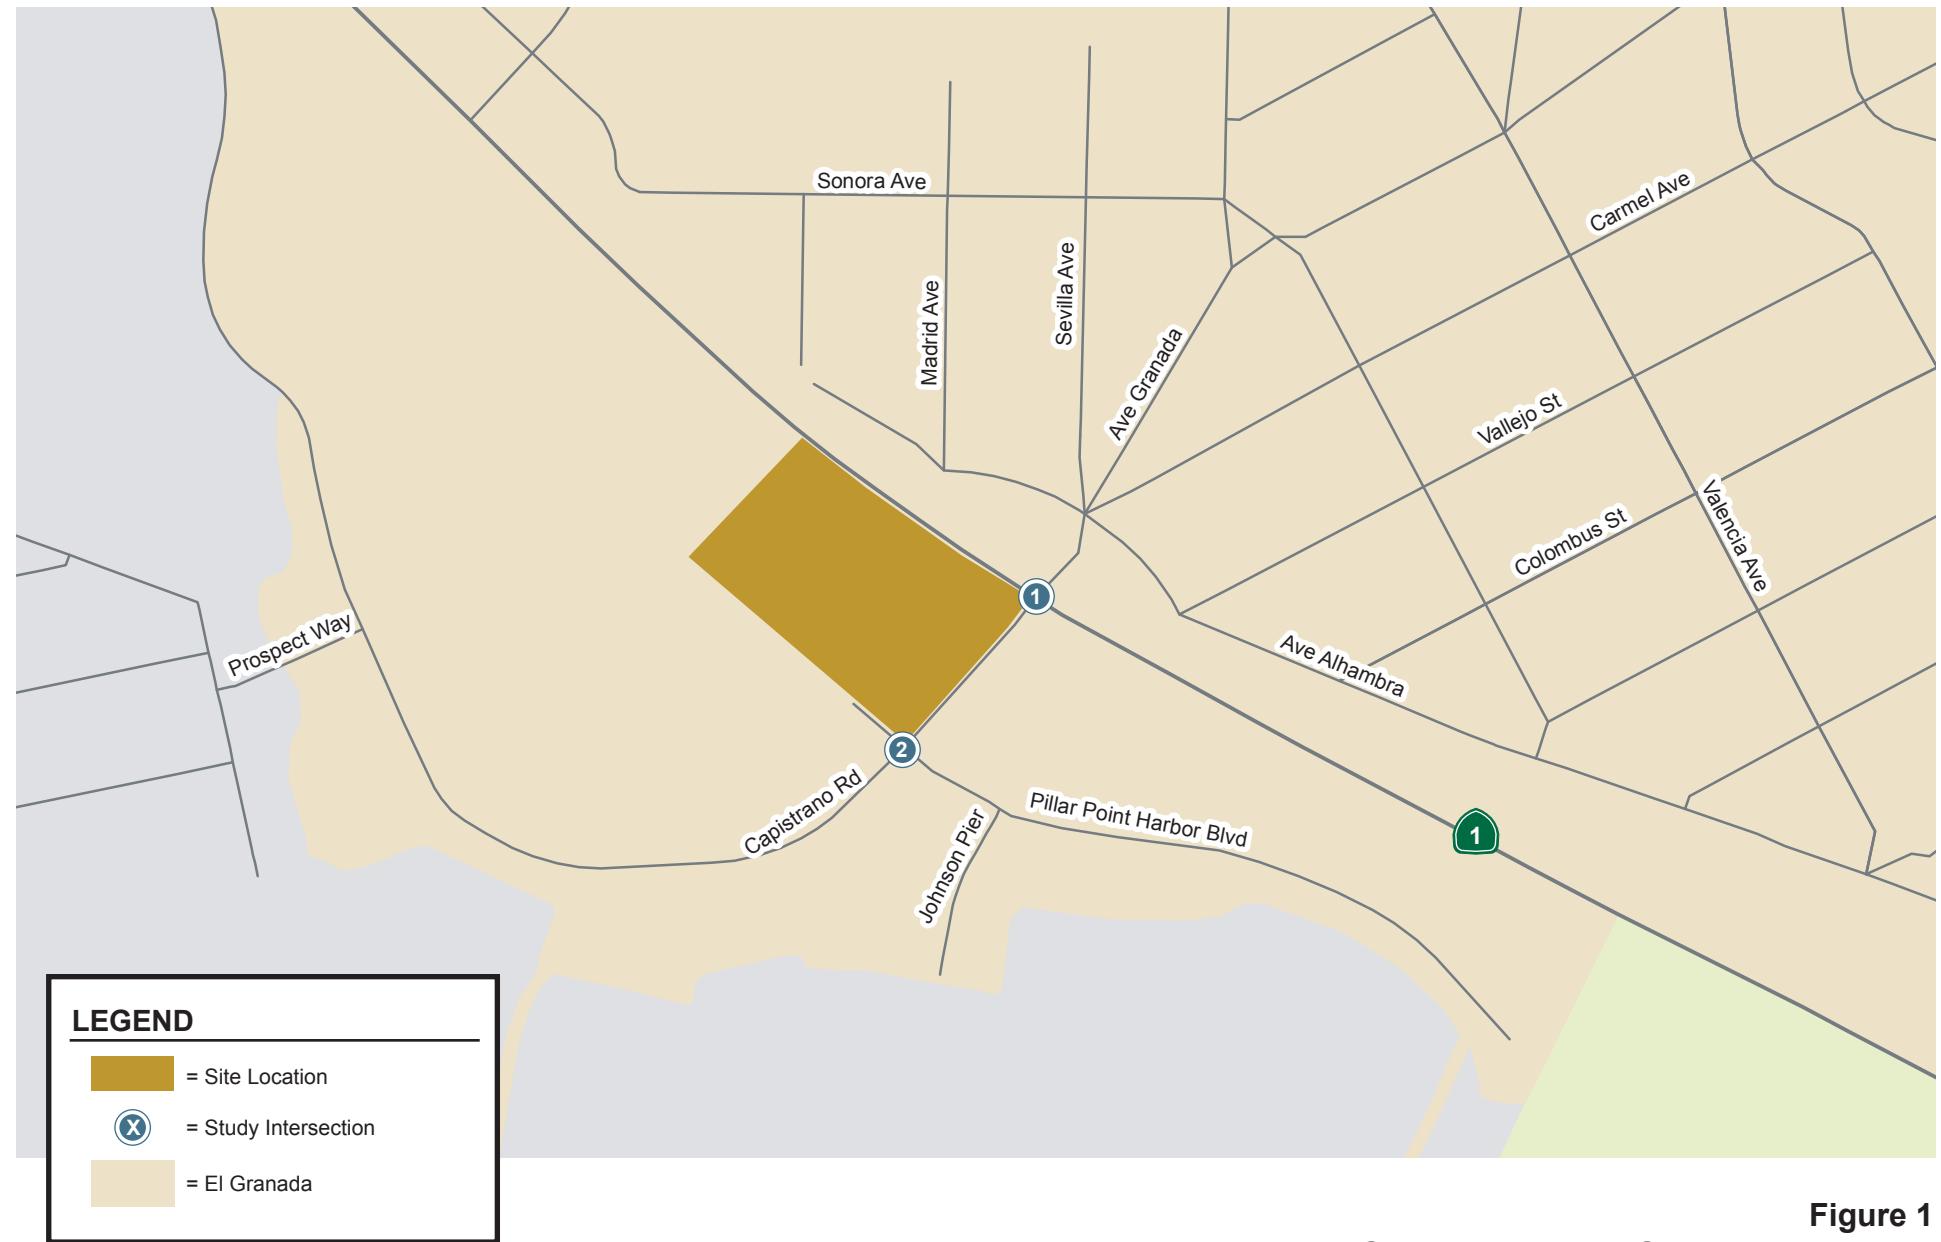

Figure 1
Site Location and Study Intersections

Princeton Harbor RV Park

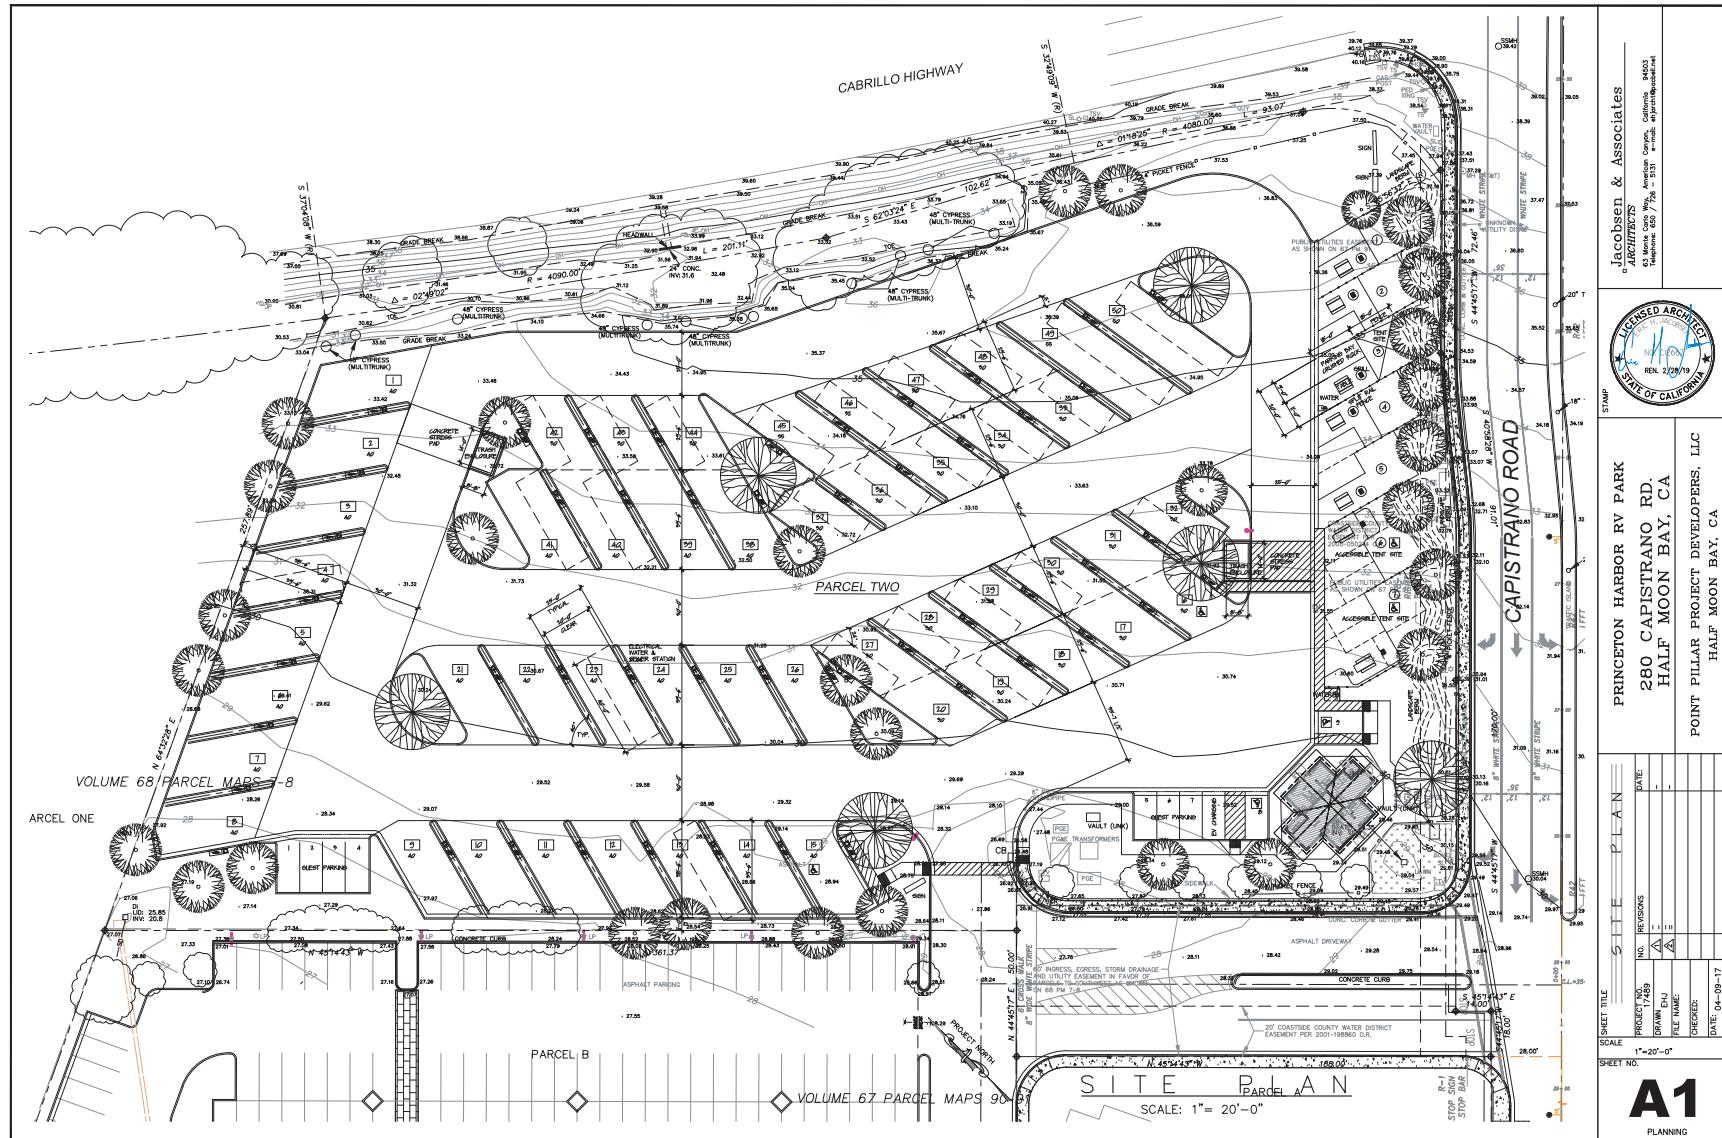

Figure 2 Project Site Plan

Traffic conditions were evaluated for the following scenarios:

Scenario 1: *Existing Conditions.* Existing traffic volumes at study intersections were based on traffic counts conducted in March and May of 2017. The study intersections were evaluated with a level of service analysis using Synchro software in accordance with the *2010 Highway Capacity Manual* methodology.

Scenario 2: *Background Conditions.* Background traffic volumes reflect traffic added by projected volumes from approved but not yet completed developments in the project area. The approved project trips and/or approved project information was provided by the County of San Mateo. The County of San Mateo approved project information is included in Appendix B.

Scenario 3: *Existing plus Project Conditions.* Existing traffic volumes with the project were estimated by adding to existing traffic volumes the additional traffic generated by the project. Existing plus project conditions were evaluated relative to existing conditions in order to determine the effects the project would have on the existing roadway network.

Scenario 4: *Background plus Project Conditions.* Background traffic volumes with the project were estimated by adding to background traffic volumes the additional traffic generated by the project. Background plus project conditions were evaluated relative to background conditions in order to determine potential project impacts.

Scenario 5: *Cumulative Conditions.* Cumulative traffic volumes represent traffic growth through the year 2022 (five years of growth). Cumulative traffic volumes were estimated by applying a 1% annual growth rate to the existing traffic counts and adding the traffic from approved developments. Cumulative plus project conditions were estimated by adding to the cumulative traffic volumes the additional traffic estimated to be generated by the proposed project. Cumulative plus project conditions were evaluated relative to cumulative conditions to determine potential project impacts.

Methodology

This section presents the methods used to determine the traffic conditions for each scenario described above. It includes descriptions of the data requirements, the analysis methodologies, and the applicable level of service standards.

Data Requirements

The data required for the analysis were obtained from new traffic counts, the County of San Mateo, and field observations. The following data were collected from these sources:

- existing peak-hour intersection turning-movement volumes
- lane configurations
- intersection signal timing and phasing
- list of approved but not yet completed projects

Level of Service Standards and Analysis Methodologies

Traffic conditions at the study intersections were evaluated using level of service (LOS). *Level of Service* is a qualitative description of operating conditions ranging from LOS A, or free-flow conditions

with little or no delay, to LOS F, or jammed conditions with excessive delays. The various analysis methods are described below.

County of San Mateo Signalized Intersections

The County of San Mateo level of service standards were used to evaluate the signalized study intersections. The County of San Mateo evaluates intersection level of service based on the *Highway Capacity Manual* (HCM) 2010 method using the Synchro software. The 2010 HCM method evaluates signalized intersection operations on the basis of average control delay time for all vehicles at the intersection. This average delay can then be correlated to a level of service. The County of San Mateo level of service standard for signalized intersections is LOS C or better, with each individual movement operating at LOS D or better. The correlation between delay and level of service is shown in Table 1.

Table 1
Signalized Intersection Level of Service Definitions Based on Control Delay

Level of Service	Description	Average Control Delay Per Vehicle (sec.)
A	Signal progression is extremely favorable. Most vehicles arrive during the green phase and do not stop at all. Short cycle lengths may also contribute to the very low vehicle delay.	10.0 or less
B	Operations characterized by good signal progression and/or short cycle lengths. More vehicles stop than with LOS A, causing higher levels of average vehicle delay.	10.1 to 20.0
C	Higher delays may result from fair signal progression and/or longer cycle lengths. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant, though some vehicles may still pass through the intersection without stopping.	20.1 to 35.0
D	The influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable signal progression, long cycle lengths, or high volume-to-capacity (V/C) ratios. Many vehicles stop and individual cycle failures are noticeable.	35.1 to 55.0
E	This is considered to be the limit of acceptable delay. These high delay values generally indicate poor signal progression, long cycle lengths, and high volume-to-capacity (V/C) ratios. Individual cycle failures occur frequently.	55.1 to 80.0
F	This level of delay is considered unacceptable by most drivers. This condition often occurs with oversaturation, that is, when arrival flow rates exceed the capacity of the intersection. Poor progression and long cycle lengths may also be major contributing causes of such delay levels.	greater than 80.0

Source: Transportation Research Board, 2000 *Highway Capacity Manual* (Washington, D.C., 2000), p.10-16.

Unsignalized Intersections

Level of service at unsignalized intersections was based on the 2010 *Highway Capacity Manual* (2010 HCM) method using the Synchro software. This method is applicable for both two-way and all-way stop-controlled intersections. The one unsignalized study intersection operates with two-way stop control. For two-way stop-controlled intersections, the reported levels of service are based on the worst approach delay at the intersection. The County of San Mateo does not have a level of service standard for unsignalized intersections. Therefore, intersection levels of service for unsignalized intersections are reported for informational purposes only. The correlation between average control delay and LOS for unsignalized intersections is shown in Table 2.

Table 2
Unsignalized Intersection Level of Service Definitions Based on Control Delay

Level of Service	Description	Average Control Delay Per Vehicle (sec.)
A	Little or no traffic delay	10.0 or less
B	Short traffic delays	10.1 to 15.0
C	Average traffic delays	15.1 to 25.0
D	Long traffic delays	25.1 to 35.0
E	Very long traffic delays	35.1 to 50.0
F	Extreme traffic delays	greater than 50.0

(Washington, D.C., 2000) p17.2

CMP Roadway System

Per CMP technical guidelines, a roadway system level of service analysis is required when a project is expected to add trips greater than one percent of a segment's capacity. Given that new SR 1 trips generated by the project are expected to be considerably less than the one percent threshold of roadway capacity to all segments in the area. Therefore, a detailed analysis of roadway system levels of service was not performed. A simple roadway segment capacity evaluation to substantiate this determination is presented in Table 3.

Table 3
Roadway Segment Capacity Evaluation

Roadway Segment	Dir	Peak Hour	Existing Conditions ¹			Project Conditions		
			# of Lanes	Capacity	LOS	Project Trips ²	% Capacity Impact	
SR 1	NB	AM	2	4,400	E	8	0.18%	NO
		PM	2	4,400	E	12	0.27%	NO
SR 1	SB	AM	2	4,400	E	9	0.20%	NO
		PM	2	4,400	E	14	0.32%	NO

Notes:

¹ Existing freeway conditions referenced the Level of Service and Performance Measure Monitoring Report - 2015.

² Project trips are estimated via manual trip assignment.

BOLD indicates a substandard level of service.

Intersection Operations

The analysis of intersection level of service was supplemented with an analysis of traffic operations for intersections where the project would add a significant number of left turns. The operations analysis is based on vehicle queuing for high demand left-turn movements at intersections. Vehicle queues were estimated using a Poisson probability distribution, which estimates the probability of "n" vehicles for a vehicle movement using the following formula:

$$P(x=n) = \frac{\lambda^n e^{-(\lambda)}}{n!}$$

Where:

P (x=n) = probability of "n" vehicles in queue per lane

n = number of vehicles in the queue per lane

λ = average # of vehicles in the queue per lane (vehicles per hr per lane/signal cycles per hr)

The basis of the analysis is as follows: (1) the Poisson probability distribution is used to estimate the 95th percentile maximum number of queued vehicles per signal cycle for a particular movement; (2) the estimated maximum number of vehicles in the queue is translated into a queue length, assuming 25 feet per vehicle; and (3) the estimated maximum queue length is compared to the existing or planned available storage capacity for the movement. This analysis thus provides a basis for estimating future turn pocket storage requirements at signalized intersections.

The 95th percentile queue length value indicates that during the peak hour, a queue of this length or less would occur on 95 percent of the signal cycles. Or, a queue length larger than the 95th percentile queue would only occur on 5 percent of the signal cycles (about 3 cycles during the peak hour for a signal with a 60-second cycle length). Therefore, left-turn storage pocket designs based on the 95th percentile queue length would ensure that storage space would be exceeded only 5 percent of the time. The 95th percentile queue length is also known as the "design queue length."

Report Organization

The remainder of this report is divided into six chapters. Chapter 2 describes the existing roadway network, transit services, and pedestrian facilities. Chapter 3 presents the intersection operations under the background scenario conditions, including the approved projects in the County of San Mateo. Chapter 4 describes the methods used to estimate project traffic and its impact on the transportation system. Chapter 5 describes cumulative traffic conditions. Chapter 6 presents the analysis of other transportation issues including site access and circulation, transit services, bicycle and pedestrian facilities, and vehicle queuing. Chapter 7 includes a summary of project impacts, any proposed mitigation measures, and recommended improvements.

2. Existing Conditions

This chapter describes the existing conditions for transportation facilities in the vicinity of the site, including the roadway network, transit service, pedestrian and bicycle facilities.

Existing Roadway Network

Regional access to the project site is provided via Cabrillo Highway (SR 1). Local access to the site is provided on Capistrano Road. These roadways are described below.

Cabrillo Highway (SR 1) is a two-lane, north-south highway in the vicinity of the site. Cabrillo Highway extends along the Pacific coastline, northward through San Francisco and southward through the San Mateo and Santa Cruz Counties. Access to and from the project study area is provided via Capistrano Road.

Capistrano Road is a local roadway that extends in an east-west direction. In the vicinity of the project site, Capistrano Road is a two-lane roadway and runs along the southern boundary of the project site. Capistrano Road provides direct access to the proposed Princeton Harbor RV Park site via the existing Shoppes at Harbor Village driveway at the Pillar Point Harbor Boulevard intersection.

Existing Pedestrian and Bicycle Facilities, and Transit Services

Pedestrian facilities consist of sidewalks, crosswalks, and pedestrian signals at signalized intersections. In the project vicinity, sidewalks exist along both sides of Capistrano Road and along the west side of Pillar Point Harbor Boulevard, providing pedestrian access to and from the project site. Marked crosswalks with pedestrian signal heads and push buttons are provided on three legs of the signalized study intersection of Cabrillo Highway and Capistrano Road. The north leg of the intersection does not have a crosswalk. At the unsignalized study intersection of Pillar Point Harbor Boulevard and Capistrano Road, crosswalks are provided on two legs of the intersection. Although some crosswalk connections are missing on Capistrano Road and Cabrillo Highway, the overall network of sidewalks and crosswalks in the study area has good connectivity and provides pedestrians with safe routes to transit services and other points of interest in the vicinity of the project site.

The existing bicycle facilities within the study area comprise the Coastal Trail along the Cabrillo Highway corridor. The Coastal Trail is part of a larger network of public trails along the entire California coastline, extending northward through San Francisco and southward through San Mateo and Santa Cruz Counties. The trail consists of Class I Bike Paths, Class II Bike Lanes, Class III Bike Routes, and unpaved gravel trails. In the vicinity of the project, the Coastal Trail consists of a Class I multi-use path south of the project site and accessible via Pillar Point Harbor Boulevard, which is designated as a

Class III bike route (see Figure 3). According to the *2011 San Mateo County Comprehensive Bicycle and Pedestrian Plan*, the County of San Mateo plans to provide the Parallel Trail (consisting of Class I Bike Paths and Class II Bike Lanes), which would run on the east side of the SR 1 from Montara to Half Moon Bay. This trail would provide enhanced bicycle connections to the project site.

Existing Transit Services

Existing transit services near the project site are provided by the San Mateo County Transit District (SamTrans) (See Figure 3). The study area is served directly by two local bus routes. Bus lines that run through the study area are listed in Table 4, including their route description and commute hour headways.

Local Route 17 operates on Cabrillo Highway in the vicinity of the project. The closest bus stop is within walking distance, located on the southern boundary of the project site. Route 17 operates between the Linda Mar Park & Ride lot and the Stage Road/Pescadero Creek Road intersection. Weekday service is from approximately 6:00 AM to 9:10 PM with 60-minute headways during commute hours.

Local Route 18 operates on Cabrillo Highway in the vicinity of the project. The closest bus stop is within walking distance, located on the southern boundary of the project site. Route 18 operates between the Moonridge Apartments southeast of Half Moon Bay and the Main Street/7th Street intersection in Montara. Service is provided only on school days with three runs in the morning and two runs in the afternoon.

Existing Intersection Lane Configurations

The existing lane configurations at the study intersections were determined by observations in the field and are shown on Figure 4.

Existing Traffic Volumes

Existing traffic volumes were obtained from new peak-hour turning movement counts collected in March and May of 2017. The existing peak-hour intersection volumes are shown in Figure 5. Intersection turning-movement counts conducted for this analysis are presented in Appendix A.

Figure 3
Existing Bicycle Facilities and Transit Services

Figure 4
Existing Lane Configurations

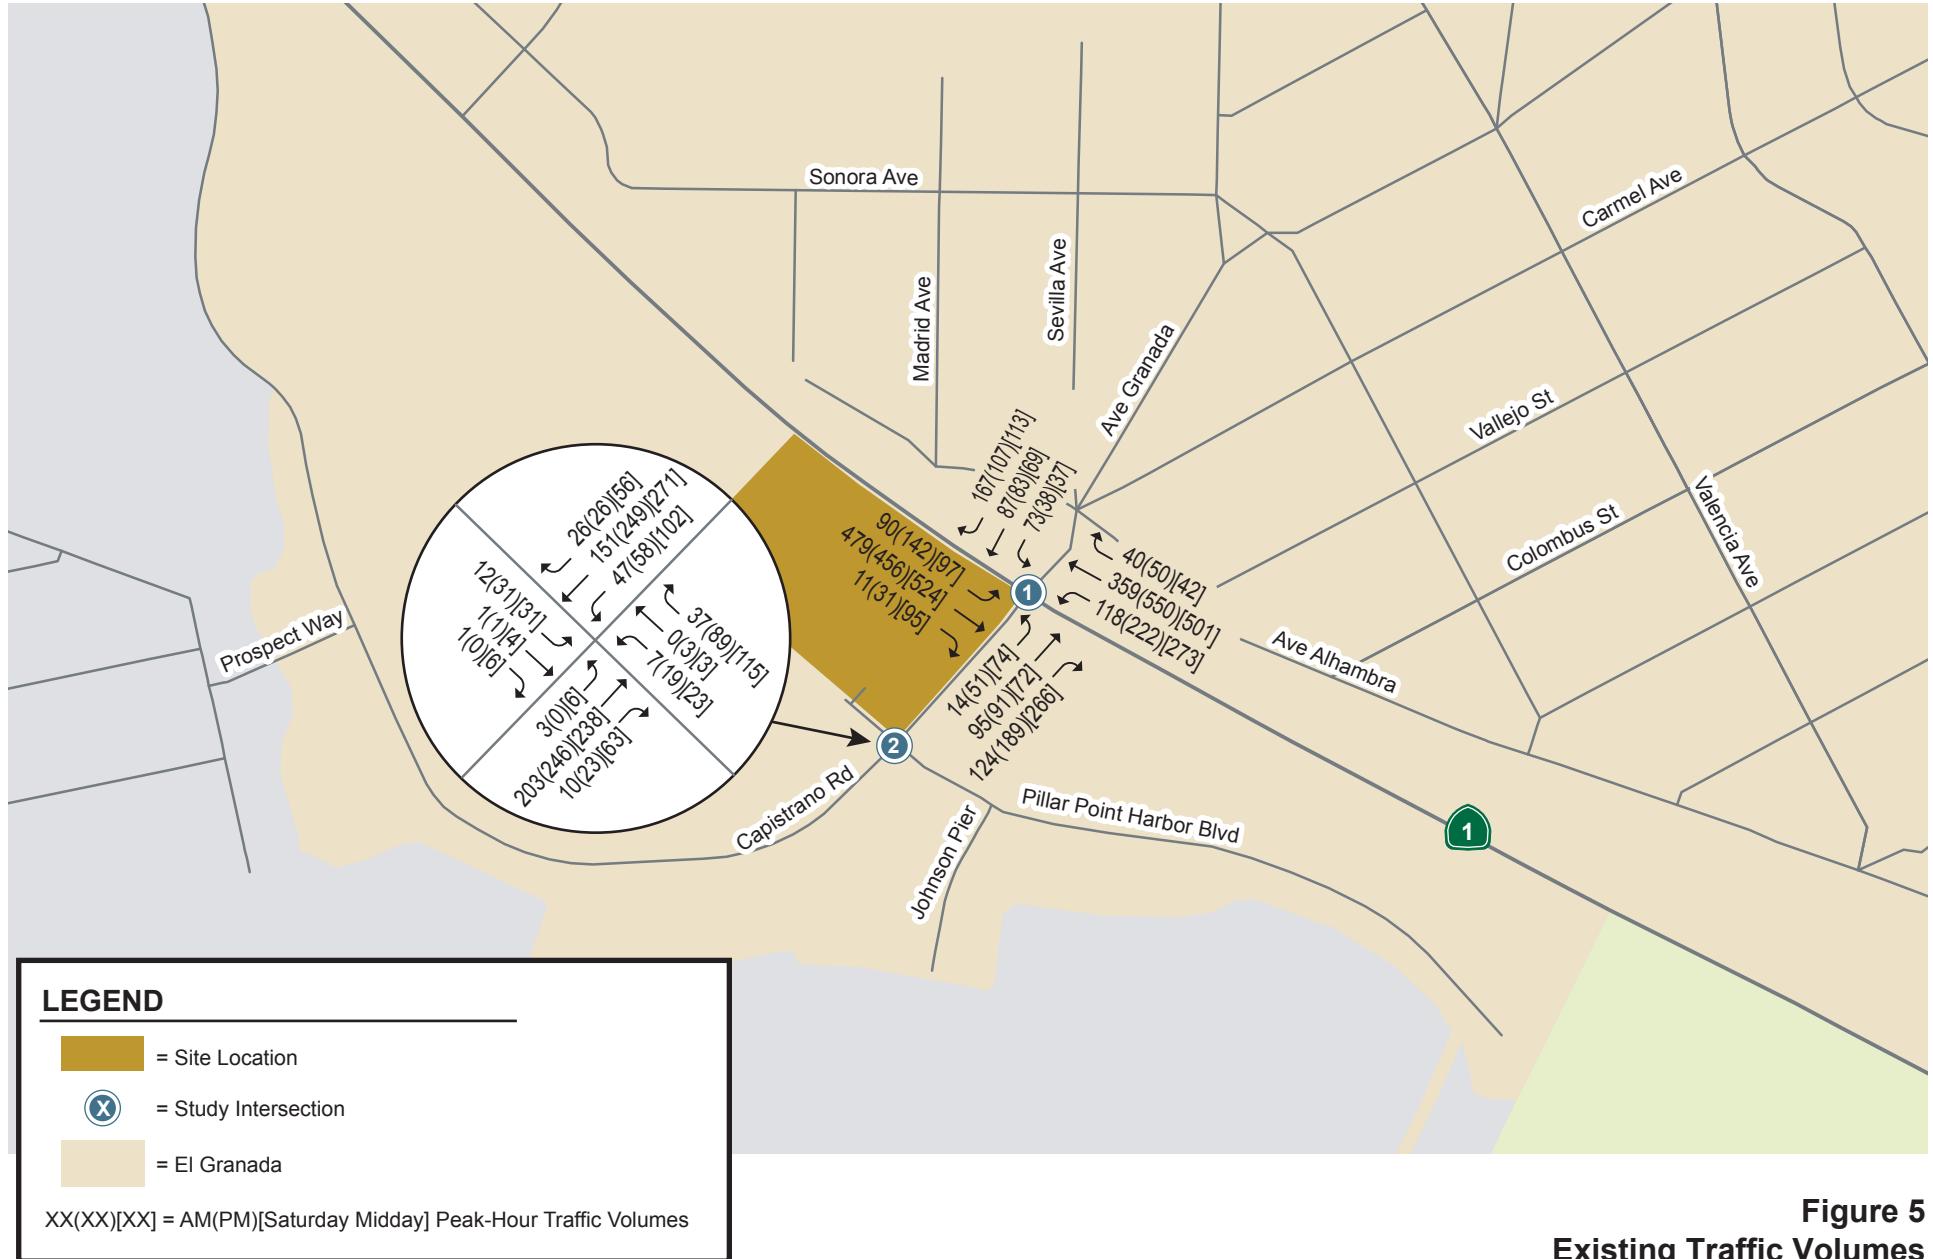

Figure 5
Existing Traffic Volumes

Existing Intersection Levels of Service

Intersection levels of service were evaluated against County of San Mateo standards. The results of the analysis show that the signalized study intersection currently operates at acceptable levels of service (LOS C or better, with each individual movement operating at LOS D or better) during the AM, PM, and Saturday midday peak hours (see Table 4). The intersection levels of service calculation sheets are included in Appendix D.

The analysis results show that the stop-controlled study intersection currently operates at LOS C or better during all peak hours. The level of service analysis indicates that vehicles on the stop-controlled approaches (Pillar Point Harbor Boulevard and the Shoppes at Harbor Village private driveway) would experience moderate delays.

Table 4
Existing Intersection Levels of Service

Study Number	Intersection	Peak Hour	Count Date	Control Type	Existing Conditions	
					Average Delay (sec.)	LOS
1	Capistrano Road and Cabrillo Highway (SR 1)	AM	3/2/17		17.9	B
		Midday	3/2/17	Signal	15.9	B
		PM	3/4/17		16.2	B
2	Capistrano Road and Pillar Point Harbor Boulevard	AM	5/4/17		12.7	B
		Midday	5/4/17	TWSC ¹	17.5	C
		PM	5/6/17		20.4	C

Notes:

TWSC = Two-Way Stop Control

¹ For TWSC intersections, the worst approach's delay and level of service are reported.

Bold indicates a substandard level of service.

Bold indicates a significant project impact.

Observed Existing Traffic Conditions

Traffic conditions were observed in the field in order to identify existing operational deficiencies and to confirm the accuracy of calculated intersection levels of service. The purpose of this effort was (1) to identify any existing traffic problems that may not be directly related to level of service, and (2) to identify any locations where the level of service analysis does not accurately reflect existing traffic conditions.

Overall, both study intersections operated adequately during the AM, PM, and Saturday midday peak hours of traffic, and the level of service analysis appears to accurately reflect actual existing traffic conditions. It should be noted that during the AM and Saturday midday peak hours congestion exists in the southbound direction, and in the northbound direction during the PM peak hour, along SR 1. However, the congestion does not spillback or cause any operational issues at the Cabrillo Highway (SR 1)/Capistrano intersection.

3. Background Conditions

This chapter presents a summary of the traffic conditions that would occur under background conditions. Background conditions are defined as conditions just prior to completion of the proposed development. Traffic volumes for background conditions comprise volumes from existing traffic counts plus traffic generated by other approved developments in the vicinity of the site.

Roadway Network and Traffic Volumes

The roadway network under background conditions is assumed to be the same as under existing conditions.

Background traffic volumes for the study intersections were estimated by adding to existing traffic volumes the trips generated by nearby approved developments that have not yet been constructed or occupied. Approved project trips and/or approved project information was obtained from the County of San Mateo. The list of nearby projects that are included in the background scenario can be found in Appendix B. The approved projects that would add traffic to the study area of Princeton Harbor include a motel expansion at 11 Avenue Alhambra and the Big Wave North Parcel development. Traffic volumes for all components of traffic are tabulated in Appendix C. Figure 6 shows the intersection turning-movement volumes under background conditions.

Intersection Level of Service Analysis

The results of the level of service analysis under background conditions are summarized in Table 5. The results show that, when measured against the County of San Mateo level of service standards, the Cabrillo Highway/Capistrano Road study intersection is expected to operate at an acceptable LOS B or better during the AM, PM, and Saturday midday peak hours of traffic. Level of service calculation sheets are included in Appendix D.

The analysis results also show that, under background conditions, the stop-controlled study intersection would continue to operate at LOS C or better during all peak hours. The level of service analysis indicates that vehicles on the stop-controlled approaches (Pillar Point Harbor Boulevard and the Shoppes at Harbor Village private driveway) would experience moderate delays.

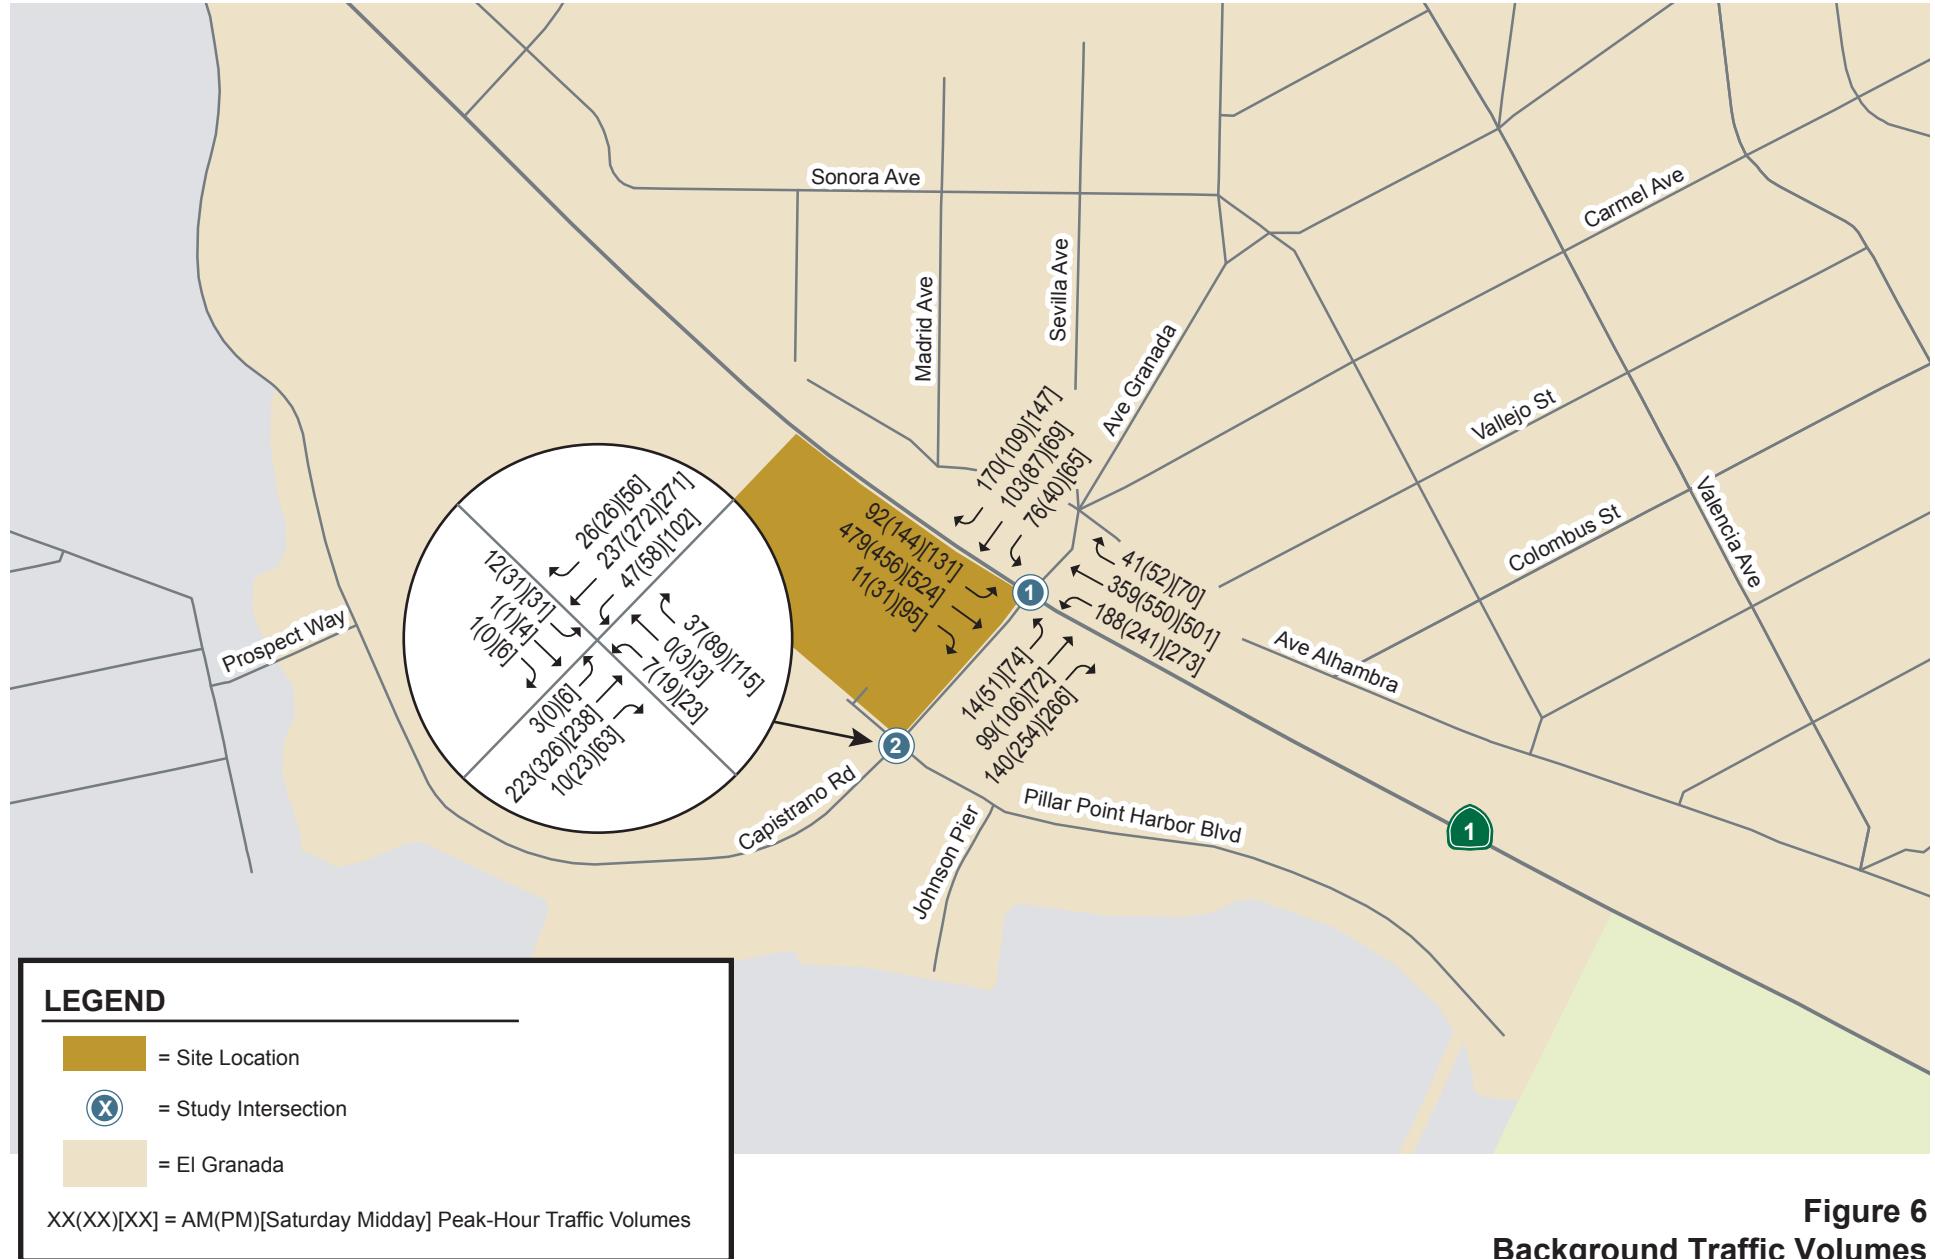

Figure 6
Background Traffic Volumes

Table 5
Background Intersection Levels of Service

Study Number	Intersection	Peak Hour	Control Type	Background Conditions	
				Average Delay (sec.)	LOS
1	Capistrano Road and Cabrillo Highway (SR 1)	AM		19.6	B
		Midday	Signal	16.9	B
		PM		18.6	B
2	Capistrano Road and Pillar Point Harbor Boulevard	AM		14.1	B
		Midday	TWSC ¹	20.3	C
		PM		20.4	C

Notes:

TWSC = Two-Way Stop Control

¹ For TWSC intersections, the worst approach's delay and level of service are reported.

Bold indicates a substandard level of service.

Bold indicates a significant project impact.

4. Project Conditions

This chapter describes traffic conditions with the project. It begins with a description of the transportation system under project conditions and the method by which project traffic is estimated. Project traffic is added to both existing conditions and background conditions.

Significant Impact Criteria

Significance criteria are used to establish what constitutes an impact. For this analysis, the criteria used to determine impacts on intersections are based on the thresholds established by the County of San Mateo.

County of San Mateo Definition of Significant Intersection Impacts

The project is said to create a significant adverse impact on traffic conditions at a signalized intersection in San Mateo County if for either peak hour:

1. The level of service at the intersection degrades from an acceptable LOS C under background conditions to an unacceptable LOS D, E, or F under project conditions, or
2. The level of service of an individual movement degrades from an acceptable LOS D under background conditions to an unacceptable LOS E or F under project conditions, or
3. The level of service at the intersection is an unacceptable LOS D, E, or F under background conditions and the addition of project trips causes the critical-movement delay at the intersection to increase by four (4) or more seconds.

A significant impact by the County of San Mateo standards is said to be satisfactorily mitigated when measures are implemented that would restore intersection level of service to background conditions or better.

Transportation Network under Project Conditions

It is assumed in this analysis that the transportation network under project conditions would be the same as the background transportation network.

Project Trip Estimates

The magnitude of traffic produced by a new development and the locations where that traffic would appear were estimated using a three-step process: (1) trip generation, (2) trip distribution, and (3) trip assignment. In determining project trip generation, the magnitude of traffic traveling to and from the proposed RV park was estimated for the AM, PM, and Saturday midday peak hours. As part of the

project trip distribution, the directions to and from which the project trips would travel were estimated. In the project trip assignment, the project trips were assigned to specific streets and intersections. These procedures are described below.

Trip Generation

Through empirical research, data have been collected that indicate the amount of traffic that can be expected to be generated by common land uses. The standard trip generation rates can be applied to help predict the future traffic increases that would result from a new development. The standard trip generation rates are published in the Institute of Transportation Engineers (ITE) *Trip Generation Manual*.

Project trip generation was estimated by applying to the size and use of the development the appropriate trip generation rates obtained from the ITE *Trip Generation Manual, 9th Edition* (2012). The trip generation rates for Campground/Recreational Vehicle Park (ITE Land Use 416) were applied to the project. In consultation with County staff, the upper-range trip rate during each peak hour was used to present a conservative estimate. Given that the ITE trip generation rates do not include Saturday peak hours, the Saturday midday peak hour was derived from trip generation surveys Hexagon Transportation Consultants, Inc. conducted in March 2017 at comparable RV parks within the Bay Area. The observed trip generation rates are presented in Table 6. The magnitude of traffic generated by the proposed RV park was estimated by multiplying the ITE and the observed RV parks' trip generation rates by the proposed development (see Table 7). Trip generation survey sheets of comparable RV parks are included in Appendix A.

Table 6
Trip Generation Rate Surveys

Count Location	Size	Saturday Peak Hour ¹			
		In	Out	Total	Rate
Pillar Point RV Park	49 spaces	12	17	29	0.59
Pelican Point RV Park	74 spaces	8	10	18	0.24
Maple Leaf RV Park	272 spaces	61	62	123	0.45
RV Park Average²		37	40	76	0.52

Notes:

¹ The Saturday peak hour is the highest hour between 12 PM - 3 PM.

² RV park average excludes the Pelican Point RV Park because the surveyed counts were significantly lower than the other surveyed parks.

Based on a size of 50 spaces, the proposed development would generate a total of 18 trips (5 incoming and 13 outgoing) during the AM peak hour, 22 trips (14 incoming and 8 outgoing) during the PM peak hour, and 26 trips (12 incoming and 14 outgoing) during the Saturday midday peak hour.

Table 7
Project Trip Generation Estimates

<u>Notes:</u>													
¹ Campground/Recreational Vehicle Park (Land Use 416) upper-range of rates published in ITE's <i>Trip Generation Manual, 9th Edition, 2012</i> .													
² The observed peak hour trip rate (per space) was based on surveys conducted by Hexagon Transportation Consultants in March 2017 at comparable RV parks.													

Trip Distribution and Assignment

The trip distribution pattern for the project was estimated based on existing travel patterns on the surrounding roadway network and major destinations in the area (see Figure 7). Project trips were assigned based on the directions of approach and departure, as well as the roadway network connections in accordance with the project trip distribution pattern.

Existing Plus Project Traffic Volumes

Project trips, as represented in the previously mentioned project trip assignment, were added to existing traffic volumes to obtain existing plus project traffic volumes. The existing plus project traffic volumes are shown on Figure 8.

Existing Plus Project Intersection Analysis

The results of the level of service analysis under existing plus project conditions show that the signalized study intersection would continue to operate at acceptable levels of service (LOS C or better, with each individual movement operating at LOS D or better) during all peak hours (see Table 8). The intersection levels of service calculation sheets are included in Appendix D.

The analysis results also show that the stop-controlled study intersection would operate at LOS C or better during all peak hours. The level of service analysis indicates that vehicles on the stop-controlled approaches (Pillar Point Harbor Boulevard and the Shoppes at Harbor Village private driveway) would experience moderate delays.

Existing Plus Project Traffic Volumes

Table 8
Existing Plus Project Level of Service Summary

Study Number	Intersection	Peak Hour	Control Type	Existing Conditions	
				No Project	
				Average Delay (sec.)	LOS
1	Capistrano Road and Cabrillo Highway (SR 1)	AM	Signal	17.9	B
		Midday		15.9	B
		PM		16.2	B
2	Capistrano Road and Pillar Point Harbor Boulevard	AM	TWSC ¹	12.7	B
		Midday		17.5	C
		PM		20.4	C

Notes:

TWSC = Two-Way Stop Control

¹ For TWSC intersections, the worst approach's delay and level of service are reported.

Bold indicates a substandard level of service.

Bold indicates a significant project impact.

Background Plus Project Traffic Volumes

Peak hour traffic volumes with the project were estimated by adding to background traffic volumes the additional traffic generated by the project. Project conditions were evaluated relative to background conditions in order to determine potential project impacts. The project traffic volumes are shown graphically on Figure 9 for background plus project conditions. Traffic volumes for all components of traffic are tabulated in Appendix B.

Background Plus Project Intersection Analysis

The results of the level of service analysis under background plus project conditions show that, when measured against the San Mateo County standards, the signalized study intersection would operate at acceptable levels of service (LOS C or better, with each individual movement operating at LOS D or better) during the AM, PM, and Saturday midday peak hours (see Table 9). The intersection levels of service calculation sheets are included in Appendix D.

The analysis results also show that, under background plus project conditions, the two-way stop-controlled study intersection would operate at LOS C or better during all peak hours. The analysis indicates that vehicles on the stop-controlled approaches (the Pillar Point Harbor Boulevard and the Shoppes at Harbor Village private driveway) would experience moderate delays.

Bold indicates a substandard level of service.

Bold indicates a significant project impact.

5. Cumulative Conditions

This chapter presents a summary of the traffic conditions that would occur under cumulative conditions with the proposed project. Cumulative conditions represent future traffic conditions with expected growth in the area. The expected future traffic growth conditions are estimated by applying an annual growth factor to the existing counts. Cumulative conditions reflect a horizon year of 2022, five years of growth.

Roadway Network and Traffic Volumes

The intersection lane configurations under cumulative conditions were assumed to be the same as described under background conditions.

Cumulative volume for the study intersections was estimated by applying a 1% annual growth rate to the existing traffic counts and adding traffic from approved developments. The growth rate, which has been approved by the County of San Mateo, was applied to the study intersections through the year 2022. Project trips were then added to the growth estimates to create the cumulative conditions volumes (see Figure 10).

Intersection Levels of Service Analysis

The results of the level of service analysis under cumulative conditions show that, measured against the San Mateo County standards, the signalized study intersection would operate at an acceptable level of service (LOS C or better, with each individual movement operating at LOS D or better) during the AM, PM, and Saturday midday peak hours (see Table 10). The intersection levels of service calculation sheets are included in Appendix D.

The analysis results also show that, under cumulative plus project conditions, the two-way stop-controlled study intersection would operate at LOS C or better during all peak hours. The analysis indicates that vehicles on the stop-controlled approaches (the Pillar Point Harbor Boulevard and the Shoppes at Harbor Village private driveway) would experience moderate delays.

Notes:

TWSC = Two-Way Stop Control

¹ For TWSC intersections, the worst approach's delay and level of service are reported.

Bold indicates a substandard level of service.

Bold indicates a significant project impact.

6. Other Transportation Issues

This chapter presents other transportation issues associated with the project. These include an analysis of:

- Vehicle Queuing
- Site access and circulation
- Potential impacts to transit, bicycle and pedestrian facilities

The analyses in this chapter are based on professional judgement in accordance with the standards and methods employed by the traffic engineering community.

Queuing Analysis

The operations analysis is based on vehicle queuing for high-demand movements at intersections. Vehicle queues were estimated using a Poisson probability distribution, which estimates the probability of "n" vehicles for a vehicle movement using the following formula:

$$P(x=n) = \frac{\lambda^n e^{-(\lambda)}}{n!}$$

Where:

P (x=n) = probability of "n" vehicles in queue per lane

n = number of vehicles in the queue per lane

λ = average number of vehicles in the queue per lane (vehicles per hour per lane/signal cycles per hour)

The basis of the analysis is as follows: (1) the Poisson probability distribution is used to estimate the 95th percentile maximum number of queued vehicles per signal cycle for a particular movement; (2) the estimated maximum number of vehicles in the queue is translated into a queue length, assuming 25 feet per vehicle; and (3) the estimated maximum queue length is compared to the existing or planned available storage capacity for the movement.

The following three left-turn movements were examined as part of the queuing analysis for this project:

- Northbound left turn at Cabrillo Highway (SR 1) and Capistrano Road
- Eastbound left/through/right turn at Cabrillo Highway (SR 1) and Capistrano Road
- Southbound left turn at Pillar Point Harbor Boulevard and Capistrano Road

The estimated queue lengths based on the Poisson numerical calculations show no queuing deficiencies at the three locations (see Table 11).

Site Access and On-Site Circulation

The site access and circulation evaluation is based on the April 9, 2017 site plan prepared by Jacobsen & Associates Architects, LLC (see Figure 2). On-site vehicular circulation was reviewed in accordance with generally accepted traffic engineering standards.

Project Driveway Operations

Site access was evaluated to determine the adequacy of the site's proposed driveway with regard to the following: traffic volume, delays, vehicle queues, geometric design, and corner sight distance. Vehicular access to the project site would be provided via a driveway adjacent to the Shoppes at Harbor Village shopping center parking lot. The project site driveway would measure 34 feet wide at the throat. Access to the project site driveway would be shared with the existing shopping center traffic via a shared full-access driveway located as the north leg of the Pillar Point Harbor Boulevard/Capistrano Road intersection. The shared-access driveway is 24 feet wide for the entrance lane and 26 feet wide for the exit lane with a 6-foot wide median. The County of San Mateo does not specify standards for a two-way driveway. However, based on AASHTO's *Geometric Design of Highways and Streets, 6th Edition* (2011), a two-way driveway where large vehicles are expected should be a minimum of 18 feet wide.

Driveway Design

Based on the project description, the project would accommodate recreational vehicles and vehicles with attached trailers, thus requiring a larger turning radius within the driveway design to accommodate large vehicles. The shared-access driveway located at the Pillar Point Harbor Boulevard/Capistrano Road intersection includes a 6-foot wide raised median that would create challenges for large vehicles turning into the driveway. Therefore, vehicle turning paths for a smaller single-unit truck (WB 30), a larger motor home vehicle, and a passenger car with a camper trailer were reviewed at the shared-access driveway. The review of vehicle turning paths indicates that the approximately 24-foot width of the driveway entrance would be adequate for all three vehicle types to perform the right-turn movement into the shared-access driveway. A motor home vehicle with an attached boat may not be applicable to the project site given that it will not fit within any of the provided parking spaces. However, the review indicates that a motor home vehicle with an attached boat also would be able to complete the right-turn movement into the shared-access driveway, but would need to use some of the through-lane on Capistrano Road. Figure 11 shows that the proposed shared-access driveway design would accommodate a smaller single-unit trucks, larger motor home vehicles, and cars with a camper trailer.

Princeton Harbor RV Park

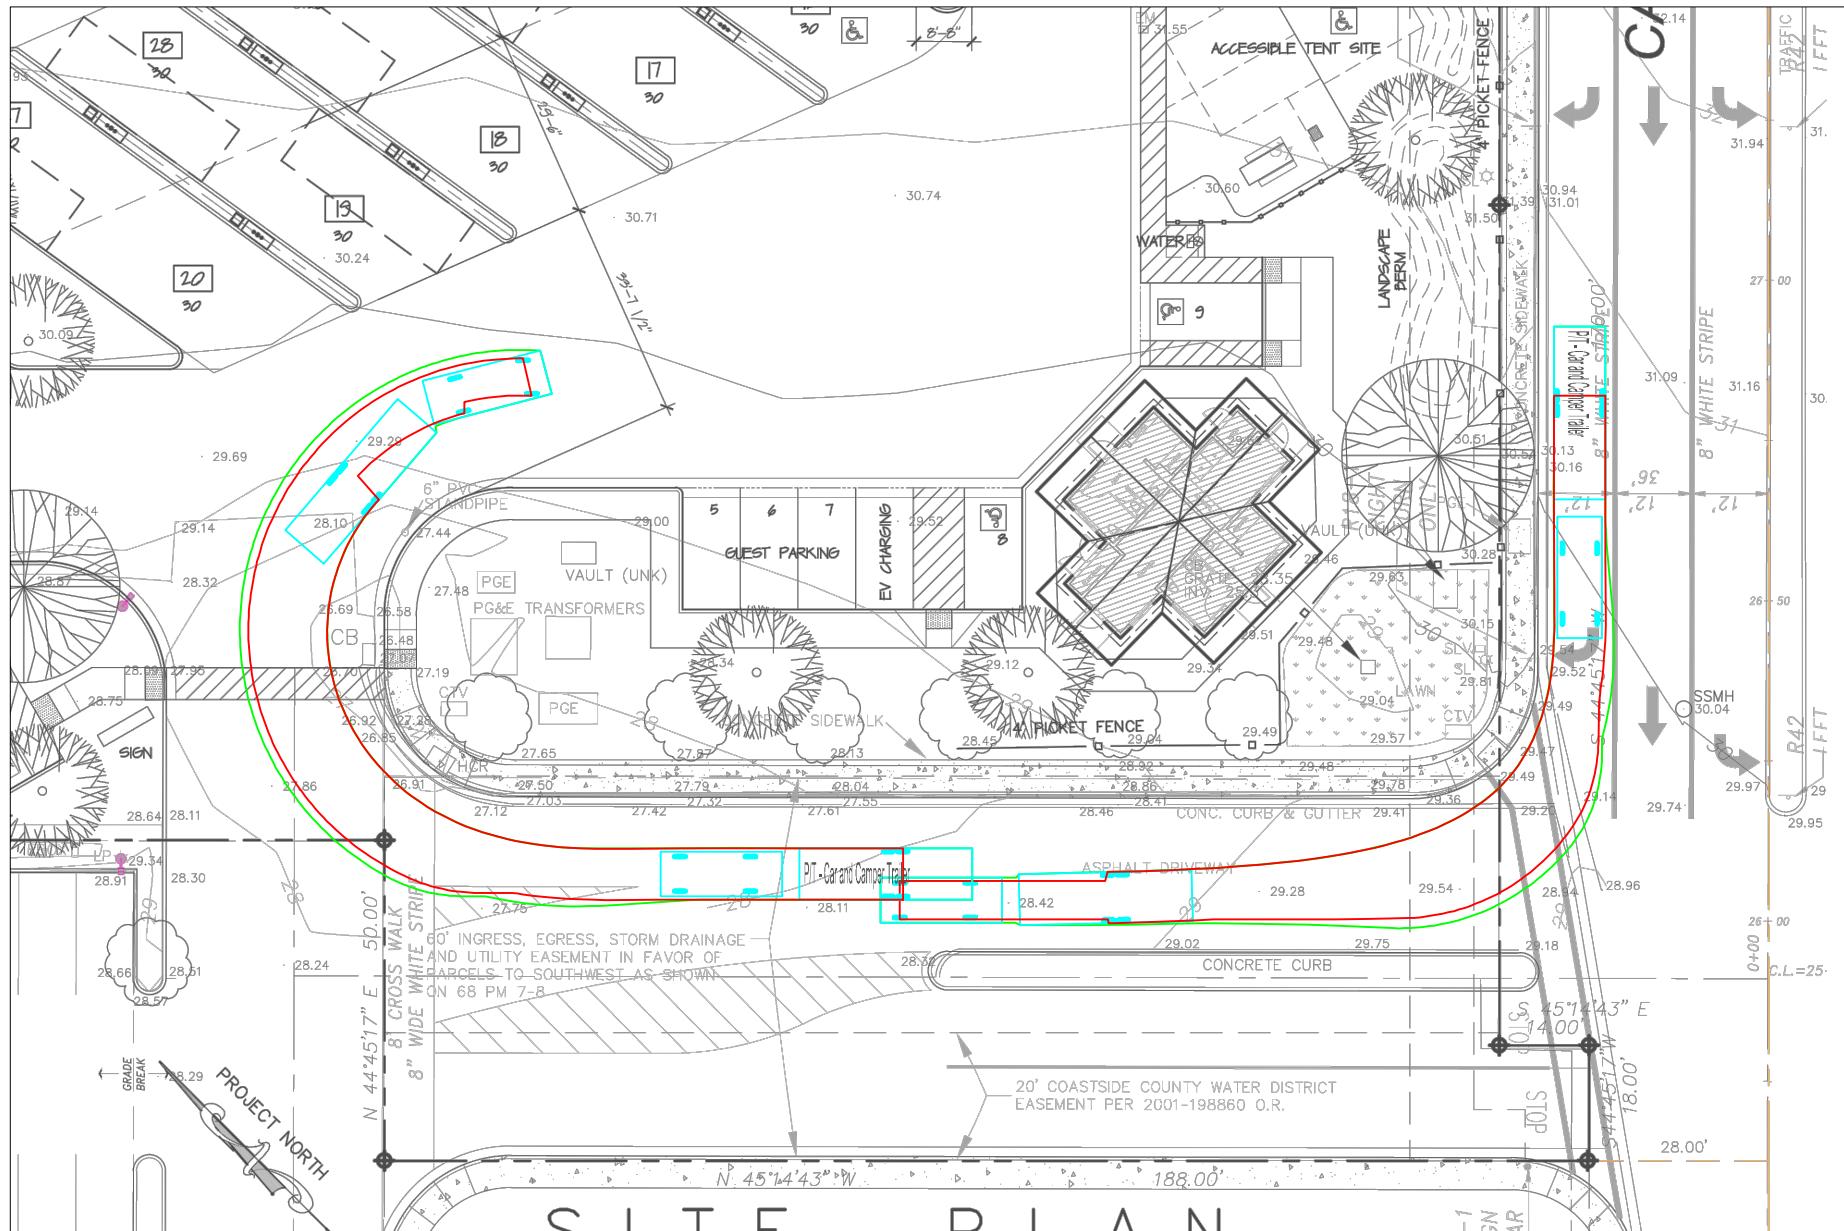

Figure 11
Shared-Access Driveway Turning Paths

Sight Distance at the Project Driveway

There are no existing trees or visual obstructions along the project frontage to obscure sight distance at the project driveway. There are also no curves in the roadway along the project frontage on Capistrano Road. Clear sight distance triangles should be provided at the project driveways to optimize sight distance. Any landscaping and signage should be located in such a way to ensure an unobstructed view for drivers exiting the site.

On-Site Circulation

The on-site circulation was reviewed in accordance with generally accepted traffic engineering standards. Generally, the proposed plan would provide vehicle traffic with adequate connectivity through the parking areas. The project would provide 60-degree parking throughout the project site, adjacent to 25-foot and 30-foot wide drive aisles accommodating two-way traffic flow. Typically, two-way drive aisles adjacent to 60-degree parking are required to be a minimum of 24 feet wide, to provide sufficient room for vehicles to back out of the parking stalls. The aisle widths are adequate for recreational vehicles and trailers. The RV parking stalls are shown to be 20 feet wide with varying lengths to accommodate various sizes of RVs.

Transit, Pedestrian and Bicycle Analysis

Pedestrian facilities in the study area consist of sidewalks located on both sides of Capistrano Road and along the west side of Pillar Point Harbor Boulevard in the vicinity of the project. Marked crosswalks are provided at the Cabrillo Highway/Capistrano Road and Pillar Point Harbor Boulevard/Capistrano Road intersections (see Chapter 2 for detailed discussion). The overall network of sidewalks and crosswalks in the study area has good connectivity and provides pedestrians with safe routes to transit services and other points of interest in the vicinity of the project site.

Bicycle facilities within the study area consist of a multi-use path as part of the Coastal Trail, south of the project site and accessible via Pillar Point Harbor Boulevard, which is designated as a Class III bike route (see Chapter 2 for detailed discussion). The County of San Mateo plans to develop the Parallel Trail, which would run on the east side of SR 1 from Montara to Half Moon Bay. The sidewalks and bikeways in the vicinity of the project site are adequate to serve the proposed RV park.

Transit services in the study area are provided by SamTrans. The study area is served directly by two local bus routes. It is expected that there would be an insignificant number of people that would use transit to and from the project site. The traffic volumes added to Capistrano Road and Cabrillo Highway would have a less than significant impact on bus travel times.

7. Conclusions

The potential impacts of the project were evaluated in accordance with the standards set forth by the County of San Mateo and the City/County Association of Governments (C/CAG) of San Mateo County CMP. The study included the analysis of traffic conditions at one signalized intersection and one unsignalized intersection during the weekday AM, PM, and Saturday midday peak hours. The analysis focuses on the weekday peak commute periods between 7:00 AM and 9:00 AM and 4:00 PM and 6:00 PM, and the Saturday midday peak hour is typically between 11:00 AM and 3:00 PM. It is during these hours that traffic conditions on the surrounding roadways are generally the most congested and the impact on the roadway system by traffic from the proposed RV park would be greatest.

Intersection Level of Service Analysis

The results of the intersection level of service analysis determined that under all scenarios with and without the project, the signalized study intersection, Cabrillo Highway (SR 1)/Capistrano Road, would operate at an acceptable level of service (LOS C or better, with each individual movement operating at LOS D or better) during the AM, PM, and Saturday midday peak hours. In addition, the analysis results show that the two-way stop-controlled study intersection would operate at LOS C or better during all peak hours. The analysis indicates that vehicles on the stop-controlled approaches (the Pillar Point Harbor Boulevard and the Shoppes at Harbor Village private driveway) would experience moderate delays.

Other Transportation Issues

Based on a review of the project site plan, there would be no issues regarding site access along Capistrano Road; and no issues are expected to arise regarding on-site circulation. The driveway design of the proposed shared-access driveway would provide adequate clearance for large vehicles to perform turn movements. Furthermore, the proposed project would not have an adverse effect on the existing transit, pedestrian, or bicycle facilities in the study area. Thus, no project sponsored improvements would be necessary.

PLN2014-00273	4.7E+07	Approved	1/21/2016	923 COLUMBUS ST, EL GRANADA	EL GRANADA	CDP & Subdivision to split a 16,292 sq/ft parcel into 2 lots (8,146 sq/ft each). Requires an Initial Study/Neg. Dec. because the slope of the parcel is over 20% (does not qualify for Cat. Exempt. Sec 15315)
PLN2014-00310	3.7E+07	Agency Referrals	10/15/2014	520 MARINE BLVD, MOSS BEACH, CA 94038	MOSS BEACH	Coastside Design Review & CDX for a new 2,443 sq/ft 2-story single family residence with an attached 503 sq/ft garage on a 7,666 sq/ft parcel; includes removal of 1 tree.
PLN2014-00350	4.7E+07	Agency Referrals	10/15/2014	224 DEL MONTE RD, EL GRANADA 94019	EL GRANADA	Coastside Design Review, CDP & Grading Permit for a new 2,658 s/f single family residence with 506 s/f attached garage. Grading includes 1,300 cubic yards of cut (no fill) & removal of one 48" Monterey pine tree.
PLN2014-00435	4.7E+07	Agency Referrals	11/20/2014	435 AVENUE DEL ORO, EL GRANADA, CA 94018	EL GRANADA	Coastside Design Review, CDX & Certificate of Compliance (to confirm parcel legality) for new 2,320 s/f single-family residence with attached 410 s/f garage & 154 s/f rear yard deck; includes 5 trees proposed for removal (12" pine, 36" pine, 24" pine, 28" pine, 52" pine) & Grading of 215 cu/yds of cut.
PLN2014-00453	4.8E+07	CEQA Preparation	5/27/2016	412 LEE AVE, MIRAMAR, CA 94019	MIRAMAR	Coastside Design Review & Staff-level CDP for a new 1,819 s/f 2-story single family residence, plus an attached 396 s/f garage on a legal 4,800 s/f parcel (COC recorded PLN2014-00138); no trees proposed for removal. Associated with BLD2015-00603.
PLN2014-00490	3.7E+07	Agency Referrals	2/18/2015	1900 EAST AVE, MONTARA, CA	MONTARA	Coastside Design Review & CDX for new 3,152 sq/ft residence (includes 625 s/f garage & 60 s/f covered porch) & COC/Type A to confirm parcel legality of APN 037-015-090 (lots 39 & 40 separately conveyed on 9/20/1915) on a 6,000 s/f parcel; includes removal of 6 trees. (7/5/16 TBD: Waiting for CCC to determine whether a CDP is required; waiting for civil engineer to estimate grading for house to see if Grading Permit is required).
PLN2015-00007	3.6E+07	Approved	5/19/2015	1160 CEDAR ST, MONTARA, CA	MONTARA	Admin Review & CDX for new 2nd Unit - involving the conversion of 654 sq/ft of an existing lower level residence into a 2nd unit; associated with BLD2015-00763.

PLN2015-00152	4.8E+07	Approved	4/27/2017	3260 N CABRILLO HWY, MIRAMAR, CA	MIRAMAR	Certification of a Re-circulated Initial Study/Mitigated Negative Declaration (IS/MND) and consideration of a Coastal Development Permit and Design Review to allow construction of a new 1,724 sq. ft., two-story, single-family residence, plus a 400 sq. ft. attached two-car garage, and a 551 sq. ft. Second Unit, on an existing 5,080 sq. ft. legal parcel. The Second Unit requires a staff-level ministerial permit. Arroyo de en Medio Creek is located on a southeast portion of the parcel. The project is appealable to the California Coastal Commission.
PLN2015-00376	4.7E+07	Approved	6/9/2016	Coronado Ave. @ Ave. Portola, El Granada, CA	EL GRANADA	Design Review & staff-level CDP for a triplex, consisting of three 1-BR units each with a 1-car garage on APN 047-233-360. No tree removal & only minor grading. Project is not appealable to the CA Coastal Commission. (Associated with similar & concurrent triplex proposal, PLN2015-00377 on adjacent parcel).
PLN2015-00404	4.7E+07	Approved	6/9/2016	401 PALOMA AVE, EL GRANADA, CA	EL GRANADA	Coastside Design Review, Certificate of Compliance (Type A), & CDX for construction of a new 2,280 s.f. single family residence, with a 510 s.f. attached garage on a corner parcel (7,818 s.f.) in El Granada. No trees to be removed & 233 c.y. of grading.
PLN2015-00412	4.7E+07	Approved	3/28/2017	265 EL GRANADA BLVD, EL GRANADA, CA	EL GRANADA	MAJOR REVISION of a previous approval - rotafton of home, expansion of roof deck & a new 507 sf 2nd dwelling unit. Coastside Design Review & CDX for a new 2-story 2308 s/f single-family residence with attached 436 s/f garage. No grading; 8 eucalyptus trees proposed for removal.
PLN2016-00011	4.7E+07	Approved	12/13/2016	755 SAN CARLOS AVE, EL GRANADA, CA	EL GRANADA	Certification of an Initial Study/Mitigated Negative Declaration and approval of a Coastal Development Permit, a Design Review, and a Certificate of Compliance (Type B) to legalize a 6,350 sq. ft. undeveloped parcel and to allow construction of a 2,200 sq. ft. single-family residence located on San Carlos Avenue in the El Granada area of San Mateo County. The project is appealable to the California Coastal Commission.
PLN2016-00016	4.7E+07	Approved	6/29/2016	640 FERDINAND AVE, EL GRANADA, CA	EL GRANADA	Coastside Design Review, CDX and Grading Permit involving 400 cu yds. of cut and 0 cu. yds. of fill for a new single-family dwelling on an existing legal lot (COC recorded; PLN2013-00159)
PLN2016-00024	4.7E+07	Approved	3/10/2016	847 FRANCISCO ST, UNIT 2ND, EL GRANADA, CA 94019	EL GRANADA	2nd Unit Admin Review & CDX for conversion of 2 BRs on lower floor of existing 4-BR house (no expansion of footprint) to a 403 s/f 2nd unit, with a compliant single car parking space to side of house; associated with BLD2016-00004
PLN2016-00054	4.7E+07	Approved	7/8/2016	917 PALMA ST, EL GRANADA, CA	EL GRANADA	Coastside Design Review & CDX for a new 2337 s/f 2-story with attached 527 s/f garage on a 6000 s/f legal parcel. Grading includes 90 cu/yds of cut; no tree removal; parcel legality previously confirmed by Merger (MIS94-0015).
PLN2016-00136	4.7E+07	Agency Referrals	4/14/2016	11 AVENUE ALHAMBRA, EL GRANADA, CA 94019	EL GRANADA	CDP, Design Review, & Use Permit Amendment (original UP USE84-52) to allow for the addition of 14 guest rooms, one manager's apartment, a conference room, a storage room, & a new reception area to an existing 18-room motel. Will require an Initial Study/Neg Dec. This project is appealable to the California Coastal Commission.
PLN2016-00160	3.6E+07	Project Decision	9/1/2016	1060 DATE ST, MONTARA, CA	MONTARA	Coastside Design Review & CDX for a new 1,682 sq/ft single family residence with an attached 440 sq/ft garage on a 4,998 sq/ft parcel. LLA in 1993 established the parcel as legal (LLA93-0011)
PLN2016-00283	4.7E+07	Approved	3/28/2017	910 MALAGA ST, EL GRANADA, CA	EL GRANADA	Coastside DR & CDX for a 480 SF addition of 1st floor living room & 2nd floor enclosed "sun room" to existing 1511 SF single family residence.
PLN2016-00317	3.7E+07	Agency Referrals	9/15/2016	146 LA GRANDE AVE, MOSS BEACH, CA	MOSS BEACH	Coastside Design Review & CDP (hearing level) for a new 2-story single family house (includes demolition of existing house) located at 147 La Grande Ave., Moss Beach (037-258-260; zoning: R-1/S-17/DR/GH); parcel legality not applicable since this replaces existing house. Project is appealable to the California Coastal Commission.
PLN2016-00337	4.8E+07	Staff Decision - Hearings	2/10/2017	Terrace Ave @ Miramar Dr., Miramar	MIRAMAR	Coastside Design Review to allow construction of a new 2-story 3,546 sq. ft. single-family residence with an attached 487 sq. ft. 2-car garage, including a 1,152 sq. ft. 2nd Unit with a detached 400 sq. ft. carport, on an existing 22,337 sq. ft. legal parcel (COC PLN2015-00444) and "After-the-Fact" staff level Coastal Development Permit (CDP) for removal of 17 significant trees, in order to resolve VIO2016-00141. Only minor grading is proposed. Seventeen (17) existing significant trees are proposed for removal. The project is not appealable to the California Coastal Commission.
PLN2016-00346	4.7E+07	Agency Referrals	8/24/2016	0 OBISPO RD, EL GRANADA, CA 94019	EL GRANADA	CDP, Design Review, Use Permit, Variance & Grading Permit to construct a new 12,340 SF fire station on a vacant legal parcel (PLN2015-00019), along with a Subdivision to split the 2.5-acre parcel along the C-1 & EG zoning boundary line. Project includes for 10,310 cy of grading (10,150 cy of cut & 160 cy of fill) & removal of 7 trees. Coastside Fire Protection District is acting as lead agency for the EIR. This project relocates existing fire station at 531 Obispo Rd.
PLN2016-00429	3.7E+07	Project Analysis	2/10/2017	Marine BLVD, Moss Beach, CA	MOSS BEACH	Coastside Design Review & CDP for new 1824 sq/ft SFD on a 3,800 sq/ft parcel. Project does not require a non-conforming use permit because the parcel exceeds the 3,500 sq/ft threshold as stipulated by Sect. 6133(3)(b)(1)(a). Parcel is legal pursuant to recorded COC (PLN2014-00140).
PLN2016-00525	4.7E+07	Agency Referrals	4/21/2017	155 BROADWAY, EL GRANADA, CA	PRINCETON	CDP & Use Permit for the HMB Distillery. The Distillery already has a UP to operate at a different location, but they are proposing to move to another location Princeton. This is a change of use for this new location & an intensification of use, thus requiring a new UP & CDP. Project qualifies for a Use Permit in the CCR zoning district because they do limited indoor sales during tasting tours.
PLN2017-00154	3.6E+07	Submitted	4/20/2017	George St @ Birch St., Montara	MONTARA	Coastside Design Review & CDX for a new 3,300 sq/ft SFD with attached garage on a legal 6,249 sq/ft parcel (COC recorded; PLN2017-00020).

PLN2014-00350	4.7E+07	Agency Referrals	10/15/2014	224 DEL MONTE RD, EL GRANADA 94019	EL GRANADA	Coastside Design Review, CDP & Grading Permit for a new 2,658 s/f single family residence with 506 s/f attached garage. Grading includes 1,300 cubic yards of cut (no fill) & removal of one 48" Monterey pine tree.
PLN2014-00435	4.7E+07	Agency Referrals	11/20/2014	435 AVENUE DEL ORO, EL GRANADA, CA 94018	EL GRANADA	Coastside Design Review, CDX & Certificate of Compliance (to confirm parcel legality) for new 2,320 s/f single-family residence with attached 410 s/f garage & 154 s/f rear yard deck; includes 5 trees proposed for removal (12" pine, 36" pine, 24" pine, 28" pine, 52" pine) & Grading of 215 cu/yds of cut.
PLN2014-00453	4.8E+07	CEQA Preparation	5/27/2016	412 LEE AVE, MIRAMAR, CA 94019	MIRAMAR	Coastside Design Review & Staff-level CDP for a new 1,819 s/f 2-story single family residence, plus an attached 396 s/f garage on a legal 4,800 s/f parcel (COC recorded PLN2014-00138); no trees proposed for removal. Associated with BLD2015-00603.
PLN2014-00490	3.7E+07	Agency Referrals	2/18/2015	1900 EAST AVE, MONTARA, CA	MONTARA	Coastside Design Review & CDX for new 3,152 sq/ft residence (includes 625 s/f garage & 60 s/f covered porch) & COC/Type A to confirm parcel legality of APN 037-015-090 (lots 39 & 40 separately conveyed on 9/20/1915) on a 6,000 s/f parcel; includes removal of 6 trees. (7/5/16 TBD: Waiting for CCC to determine whether a CDP is required; waiting for civil engineer to estimate grading for house to see if Grading Permit is required).
PLN2015-00007	3.6E+07	Approved	5/19/2015	1160 CEDAR ST, MONTARA, CA	MONTARA	Admin Review & CDX for new 2nd Unit - involving the conversion of 654 sq/ft of an existing lower level residence into a 2nd unit; associated with BLD2015-00763.

PLN2015-00152	4.8E+07	Approved	4/27/2017	3260 N CABRILLO HWY, MIRAMAR, CA	MIRAMAR	Certification of a Re-circulated Initial Study/Mitigated Negative Declaration (IS/MND) and consideration of a Coastal Development Permit and Design Review to allow construction of a new 1,724 sq. ft., two-story, single-family residence, plus a 400 sq. ft. attached two-car garage, and a 551 sq. ft. Second Unit, on an existing 5,080 sq. ft. legal parcel. The Second Unit requires a staff-level ministerial permit. Arroyo de en Medio Creek is located on a southeast portion of the parcel. The project is appealable to the California Coastal Commission.
PLN2015-00376	4.7E+07	Approved	6/9/2016	Coronado Ave. @ Ave. Portola, El Granada, CA	EL GRANADA	Design Review & staff-level CDP for a triplex, consisting of three 1-BR units each with a 1-car garage on APN 047-233-360. No tree removal & only minor grading. Project is not appealable to the CA Coastal Commission. (Associated with similar & concurrent triplex proposal, PLN2015-00377 on adjacent parcel).
PLN2015-00404	4.7E+07	Approved	6/9/2016	401 PALOMA AVE, EL GRANADA, CA	EL GRANADA	Coastside Design Review, Certificate of Compliance (Type A), & CDX for construction of a new 2,280 s.f. single family residence, with a 510 s.f. attached garage on a corner parcel (7,818 s.f.) in El Granada. No trees to be removed & 233 c.y. of grading.
PLN2015-00412	4.7E+07	Approved	3/28/2017	265 EL GRANADA BLVD, EL GRANADA, CA	EL GRANADA	MAJOR REVISION of a previous approval - rotafton of home, expansion of roof deck & a new 507 sf 2nd dwelling unit. Coastside Design Review & CDX for a new 2-story 2308 s/f single-family residence with attached 436 s/f garage. No grading; 8 eucalyptus trees proposed for removal.
PLN2016-00011	4.7E+07	Approved	12/13/2016	755 SAN CARLOS AVE, EL GRANADA, CA	EL GRANADA	Certification of an Initial Study/Mitigated Negative Declaration and approval of a Coastal Development Permit, a Design Review, and a Certificate of Compliance (Type B) to legalize a 6,350 sq. ft. undeveloped parcel and to allow construction of a 2,200 sq. ft. single-family residence located on San Carlos Avenue in the El Granada area of San Mateo County. The project is appealable to the California Coastal Commission.
PLN2016-00016	4.7E+07	Approved	6/29/2016	640 FERDINAND AVE, EL GRANADA, CA	EL GRANADA	Coastside Design Review, CDX and Grading Permit involving 400 cu yds. of cut and 0 cu. yds. of fill for a new single-family dwelling on an existing legal lot (COC recorded; PLN2013-00159)
PLN2016-00024	4.7E+07	Approved	3/10/2016	847 FRANCISCO ST, UNIT 2ND, EL GRANADA, CA 94019	EL GRANADA	2nd Unit Admin Review & CDX for conversion of 2 BRs on lower floor of existing 4-BR house (no expansion of footprint) to a 403 s/f 2nd unit, with a compliant single car parking space to side of house; associated with BLD2016-00004
PLN2016-00054	4.7E+07	Approved	7/8/2016	917 PALMA ST, EL GRANADA, CA	EL GRANADA	Coastside Design Review & CDX for a new 2337 s/f 2-story with attached 527 s/f garage on a 6000 s/f legal parcel. Grading includes 90 cu/yds of cut; no tree removal; parcel legality previously confirmed by Merger (MIS94-0015).
PLN2016-00136	4.7E+07	Agency Referrals	4/14/2016	11 AVENUE ALHAMBRA, EL GRANADA, CA 94019	EL GRANADA	CDP, Design Review, & Use Permit Amendment (original UP USE84-52) to allow for the addition of 14 guest rooms, one manager's apartment, a conference room, a storage room, & a new reception area to an existing 18-room motel. Will require an Initial Study/Neg Dec. This project is appealable to the California Coastal Commission.
PLN2016-00160	3.6E+07	Project Decision	9/1/2016	1060 DATE ST, MONTARA, CA	MONTARA	Coastside Design Review & CDX for a new 1,682 sq/ft single family residence with an attached 440 sq/ft garage on a 4,998 sq/ft parcel. LLA in 1993 established the parcel as legal (LLA93-0011)
PLN2016-00283	4.7E+07	Approved	3/28/2017	910 MALAGA ST, EL GRANADA, CA	EL GRANADA	Coastside DR & CDX for a 480 SF addition of 1st floor living room & 2nd floor enclosed "sun room" to existing 1511 SF single family residence.
PLN2016-00317	3.7E+07	Agency Referrals	9/15/2016	146 LA GRANDE AVE, MOSS BEACH, CA	MOSS BEACH	Coastside Design Review & CDP (hearing level) for a new 2-story single family house (includes demolition of existing house) located at 147 La Grande Ave., Moss Beach (037-258-260; zoning: R-1/S-17/DR/GH); parcel legality not applicable since this replaces existing house. Project is appealable to the California Coastal Commission.
PLN2016-00337	4.8E+07	staff Decision - Hearing	2/10/2017	Terrace Ave @ Miramar Dr., Miramar	MIRAMAR	Coastside Design Review to allow construction of a new 2-story 3,546 sq. ft. single-family residence with an attached 487 sq. ft. 2-car garage, including a 1,152 sq. ft. 2nd Unit with a detached 400 sq. ft. carport, on an existing 22,337 sq. ft. legal parcel (COC PLN2015-00444) and "After-the-Fact" staff level Coastal Development Permit (CDP) for removal of 17 significant trees, in order to resolve VIO2016-00141. Only minor grading is proposed. Seventeen (17) existing significant trees are proposed for removal. The project is not appealable to the California Coastal Commission.
PLN2016-00346	4.7E+07	Agency Referrals	8/24/2016	0 OBISPO RD, EL GRANADA, CA 94019	EL GRANADA	CDP, Design Review, Use Permit, Variance & Grading Permit to construct a new 12,340 SF fire station on a vacant legal parcel (PLN2015-00019), along with a Subdivision to split the 2.5-acre parcel along the C-1 & EO zoning boundary line. Project includes for 10,310 cy of grading (10,150 cy of cut & 160 cy of fill) & removal of 7 trees. Coastside Fire Protection District is acting as lead agency for the EIR. This project relocates existing fire station at 531 Obispo Rd.
PLN2016-00429	3.7E+07	Project Analysis	2/10/2017	Marine BLVD, Moss Beach, CA	MOSS BEACH	Coastside Design Review & CDP for new 1824 sq/ft SFD on a 3,800 sq/ft parcel. Project does not require a non-conforming use permit because the parcel exceeds the 3,500 sq/ft threshold as stipulated by Sect. 6133(3)(b)(1)(a). Parcel is legal pursuant to recorded COC (PLN2014-00140).
PLN2016-00525	4.7E+07	Agency Referrals	4/21/2017	155 BROADWAY, EL GRANADA, CA	PRINCETON	CDP & Use Permit for the HMB Distillery. The Distillery already has a UP to operate at a different location, but they are proposing to move to another location in Princeton. This is a change of use for this new location & an intensification of use, thus requiring a new UP & CDP. Project qualifies for a Use Permit in the CCR zoning district because they do limited indoor sales during tasting tours.
PLN2017-00154	3.6E+07	Submitted	4/20/2017	George St @ Birch St., Montara	MONTARA	Coastside Design Review & CDX for a new 3,300 sq/ft SFD with attached garage on a legal 6,249 sq/ft parcel (COC recorded; PLN2017-00020).
