I understand your concern. The removal of material is not the concern at this point. However, given that at least the last two placements of dredge material were not permitted (by the CCC), and due to the sub-80% sand content in the proposed dredge material, the selected placement site may be inappropriate and other sites (including underwater nearshore sites or inland disposal sites) may be more appropriate. While the District considers the Perch Beach site a designated dredge material disposal site, that is not our baseline understanding of this site and it has not been designated as such a site by the Commission. Our baseline is defined by permitted development. It is possible that our review of this project may include removal of material placed in 1998 and 2006 and restoration of that beach area. I will contact Dave soon to further discuss our concerns and other information we might need.

Thank you for your continued patience. Sincerely,

Nick Dreher

Nick,

Can you please tell me – briefly of course – what seems to be the difficulty. After all, we have provided all requested and required information by all concerned agencies, the project itself is a straightforward dredge/disposal in the same manner as the previous two episodes in the same locations, and we are facing a potential situation in which we – and you – can soon be deluged by hundreds of angry boaters demanding use of the launch ramp and wondering why it is still not dredged. Hence my concern.

Hello Peter,

We continue to review this project. I do not have a set hearing date yet. I will contact Dave soon regarding his most recent submission.

Sincerely,

Nick Dreher

Nick,

Any word yet on when we might expect our permit for the Pillar Point launch ramp dredging?

Peter Grenell
