As an output of the first COVID-19 Learning Community workshop, we identified patient and caregiver priority areas related to the COVID-19 Pandemic. Workshop participants and our larger patient network were then asked to rank these priorities via online survey. The resulting top six priorities are highlighted below and include topics focused on general societal impacts and individual or community impacts.

1st: Burden on health systems
2nd: Impact on health care workers
3rd: Vaccine information
4th: Mistrust and misinformation
5th: Financial impacts
6th: Care disruptions and delays

Are you a researcher exploring these areas or patient interested in engaging with us around these topics? If so, please contact us.
