WASHINGTON, July 6, 2016 /PRNewswire-USNewswire/ -- The Automotive Information Sharing and Analysis Center (Auto-ISAC) welcomes DENSO, AT&T, Infineon Technologies, and Magna International as original equipment supplier members. The four new members are a product of Auto-ISAC's continued efforts to promote collaboration between Tier 1 suppliers and automobile manufacturers around vehicle cybersecurity.

"We look forward to working with Denso, AT&T, Infineon Technologies, and Magna to advance vehicle cybersecurity protections," said Jeff Massimilla of General Motors, who serves as the organization's Vice Chair. "Suppliers play a critical role in the design and engineering of secure connected vehicles. The addition of these four new members will help Auto-ISAC continue to support the industry's proactive efforts to incorporate strong security measures into every phase of vehicle development."

Auto-ISAC was formed in July 2015 in a collective effort by the auto industry to establish a secure platform for sharing, tracking and analyzing intelligence about cyber threats and potential vulnerabilities. Auto-ISAC operates as a central hub that allows members to anonymously submit and receive information to help them more effectively counter cyber threats in real time. Currently, Auto-ISAC members account for more than 99 percent of light-duty vehicles on the road in North America.

About Infineon Technologies:

As a global market leader in the automotive sector, with more than 40 years of experience; and market leading security microcontrollers for 15 years, Infineon offers a broad portfolio of security solutions for the automotive market place. The product range includes hardware components, such as ASIL-D capable 32-bit microcontrollers with embedded Hardware Security Modules, SIM cards, and secure elements and related software. This permits the security levels to be tailored precisely to the protection needs of a vehicle ECU. Customers benefit from decades of experience in the analysis of threat and attack scenarios by virtue of security certifications and the extensive portfolio of hardware and software patents. Infineon consistently relies on proven standards, such as AES-128, ECC-256, RSA, SHE, EVITA, HSM and TPM, to minimize the risk OEMs and their customers face, in this newest frontier for Cybersecurity.
